Tacoma, Wash. The city is the seat of the University of Puget Sound (M. E.), Pacific University (Luth.), Whitworth College (Presb.), Annie Wright Seminary (P. E.), Academy of the Visitation (R. C.), Paddock Memorial, St. Joseph's, and other hospitals, the Ferry Museum of Art, and has an assessed property valuation of over \$70,000,000. Tacoma was settled in 1868, made the terminus of the Northern Pacific railroad in 1873, selected as county-seat in 1880, incorporated as a city in 1883. Pop. (1900), 37,714; (1910) 83,743.

Taft, ALPHONSO, jurist; born in Townshend, Vt., Nov. 5, 1810; graduated at Yale College; admitted to the bar in 1838; judge of the Superior Court of Cincinnati in 1866-72; Secretary of War in March, 1876, and in May of the same year was transferred to the Attorney-Generalship, serving till March, 1877; was United States minister to Austria in 1882-84; was then transferred to Russia, where he served one year. He died in San Diego, Cal., May 21, 1891.

Taft, LORADO, sculptor; born in Elmwood, Ill., April 29, 1860; graduated at the University of Illinois in 1879; student at the Ecole des Beaux Arts, Paris, in 1880-83; instructor at the Chicago Art Institute since 1886; and lecturer on art in the University of Chicago since 1893. Author of *The History of American Sculpture*, etc.

TAFT, WILLIAM HOWARD

Taft, WILLIAM HOWARD, born in Cincinnati, O., Sept. 15, 1857; son of Alphonso Taft; graduated at Woodward High School, 1874; at Yale, 1878; second in the class of 121 members; and at Cincinnati College Law School in 1880; admitted to the bar, 1880; assistant prosecuting attorney, 1881-82; collector of internal revenue, 1882-83; assistant county solicitor, 1885-87; U. S. circuit judge, 1892-1900; president of the Philippine Commission, 1900-01; first civil governor of the Philippines, 1901-04; special agent to the Pope in reference to friars' lands in the Philippines; Secretary of War, 1904-08; provisional governor of Cuba, 1907; elected President, 1908; renominated 1912.

Mr. Taft's ambition for years was to sit on the bench of the Supreme Court of the United States. He told the President that he would rather wear the robe of a Supreme Court justice than be President of the United States. Although several occasions offered, he put aside his ambition so as to serve the country as a diplomatic and political representative, as his record above given shows. His views as to the tariff were declared in his speech at Bath, Maine, in September, 1906: "I believe that since the passage of the Dingley bill there has been a change in the business conditions of the country, making it wise and just to revise the schedules of the existent tariff." Further, in an interview published

TAFT, WILLIAM HOWARD

in *The Outlook*, in March, 1912, he said: "I should like to have the people of the United States pass their deliberate judgment on the issue as it has been made up within the last year—the difference between the common-sense way and the haphazard way of making a tariff law. I am a believer in the Republican policy of protection. I want to see it continued, but I also want to see our party strengthen it by giving it an underpinning which cannot be swept away by the first passing flood of popular sentiment. This could be accomplished by fixing the rates at figures not dictated by a group of domestic producers for their own enrichment, but based on the differences between the cost of production here and abroad, and by establishing the machinery for collecting the data of cost, so that it can be in continuous operation and its work more easily done."

National Republican Convention of 1912.—The campaign for the Republican nomination in 1912 was especially characterized by the advent of former President Roosevelt in the field, the extended speaking tours of the former and present Presidents, and the bitterness of their arraignment of each other. Mr. Roosevelt had several times declared that under no circumstances would he be a candidate for another term in the Presidential office, yet as the time for the meeting of the national convention drew near he practically demanded the nomination as the only means of saving both the country and the Republican party. The preferential primaries throughout the country had given him a sufficient number of delegates to warrant the belief that he would receive the nomination on at least the second ballot, but the committee on credentials, after hearing the various contests, decided against the seating of many Roosevelt delegates; and the adoption of the committee's report by the convention revealed a Taft maximum strength of 605 and a minimum of 542, and a Roosevelt maximum of 529 and minimum of 464. When the permanent roll containing the names of contested delegates was approved, the Roosevelt following revolted and issued a statement in behalf of their favorite, asking that his name be not presented as a candidate for the nomination and that his delegates sit in mute protest against all

further proceedings. A great majority of the Roosevelt delegates in the Illinois and all in the Missouri and Idaho delegations declined to follow this advice, and declared their intention of carrying out their primary instructions.

The first test vote after the issue of the Roosevelt statement came on the adoption of the party platform, revealing an affirmative vote of 666, a negative vote of 53, and Roosevelt delegates present and not voting, 343.

Immediately after the renomination of both President Taft and Vice-President Sherman the Roosevelt delegates with those to whom seats in the convention had been refused joined in a public meeting and placed their favorite in nomination, preparatory to the organization of representative bodies in all the States by which a new national party of Progressive elements would be created in time for active participation in the ensuing campaign and election.

Trust Problems.—On Dec. 5, 1911, President Taft sent a special message to both Houses of Congress in which he defended the SHERMAN ANTI-TRUST LAW (*q. v.*), recommended a federal incorporation law, and suggested further legislation for the purpose of more clearly defining methods of competition that are in restraint of trade. The full text of the message follows:

To the Senate and House of Representatives:

This message is the first of several which I shall send to Congress during the interval between the opening of its regular session and its adjournment for the Christmas holidays. The amount of information to be communicated as to the operations of the government, the number of important subjects calling for comment by the Executive and the transmission to Congress of exhaustive reports of special commissions, make it impossible to include in one message of a reasonable length a discussion of the topics that ought to be brought to the attention of the national Legislature.

The Supreme Court Decisions.—In May last the Supreme Court handed down decisions in the suits in equity brought by the United States to enjoin the further maintenance of the Standard Oil Trust

TAFT, WILLIAM HOWARD

and of the American Tobacco Trust and to secure their dissolution. The decisions are epoch-making and serve to advise the business world authoritatively of the scope and operation of the anti-trust act of 1890. The decisions do not depart in any substantial way from the previous decisions of the court in construing and applying this important statute, but they clarify those decisions by further defining the already admitted exceptions to the literal construction of the act. By the decrees they furnish a useful precedent as to the proper method of dealing with the capital and property of illegal trusts. These decisions suggest the need and wisdom of additional or supplemental legislation to make it easier for the entire business community to square with the rule of action and legality thus finally established and to preserve the benefit, freedom, and spur of reasonable competition without loss of real efficiency or progress.

No Change in Rule of Decision.—The statute in its first section declares to be illegal "every contract, combination in the form of trust or otherwise, or conspiracy, in restraint of trade or commerce among the several States or with foreign nations," and in the second declares guilty of a misdemeanor "every person who shall monopolize or attempt to monopolize or combine or conspire with any other person to monopolize any part of the trade or commerce of the several States or with foreign nations."

In two early cases, where the statute was invoked to enjoin a transportation-rate agreement between interstate railroad companies, it was held that it was no defence to show that the agreement as to rates complained of was reasonable at common law, because it was said that the statute was directed against all contracts and combinations in restraint of trade, whether reasonable at common law or not. It was plain from the record, however, that the contracts complained of in those cases would not have been deemed reasonable at common law. In subsequent cases the Court said that the statute should be given a reasonable construction, and refused to include within its inhibition certain contractual restraints of trade which it denominated as incidental or as indirect.

These cases of restraint of trade that the court excepted from the operation of the statute were instances which, at common law, would have been called reasonable. In the Standard Oil and Tobacco cases, therefore, the court merely adopted the tests of the common law, and in defining exceptions to the literal application of the statute only substituted for the test of being incidental or indirect that of being reasonable, and this without varying in the slightest the actual scope and effect of the statute. In other words, all the cases under the statute which have now been decided would have been decided the same way if the court had originally accepted in its construction the rule at common law.

It has been said that the court, by introducing into the construction of the statute common-law distinctions, has emasculated it. This is obviously untrue. By its judgment every contract and combination in restraint of interstate trade made with the purpose or necessary effect of controlling prices by stifling competition or of establishing in whole or in part a monopoly of such trade, is condemned by the statute. The most extreme critics cannot instance a case that ought to be condemned under the statute which is not brought within its terms as thus construed.

The suggestion is also made that the Supreme Court by its decision in the last two cases has committed to the Court the undefined and unlimited discretion to determine whether a case of restraint of trade is within the terms of the statute. This is wholly untrue. A reasonable restraint of trade at common law is well understood and is clearly defined. It does not rest in the discretion of the court. It must be limited to accomplish the purpose of a lawful main contract to which, in order that it shall be enforceable at all, it must be incidental. If it exceed the needs of that contract it is void.

The test of reasonableness was never applied by the court at common law to contracts or combinations or conspiracies, in restraint of trade whose purpose was, or whose necessary effect would be, to stifle competition, to control prices, or establish monopolies. The courts never assumed power to say that such contracts

TAFT, WILLIAM HOWARD

or combinations or conspiracies might be lawful if the parties to them were only moderate in the use of the power thus secured and did not exact from the public too great and exorbitant prices. It is true that many theorists and others engaged in business violating the statute have hoped that some such line could be drawn by courts; but no court of authority has ever attempted it. Certainly there is nothing in the decisions of the latest two cases from which such a dangerous theory of judicial discretion in enforcing this statute can derive the slightest sanction.

A Matter of Growth.—We have been twenty-one years making this statute effective for the purposes for which it was enacted. The Knight case was discouraging and seemed to remit to the States the whole available power to attack and suppress the evils of the trusts. Slowly, however, the error of that judgment was corrected, and only in the last three or four years has the heavy hand of the law been laid upon the great illegal combinations that have exercised such an absolute dominion over many of our industries. Criminal prosecutions have been brought and a number are pending, but juries have felt averse to convicting for jail sentences, and judges have been most reluctant to impose such sentences on men of respectable standing in society whose offence has been regarded as merely statutory. Still, as the offence becomes better understood and the committing of it partakes more of studied and deliberate defiance of the law, we can be confident that juries will convict individuals and that jail sentences will be imposed.

The Remedy by Dissolution.—In the Standard Oil case the Supreme and Circuit Courts found the combination to be refining, transporting, and marketing petroleum and its products, effected and maintained through thirty-seven different corporations, the stock of which was held by a New Jersey company. It in effect commanded the dissolution of this combination, directed the transfer and pro rata distribution by the New Jersey company of the stock held by it in the thirty-seven corporations to and among its stockholders; and the corporations and in-

dividual defendants were enjoined from conspiring or combining to restore such monopoly; and all agreements between the subsidiary corporations tending to produce or bring about further violations of the act were enjoined.

In the tobacco case the court found that the individual defendants, twenty-nine in number, had been engaged in a successful effort to acquire complete dominion over the manufacture, sale, and distribution of tobacco in this country and abroad, and that this had been done by combinations made with a purpose and effect to stifle competition, control prices, and establish a monopoly not only in the manufacture of tobacco, but also of tinfoil and licorice used in its manufacture and of its products of cigars, cigarettes and snuffs. The tobacco suit presented a far more complicated and difficult case than the Standard Oil suit for a decree which would effectuate the will of the court and end the violation of the statute. There was here no single holding company as in the case of the Standard Oil Trust. The main company was the American Tobacco Company, a manufacturing, selling, and holding company. The plan adopted to destroy the combination and restore competition involved the redivision of the capital and plants of the whole trust between some of the companies constituting the trust and new companies organized for the purpose of the decree and made parties to it, and numbering, new and old, fourteen.

Situation after Readjustment.—The American Tobacco Company (old), readjusted capital, \$92,000,000; the Liggett & Meyers Tobacco Company (new), capital, \$67,000,000; the P. Lorillard Company (new), capital, \$47,000,000, and the R. J. Reynolds Tobacco Company (old), capital, \$7,525,000, are chiefly engaged in the manufacture and sale of chewing and smoking tobacco and cigars. The former one tinfoil company is divided into two, one of \$825,000 capital, and the other of \$400,000. The one snuff company is divided into three companies, one with a capital of \$15,000,000, another with a capital of \$8,000,000, and a third with a capital of \$8,000,000. The licorice companies are two, one with a capital of \$5,758,300 and another with a capital of

TAFT, WILLIAM HOWARD

\$2,000,000. There are also the British-American Tobacco Company, a British corporation, doing business abroad, with a capital of \$26,000,000; the Porto Rican Tobacco Company, with a capital of \$1,800,000, and the corporation of United Cigar Stores, with a capital of \$9,000,000.

Under this arrangement each of the different kinds of business will be distributed between two or more companies with a division of the prominent brands in the same tobacco products, so as to make competition not only possible, but necessary. Thus the smoking-tobacco business of the country is divided so that the present independent companies have 21.39 per cent., while the American Tobacco Company will have 33.08 per cent., the Liggett & Meyers 20.05 per cent., the Lorillard Company 22.82 per cent., and the Reynolds Company 2.66 per cent. The stock of the other thirteen companies, both preferred and common, has been taken from the defendant American Tobacco Company and has been distributed among its stockholders. All covenants restricting competition have been declared null and further performance of them has been enjoined. The preferred stock of the different companies has now been given voting power, which was denied it under the old organization. The ratio of the preferred stock to the common was as 78 to 40. This constitutes a very decided change in the character of the ownership and control of each company.

In the original suit there were twenty-nine defendants who were charged with being the conspirators through whom the illegal combination acquired and exercised its unlawful dominion. Under the decree these defendants will hold amounts of stock in the various distributee companies ranging from 41 per cent, as a maximum to 28½ per cent. as a minimum, except in the case of one small company, the Porto Rican Tobacco Company, in which they will hold 45 per cent. The twenty-nine individual defendants are enjoined for three years from buying any stock except from each other, and the group is thus prevented from extending its control during that period. All parties to the suit, and the new companies who are made parties, are enjoined perpetually

from in any way effecting any combination between any of the companies in violation of the statute by way of resumption of the old trust. Each of the fourteen companies is enjoined from acquiring stock in any of the others. All these companies are enjoined from having common directors or officers, or common buying or selling agents, or common offices, or lending money to each other.

Size of New Companies.—Objection was made by certain independent tobacco companies that this settlement was unjust because it left companies with very large capital in active business, and that the settlement that would be effective to put all on an equality would be a division of the capital and plant of the trust into small fractions in amount more nearly equal to that of each of the independent companies. This contention results from a misunderstanding of the anti-trust law and its purpose. It is not intended thereby to prevent the accumulation of large capital in business enterprises in which such a combination can secure reduced cost of production, sale, and distribution. It is directed against such an aggregation of capital only when its purpose is that of stifling competition, enhancing or controlling prices, and establishing a monopoly. If we shall have by the decree defeated these purposes and restored competition between the large units into which the capital and plant have been divided, we shall have accomplished the useful purpose of the statute.

Confiscation not the Purpose.—It is not the purpose of the statute to confiscate the property and capital of the offending trusts. Methods of punishment by fine or imprisonment of the individual offenders, by fine of the corporation or by forfeiture of its goods in transportation, are provided, but the proceeding in equity is a specific remedy to stop the operation of the trust by injunction and prevent the future use of the plant and capital in violation of the statute.

Effectiveness of Decree.—I venture to say that not in the history of American law has a decree more effective for such a purpose been entered by a court than that against the Tobacco Trust. As Circuit Judge Noyes said in his judgment approving the decree:

TAFT, WILLIAM HOWARD

"The extent to which it has been necessary to tear apart this combination and force it into new forms, with the attendant burdens, ought to demonstrate that the federal anti-trust statute is a drastic statute which accomplishes effective results; which so long as it stands on the statute books must be obeyed, and which cannot be disobeyed without incurring far-reaching penalties. And, on the other hand, the successful reconstruction of this organization should teach that the effect of enforcing this statute is not to destroy, but to reconstruct; not to demolish, but to recreate in accordance with the conditions which the Congress has declared shall exist among the people of the United States."

Common Stock Ownership.—It has been assumed that the present pro rata and common ownership in all these companies by former stockholders of the trust would insure a continuance of the same old single control of all the companies into which the trust has by decree been disintegrated. This is erroneous and is based upon the assumed inefficiency and innocuousness of judicial injunctions. The companies are enjoined from co-operation or combination; they have different managers, directors, purchasing and sales agents. If all or many of the numerous stockholders, reaching into the thousands, attempt to secure concerted action of the companies with a view to the control of the market, their number is so large that such an attempt could not well be concealed, and its prime movers and all its participants would be at once subject to contempt proceedings and imprisonment of a summary character. The immediate result of the present situation will necessarily be activity by all the companies under different managers, and then competition must follow, or there will be activity by one company and stagnation by another. Only a short time will inevitably lead to change in ownership of the stock, as all opportunity for continued co-operation must disappear. Those critics who speak of this disintegration in the trust as a mere change of garments have not given consideration to the inevitable working of the decree and understand little the personal danger of attempting to evade or set at naught the

solemn injunction of a court whose object is made plain by the decree and whose inhibitions are set forth with a detail and comprehensiveness unexampled in the history of equity jurisprudence.

Other Voluntary Reorganizations at Hand.—The effect of these two decisions has led to decrees dissolving the combination of manufacturers of electric lamps, a Southern wholesale grocers' association, an interlocutory decree against the Powder Trust, with directions by the Circuit Court compelling dissolution, and other combinations of a similar history are now negotiating with the Department of Justice looking to a disintegration by decree and reorganization in accordance with law. It seems possible to bring about these reorganizations without general business disturbance.

Movement for Repeal of Law.—But now that the anti-trust act is seen to be effective for the accomplishment of the purpose of its enactment we are met by a cry from many different quarters for its repeal. It is said to be obstructive of business progress, to be an attempt to restore old-fashioned methods of destructive competition between small units and to make impossible those useful combinations of capital and the reduction of the cost of production that are essential to continued prosperity and normal growth.

In the recent decisions the Supreme Court makes clear that there is nothing in the statute which condemns combinations of capital or mere bigness of plant organized to secure economy in production and a reduction of its cost. It is only when the purpose or necessary effect of the organization and maintenance of the combination or the aggregation of immense size is the stifling of competition, actual and potential, and the enhancing of prices and establishing a monopoly, that the statute is violated. Mere size is no sin against the law. The merging of two or more business plants necessarily eliminates competition between the units thus combined, but this elimination is in contravention of the statute only when the combination is made for purpose of ending this particular competition in order to secure control of and enhance prices, and create a monopoly.

Lack of Definiteness in Statute.—The

TAFT, WILLIAM HOWARD

complaint is made of the statute that it is not sufficiently definite in its description of that which is forbidden to enable business men to avoid its violation. The suggestion is that we may have a combination of two corporations which may run on for years and that subsequently the Attorney-General may conclude that it was a violation of the statute, and that which was supposed by the combiners to be innocent then turns out to be a combination in violation of the statute. The answer to this hypothetical case is that when men attempt to amass such stupendous capital as will enable them to suppress competition, control prices, and establish a monopoly they know the purpose of their acts. Men do not do such a thing without having it clearly in mind. If what they do is merely for the purpose of reducing the cost of production, without the thought of suppressing competition by use of the bigness of the plant they are creating, then they cannot be convicted at the time the union is made; nor can they be convicted later, unless it happen that later on they conclude to suppress competition and take the usual methods for doing so, and thus establish for themselves a monopoly. They can, in such a case, hardly complain if the motive which subsequently is disclosed is attributed by the court to the original combination.

New Remedies Suggested.—Much is said of the repeal of this statute and of constructive legislation intended to accomplish the purpose and blaze a clear path for honest merchants and business men to follow. It may be that such a plan will be evolved, but I submit that the discussions which have been brought out in recent days by the fear of the continued execution of the anti-trust law have produced nothing but glittering generalities and have offered no line of distinction or rule of action as definite and as clear as that which the Supreme Court itself lays down in enforcing the statute.

Supplemental Legislation Needed.—I see no objection; and indeed I can see decided advantages—in the enactment of a law which shall describe and denounce methods of competition which are unfair and are badges of the unlawful purpose denounced in the anti-trust law. The attempt and purpose to suppress a competi-

tor by underselling him at a price so unprofitable as to drive him out of business, or the making of exclusive contracts with customers under which they are required to give up association with other manufacturers, and numerous kindred methods for stifling competition and effecting monopoly, should be described with sufficient accuracy in a criminal statute, on the one hand, to enable the government to shorten its task by prosecuting single misdemeanors instead of an entire conspiracy, and, on the other hand, to serve the purpose of pointing out more in detail to the business community what must be avoided.

In a special message to Congress on January 7, 1910, I ventured to point out the disturbance to business that would probably attend the dissolution of these offending trusts. I said:

“But such an investigation and possible prosecution of corporations whose prosperity or destruction affects the comfort not only of stockholders, but of millions of wage-earners, employes, and associated tradesmen must necessarily tend to disturb the confidence of the business community, to dry up the now flowing sources of capital from its places of hoarding, and produce a halt in our present prosperity that will cause suffering and strained circumstances among the innocent many for the faults of the guilty few. The question which I wish in this message to bring clearly to the consideration and discussion of Congress is whether, in order to avoid such a possible business danger, something cannot be done by which these business combinations may be offered a means, without great financial disturbance, of changing the character, organization, and extent of their business into one within the lines of the law under federal control and supervision, securing compliance with the anti-trust statute.

Generally in the industrial combinations called “trusts” the principal business is the sale of goods in many States and in foreign markets; in other words, the interstate and foreign business far exceeds the business done in any one State. This fact will justify the federal government in granting a federal charter to such a combination to make and sell in interstate and foreign commerce the products

TAFT, WILLIAM HOWARD

of useful manufacture under such limitations as will secure a compliance with the anti-trust law. It is possible so to frame a statute that, while it offers protection to a federal company against harmful, vexatious, and unnecessary invasion by the States, it shall subject it to reasonable taxation and control by the States with respect to its purely local business. . . .

Corporations organized under this act should be prohibited from acquiring and holding stock in other corporations (except for special reasons, upon approval by the proper federal authority), thus avoiding the creation under national auspices of the holding company with subordinate corporations in different States, which has been such an effective agency in the creation of the great trusts and monopolies.

If the prohibition of the anti-trust act against combinations in restraint of trade is to be effectively enforced, it is essential that the national government shall provide for the creation of national corporations to carry on a legitimate business throughout the United States. The conflicting laws of the different States of the Union with respect to foreign corporations make it difficult, if not impossible, for one corporation to comply with their requirements so as to carry on business in a number of different States.

I renew the recommendation of the enactment of a general law providing for the voluntary formation of corporations to engage in trade and commerce among the States and with foreign nations. Every argument which was then advanced for such a law, and every explanation which was at that time offered to possible objections, have been confirmed by our experience since the enforcement of the anti-trust statute has resulted in the actual dissolution of active commercial organizations.

It is even more manifest now than it was then that the denunciation of conspiracies in restraint of trade should not and does not mean the denial of organizations large enough to be intrusted with our interstate and foreign trade. It has been made more clear now than it was then that a purely negative statute like the anti-trust law may well be supplemented by specific provisions for the build-

ing up and regulation of legitimate national and foreign commerce.

Experts Needed to Aid Courts.—The drafting of the decrees in the dissolution of the present trusts, with a view to their reorganization into legitimate corporations, has made it especially apparent that the courts are not provided with the administrative machinery to make the necessary inquiries preparatory to reorganization or to pursue such inquiries, and they should be empowered to invoke the aid of the Bureau of Corporations in determining the suitable reorganization of the disintegrated parts. The Circuit Court and the Attorney-General were greatly aided in framing the decree in the Tobacco Trust dissolution by an expert from the Bureau of Corporations.

I do not set forth in detail the terms and sections of a statute which might supply the constructive legislation permitting and aiding the formation of combinations of capital into federal corporations. They should be subject to rigid rules as to their organization and procedure, including effective publicity, and to the closest supervision as to the issue of stock and bonds by an executive bureau or commission in the Department of Commerce and Labor, to which in times of doubt they might well submit their proposed plans for future business. It must be distinctly understood that incorporation under a federal law could not exempt the company thus formed and its incorporators and managers from prosecution under the anti-trust law for subsequent illegal conduct, but the publicity of its procedure and the opportunity for frequent consultation with the bureau or commission in charge of the incorporation as to the legitimate purpose of its transactions would offer it as great security against successful prosecutions for violations of the law as would be practical or wise.

Such a bureau or commission might well be invested also with the duty already referred to, of aiding courts in the dissolution and recreation of trusts, within the law. It should be an executive tribunal of the dignity and power of the Controller of the Currency or the Interstate Commerce Commission, which now exercise supervisory power over important

TAFT, WILLIAM HOWARD

classes of corporations under federal regulation.

The drafting of such a federal incorporation law would offer ample opportunity to prevent many manifest evils in corporate management to-day, including irresponsibility of control in the hands of the few who are not the real owners.

Incorporation Voluntary.—I recommend that the federal charters thus to be granted shall be voluntary, at least until experience justifies mandatory provisions. The benefit to be derived from the operation of great businesses under the protection of such a charter would attract all who are anxious to keep within the lines of the law. Other large combinations that fail to take advantage of the federal incorporation will not have a right to complain if their failure is ascribed to unwillingness to submit their transactions to the careful official scrutiny, competent supervision, and publicity attendant upon the employment of such a charter.

Only Supplemental Legislation.—The opportunity thus suggested for federal incorporation, it seems to me, is suitable constructive legislation needed to facilitate the squaring of great industrial enterprises to the rule of action laid down by the anti-trust law. This statute as construed by the Supreme Court must continue to be the line of distinction for legitimate business. It must be enforced unless we are to banish individualism from all business and reduce it to one common system of regulation or control of prices like that which now prevails with respect to public utilities, and which when applied to all business would be a long step toward State socialism.

Importance of Anti-Trust Act.—The anti-trust act is the expression of the effort of a freedom-loving people to preserve equality of opportunity. It is the result of the confident determination of such a people to maintain their future growth by preserving uncontrolled and unrestricted the enterprise of the individual, his industry, his ingenuity, his intelligence and his independent courage.

For twenty years or more this statute has been upon the statute-book. All knew its general purpose and approved. Many of its violators were cynical over its assumed impotence. It seemed impossible

of enforcement. Slowly the mills of the courts ground, and only gradually did the majesty of the law assert itself. Many of its statesmen-authors died before it became a living force, and they and others saw the evil grow which they had hoped to destroy. Now its efficacy is seen; now its power is heavy; now its object is near achievement. Now we hear the call for its repeal on the plea that it interferes with business prosperity, and we are advised in most general terms how by some other statute and in some other way the evil we are just stamping out can be cured, if we only abandon this work of twenty years and try another experiment for another term of years.

It is said that the act has not done good. Can this be said in the face of the effect of the Northern Securities decree? That decree was in no way so drastic or inhibitive in detail as either the Standard Oil decree or the Tobacco decree; but did it not stop for all time the then powerful movement toward the control of all the railroads of the country in a single hand? Such a one-man power could not have been a healthful influence in the Republic, even though exercised under the general supervision of an interstate commission.

Do we desire to make such ruthless combination and monopolies lawful? When all energies are directed, not towards the reduction of the cost of production for the public benefit by a healthful competition, but towards new ways and means for making permanent in a few hands the absolute control of the conditions and prices prevailing in the whole field of industry, then individual enterprise and effort will be paralyzed and the spirit of commercial freedom will be dead.

Accompanying the message was a list of the various suits instituted by the government under the Sherman law since 1889, which will be found under TRUST PROSECUTIONS.

Foreign Relations.—It is a time-honored custom of Presidents of the United States to send to the Congress at the close of their administrations or at intervening periods, as circumstances might warrant, a message detailing, as far as

TAFT, WILLIAM HOWARD

public policy would permit, the condition of our relations with other countries. Following this informing custom, President Taft sent a message under date of Dec. 7, 1911, of which the subjoined is a summary, setting forth the various international happenings in which the United States bore a part or had an interest, practically to the close of that year:

To the Senate and House of Representatives:

The relations of the United States with other countries have continued during the past twelve months upon a basis of the usual good-will and friendly intercourse.

The year just past marks an important general movement on the part of the powers for broader arbitration. In the recognition of the manifold benefits to mankind in the extension of the policy of the settlement of international disputes by arbitration rather than by war, and in response to a wide-spread demand for an advance in that direction on the part of the people of the United States and of Great Britain and of France, new arbitration treaties were negotiated last spring with Great Britain and France, the terms of which were designed, as expressed in the preamble of these treaties, to extend the scope and obligations of the policy of arbitration adopted in our present treaties with those governments. To pave the way for this treaty with the United States, Great Britain negotiated an important modification in its alliance with Japan, and the French government also expedited the negotiations with signal good-will. The new treaties have been submitted to the Senate and are awaiting its advice and consent to their ratification. All the essentials of these important treaties have long been known, and it is my earnest hope that they will receive prompt and favorable action.

Mexico.—The presence of a large military and naval force available for prompt action, near the Mexican border, proved to be most fortunate under the somewhat trying conditions presented by this invasion of American rights. Had no movement theretofore taken place, and because of these events it had been necessary then to bring about the mobilization,

it must have had sinister significance. On the other hand, the presence of the troops before and at the time of the unfortunate killing and wounding of American citizens at Douglas made clear that the restraint exercised by our government in regard to this occurrence was not due to a lack of force or power to deal with it promptly and aggressively, but was due to a real desire to use every means possible to avoid direct intervention in the affairs of our neighbors, whose friendship we valued and were most anxious to retain.

The policy and action of this government were based upon an earnest friendliness for the Mexican people as a whole, and it is a matter of gratification to note that this attitude of strict impartiality as to all factions in Mexico and of sincere friendship for the neighboring nation, without regard for party allegiance, has been generally recognized and has resulted in an even closer and more sympathetic understanding between the two republics and a warmer regard one for the other. Action to suppress violence and restore tranquillity throughout the Mexican Republic was of peculiar interest to this government, in that it concerned the safeguarding of American life and property in that country. The government of the United States had occasion to accord permission for the passage of a body of Mexican rurales through Douglas, Ariz., to Tijuana, Mexico, for the suppression of general lawlessness which had for some time existed in the region of northern Lower California. On May 25, 1911, President Diaz resigned, Señor de la Barra was chosen provisional president. Elections for president and vice-president were thereafter held throughout the republic, and Señor Francisco I. Madero was formally declared elected on Oct. 15 to the chief magistracy. On Nov. 6 President Madero entered upon the duties of his office.

General Reyes.—Since the inauguration of President Madero a plot has been unearthed against the present government, to begin a new insurrection. Pursuing the same consistent policy which this administration has adopted from the beginning, it directed an investigation into the conspiracy charged, and this inves-

TAFT, WILLIAM HOWARD

tigation has resulted in the indictment of Gen. Bernardo Reyes and others, and the seizure of a number of officers and men and horses and accoutrements assembled upon the soil of Texas for the purpose of invading Mexico. Similar proceedings had been taken during the insurrection against the Diaz government resulting in the indictment and prosecution of persons found to be engaged in violating the neutrality laws of the United States in aid of that uprising.

The record of this government in respect of the recognition of constituted authority in Mexico therefore is clear.

Chinese Loans.—The past year has been marked in our relations with China by the conclusion of two important international loans, one for the construction of the Hukuang railways, the other for the carrying out of the currency reform to which China was pledged by treaties with the United States, Great Britain, and Japan, of which mention was made in my last annual message.

It will be remembered that early in 1909 an agreement was consummated among British, French, and German financial groups whereby they proposed to lend the Chinese government funds for the construction of railways in the Provinces of Hunan and Hupeh, reserving for their nationals the privilege of engineering the construction of the lines and of furnishing the materials required for the work. After negotiations with the governments and groups concerned an agreement was reached whereby American, British, French, and German nationals should participate upon equal terms in this important and useful undertaking. Thereupon the financial groups, supported by their respective governments, began negotiations with the Chinese government which terminated in a loan to China of \$30,000,000, with the privilege of increasing the amount to \$50,000,000. The co-operative construction of these trunk lines should be of immense advantage, materially and otherwise, to China, and should greatly facilitate the development of the bountiful resources of the empire. On the other hand, a large portion of these funds is to be expended for materials, American products having equal preference with those of the other three lend-

ing nations, and as the contract provided for branches and extensions subsequently to be built on the same terms the opportunities for American materials will reach considerable proportions.

Knowing the interest of the United States in the reform of Chinese currency, the Chinese government, in the autumn of 1910 sought the assistance of the American government to procure funds with which to accomplish that all-important reform. In the course of the subsequent negotiations there was combined with the proposed currency loan one for certain industrial developments in Manchuria, the two loans aggregating the sum of \$50,000,000. While this was originally to be solely an American enterprise, the American government, consistently with its desire to secure a sympathetic and practical co-operation of the great powers towards maintaining the principle of equality of opportunity and the administrative integrity of China, urged the Chinese government to admit to participation in the currency loan the associates of the American group in the Hukuang loan. While of immense importance in itself, the reform contemplated in making this loan is but preliminary to other and more comprehensive fiscal reforms which will be of incalculable benefit to China and foreign interests alike, since they will strengthen the Chinese Empire and promote the rapid development of international trade.

When these negotiations were begun it was understood that a financial adviser was to be employed by China in connection with the reform, and in order that absolute equality in all respects among the lending nations might be scrupulously observed, the American government proposed the nomination of a neutral adviser, which was agreed to by China and the other governments concerned. On Sept. 28, 1911, Dr. Vissering, President of the Dutch Java Bank, and a financier of wide experience in the Orient, was recommended to the Chinese government for the post of monetary adviser.

New Japanese Treaty.—The treaty of commerce and navigation between the United States and Japan, signed in 1894, would by a strict interpretation of its provisions have terminated on July 17,

TAFT, WILLIAM HOWARD

1912. Japan's general treaties with the other powers, however, terminated in 1911, and the Japanese government expressed an earnest desire to conduct the negotiations for a new treaty with the United States simultaneously with its negotiations with the other powers. There were a number of important questions involved in the treaty, including the immigration of laborers, revision of the customs tariff, and the right of Americans to hold real estate in Japan. The United States consented to waive all technicalities and to enter at once upon negotiations for a new treaty on the understanding that there should be a continuance throughout the life of the treaty of the same effective measures for the restriction of immigration of laborers to American territory which had been in operation with entire satisfaction to both governments since 1908. The Japanese government accepted this basis of negotiation, and a new treaty was quickly concluded, resulting in a highly satisfactory settlement of the other questions referred to.

Europe.—In Europe and the Near East, during the past twelve-month, there has been at times considerable political unrest. The Moroccan question, which for some months was the cause of great anxiety, happily appears to have reached a stage at which it need no longer be regarded with concern. The Ottoman Empire was occupied for a period by strife in Albania and is now at war with Italy. In Greece and the Balkan countries the disquieting potentialities of this situation have been more or less felt. Persia has been the scene of a long internal struggle. These conditions have been the cause of uneasiness in European diplomacy, but thus far without direct political concern to the United States.

In the war which unhappily exists between Italy and Turkey this government has no direct political interest, and I took occasion at the suitable time to issue a proclamation of neutrality in that conflict. At the same time all necessary steps have been taken to safeguard the personal interests of American citizens and organizations in so far as affected by the war.

In spite of the attendant economic uncertainties and detriments to commerce

the United States has gained markedly in its commercial standing with certain of the nations of the Near East. Turkey, especially, is beginning to come into closer relations with the United States through the new interest of American manufacturers and exporters in the possibilities of those regions, and it is hoped that foundations are being laid for a large and mutually beneficial exchange of commodities between the two countries. This new interest of Turkey in American goods is indicated by the fact that a party of prominent merchants from a large city in Turkey recently visited the United States to study conditions of manufacture and export here, and to get into personal touch with American merchants with a view to co-operating more intelligently in opening up the markets of Turkey and the adjacent countries to our manufactures. Another indication of this new interest of America in the commerce of the Near East is the recent visit of a large party of American merchants and manufacturers to central and eastern Europe, where they were entertained by prominent officials and organizations of the large cities, and new bonds of friendship and understanding were established which cannot but lead to closer and greater commercial interchange.

Fur-Seal Treaty.—The fur-seal controversy, which for nearly twenty-five years has been the source of serious friction between the United States and the powers bordering upon the North Pacific Ocean, whose subjects have been permitted to engage in pelagic sealing against the fur-seal herds having their breeding grounds within the jurisdiction of the United States, has at last been satisfactorily adjusted by the conclusion of the North Pacific sealing convention entered into between the United States, Great Britain, Japan, and Russia on July 7, 1910. This convention is a conservation measure of very great importance, and if it is carried out in the spirit of reciprocal concession and advantage upon which it is based there is every reason to believe that not only will it result in preserving the fur-seal herds of the North Pacific Ocean and restoring them to their former value for the purposes of commerce, but also that it will afford a permanently satis-

TAFT, WILLIAM HOWARD

factory settlement of a question, the only other solution of which seemed to be the total destruction of the fur seals. In another aspect, also, this convention is of importance in that it furnishes an illustration of the feasibility of securing a general international game law for the protection of other mammals of the sea, the preservation of which is of importance to all the nations of the world.

The attention of Congress is especially called to the necessity for legislation on the part of the United States for the purpose of fulfilling the obligations assumed under this convention, to which the Senate gave its advice and consent on July 24, 1911.

Opium Commission.—In a special message transmitted to the Congress on Jan. 7, 1911, in which I concurred in the recommendations made by the Secretary of State in regard to certain needful legislation for the control of our interstate and foreign traffic in opium and other menacing drugs, I quoted from my annual message of Dec. 7, 1909, in which I announced that the results of the International Opium Commission held at Shanghai in February, 1909, at the invitation of the United States, had been laid before this government; that the report of that commission showed that China was making remarkable progress and admirable efforts towards the eradication of the opium evil; that the interested governments had not permitted their commercial interests to prevent their co-operation in this reform; and, as a result of collateral investigations of the opium question in this country, I recommended that the manufacture, sale, and use of opium in the United States should be more rigorously controlled by legislation.

Foreign Trade Relations.—In my last annual message I referred to the tariff negotiations of the Department of State with foreign countries in connection with the application, by a series of proclamations, of the minimum tariff of the United States to importations from the several countries, and I stated that, in its general operation, Section 2 of the new tariff law had proved a guarantee of continued commercial peace, although there were, unfortunately, instances where foreign governments dealt arbitrarily with Ameri-

can interests within their jurisdiction in a manner injurious and inequitable. During the past year some instances of discriminatory treatment have been removed, but I regret to say that there remain a few cases of differential treatment adverse to the commerce of the United States. While none of these instances now appears to amount to undue discrimination in the sense of Section 2 of the tariff law of Aug. 5, 1909, they are all exceptions to that complete degree of equality of tariff treatment that the Department of State has consistently sought to obtain for American commerce abroad.

While the double tariff feature of the tariff law of 1909 has been amply justified by the results achieved in removing former and preventing new undue discriminations against American commerce, it is believed that the time has come for the amendment of this feature of the law in such a way as to provide a graduated means of meeting varying degrees of discriminatory treatment of American commerce in foreign countries as well as to protect the financial interests abroad of American citizens against arbitrary and injurious treatment on the part of foreign governments through either legislative or administrative measures.

It would also seem desirable that the maximum tariff of the United States should embrace within its purview the free list, which is not the case at the present time, in order that it might have reasonable significance to the governments of those countries from which the importations into the United States are confined virtually to articles on the free list.

American Merchant Marine.—I need hardly reiterate the conviction that there should speedily be built up an American merchant marine. This is necessary to assure favorable transportation facilities to our great ocean-borne commerce as well as to supplement the navy with an adequate reserve of ships and men. It would have the economic advantage of keeping at home part of the vast sums now paid foreign shipping for carrying American goods. All the great commercial nations pay heavy subsidies to their merchant marine, so that it is obvious that without some wise aid from the Congress the

TAFT—TALBOT

United States must lag behind in the matter of merchant marine in its present anomalous position.

Legislation to facilitate the extension of American banks to foreign countries is another matter in which our foreign trade needs assistance.

Chambers of Foreign Commerce.—The interests of our foreign commerce are non-partisan, and as a factor in prosperity are as broad as the land. In the dissemination of useful information and in the co-ordination of effort certain unofficial associations have done good work towards the promotion of foreign commerce. It is cause for regret, however, that the great number of such associations and the comparative lack of co-operation between them fails to secure an efficiency commensurate with the public interest. Through the agency of the Department of Commerce and Labor, and in some cases directly, the Department of State transmits to reputable business interests information of commercial opportunities, supplementing the regular published consular reports. Some central organization in touch with associations and chambers of commerce throughout the country and able to keep purely American interests in closer touch with different phases of commercial affairs would, I believe, be of great value.

Improvement of the Foreign Service.—The entire foreign-service organization is being improved and developed with especial regard to the requirements of the commercial interests of the country. The rapid growth of our foreign trade makes it of the utmost importance that governmental agencies through which that trade is to be aided and protected should possess a high degree of efficiency. Not only should the foreign representatives be maintained upon a generous scale in so far as salaries and establishments are concerned, but the selection and advancement of officers should be definitely and permanently regulated by law so that the service shall not fail to attract men of high character and ability.

I therefore again commend to the favorable action of the Congress the enactment of a law applying to the Diplomatic and Consular Service the principles embodied in Section 1753 of the Revised Statutes of the United States, in the Civil Service

act of Jan. 16, 1883, and the executive orders of June 27, 1906, and of Nov. 26, 1909. In its consideration of this important subject I desire to recall to the attention of the Congress the very favorable report made on the Lowden bill for the improvement of the foreign service by the Foreign Affairs Committee of the House of Representatives. Available statistics show the strictness with which the merit system has been applied to the foreign service during recent years and the absolute nonpartisan selection of consuls and diplomatic-service secretaries, who, indeed, far from being selected with any view to political consideration, have actually been chosen to a disproportionate extent from States which would have been unrepresented in the foreign service under the system which it is to be hoped is now permanently obsolete. Some legislation for the perpetuation of the present system of examinations and promotions upon merit and efficiency would be of greatest value to our commercial and international interests.

Tailfer, PATRICK, physician; lived in the eighteenth century. He emigrated to the colony of Georgia, and, becoming dissatisfied with the conduct of affairs, he left the colony in 1740 and went to Charleston, S. C., where, with Hugh Anderson and David Douglass, he printed *A Narrative of the Colony of Georgia from the First Settlement thereof until the Present Period* (1741).

Takahira, KOGARU, BARON, diplomatist; born in Japan, in 1854; entered the Foreign Office, 1876; attached to the legation at Washington, 1879-83; secretary of the Foreign Office, 1883-85; chief of its political bureau, 1890-91; minister to Holland and Denmark, 1893-94, to Italy, 1894-95 and 1906-07, to Austria and Switzerland, 1896-99, and to the United States, 1900-06 and (ambassador) 1908-09; and was one of the Japanese signers of the TREATY OF PORTSMOUTH (*q. v.*), which terminated the Russo-Japanese War, 1905.

Talbot, JOHN, colonial bishop; born in Wymondham, England, in 1645. In 1704 the clergy of New York, New Jersey, and Pennsylvania petitioned for a bishop. Talbot was favored by Queen Anne in his efforts, but failed to obtain the appointment

TALBOT—TALCOTT

of a suffragan, and he resolved to ask for consecration for himself by nonjuring bishops. This was done by two bishops, and in 1722 he returned to America and assumed episcopal authority. The governor of Pennsylvania (Keith) complained of him to the Lords of the Privy Seal, and he was summoned to England, but did not go. He died in Burlington, N. J., Nov. 29, 1727.

Talbot, SILAS, naval officer; born in Dighton, Mass., in 1751; was captain in a Rhode Island regiment at the siege of Boston; accompanied the American army to New York; and, for skilful operations with fire-rafts against the British shipping there, received from Congress the

SILAS TALBOT.

commission of major. In the summer of 1776 he accepted the command of a fire-brig on the Hudson. By orders of Washington, after gaining Harlem Heights (Sept. 15), Talbot attempted the destruction of the British vessels of war lying off the present 124th Street, New York City. At 2 A.M. on the 16th, Talbot ran down the river and, grappling the *Romney*, set his brig on fire. The crew of the brig escaped in a boat, and the *Romney* soon freed herself without injury. The other war-vessels fled out of the harbor in alarm. Talbot received a severe wound in the defence of Fort Mifflin, and gave

material aid to General Sullivan on Rhode Island in 1778. A few weeks later he captured a British floating battery anchored in one of the channels commanding Newport, and for this exploit was commissioned captain. In his prize (the *Pigot*) he cruised off the New England coast, capturing several prizes. In 1780 he was captured and confined in the prison-ship *Jersey*, removed to England, and exchanged in 1781. After the war he purchased the confiscated estate of Sir William Johnson, near the Mohawk River; served in the New York Assembly, and was a member of Congress in 1793-94. He was employed in 1794 to superintend the construction of the frigate *Constitution*, which, in 1799, was his flag-ship in a cruise to the West Indies. He resigned Sept. 21, 1801. He died in New York City, June 30, 1813.

Talcott, ANDREW, civil engineer; born in Glastonbury, Conn., April 20, 1797; graduated at the United States Military Academy in 1818; accompanied Gen. H. Atkinson, 1819, to establish military posts on the upper Missouri and Yellowstone rivers. He devised the Talcott method for determining territorial latitudes by observations of stars near the zenith. He died in Richmond, Va., April 22, 1883.

Talcott, GEORGE, military officer; born in Glastonbury, Conn., Dec. 6, 1786; joined the army in 1813; promoted first lieutenant in March, 1814; served through the Mexican War, being promoted colonel and chief of ordnance in March, 1848. Talcott was court-martialled and forced to retire on July 8, 1851. Many prominent men declared the sentence unjust and illegal. Talcott died in Albany, N. Y., April 25, 1862.

Talcott, JOHN, military officer; born in Braintree, England, about 1630; settled in Boston, and later in Hartford, Conn.; was made ensign of colonial troops in 1650; became captain in 1660; treasurer of the colony in 1660-76; and was one of the patentees named in the charter granted to Connecticut in 1662 by Charles I. He served in the Indian War of 1676 as major, and as head of the "standing army" of Connecticut, accompanied by 200 Mohican and Pequod Indians, fought a successful battle at the Housatonic. He was promoted lieutenant-colonel during

TALLADEGA—TALLMADGE

the war. Many of his official papers are preserved among the State records in Hartford. He died in Hartford, Conn., July 23, 1868.

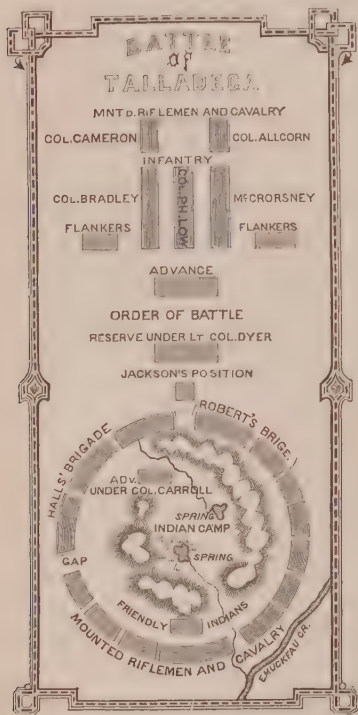

Talladega, BATTLE AT. On the evening of Nov. 8, 1813, Gen. Andrew Jackson and his troops were resting within 6 miles of Talladega, one of the chief gathering-places of the hostile Creek Indians in Talladega county, Ala., a little east of the Coosa River. Jackson's forces, composed of 1,200 infantry and 800 mounted men, were disposed for action so as to enclose

MASSACRE AT) stirred the indignation of the whole people of the Southwest. Jackson was then prostrate at a Nashville inn from the effects of a bullet received from the hands of Thomas H. Benton, in a duel. He appealed to the Tennesseans to take the field. Five thousand men speedily responded. Jackson despatched (Sept. 26, 1813) Gen. John Coffee, with 500 dragoons and as many mounted volunteers as could join him immediately, towards the Creek country. Jackson joined him soon afterwards, and drilled his troops thoroughly for the emergency. When he arrived at the Coosa he was informed that the hostile Creeks were assembled at Tallasahatchee. Jackson sent Coffee, with 1,000 horsemen, to attack them. He was accompanied by friendly Creeks and Cherokees. On the morning of Oct. 3 the Indians were decoyed out of the town and were immediately smitten by a volley of bullets. The Creeks fought valiantly. Inch by inch they were pushed back by their assailants, who attacked them at all points. Not one would ask quarter. Every warrior was killed. Fully 200 Indians perished, and eighty-four women and children were made prisoners. The loss of the Americans was five killed and forty-one wounded. Having destroyed the town, Coffee marched back to Jackson's camp on the Coosa, followed by a train of sorrowful captives.

Talleyrand-Perigord, CHARLES MAURICE DE, PRINCE DE BENEVENT, diplomatist; born in Paris, Feb. 13, 1754; was minister of foreign affairs under Napoleon, and conducted the negotiations resulting in the cession of Louisiana to the United States in 1803. He died in Paris, May 17, 1838. See X. Y. Z. LETTERS.

Talliaferro, WILLIAM BOOTH, military officer; born in Belleville, Va., Dec. 28, 1822; graduated at William and Mary College in 1841; served in the Mexican War; entered the Confederate army in 1861, reaching the rank of major-general in 1865. He was with the army of Northern Virginia until 1863 when he was transferred to Savannah and later to Florida and South Carolina. He died in Belleville, Feb. 27, 1898.

Tallmadge, BENJAMIN, military officer; born in Brookhaven, N. Y., Feb. 25, 1754; entered the patriot army as

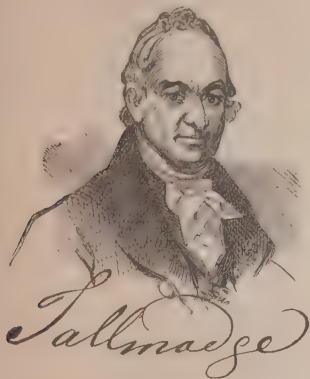

the foe in a circle. He moved at sunrise, Nov. 9. The battle soon became general, and raged for about fifteen minutes, when the Indians broke and fled in all directions. They were pursued for several miles, and over 300 of the dusky warriors were slain, besides a large number wounded. The Americans lost fifteen killed and eighty-five wounded.

Tallasahatchee, BATTLE AT. The massacre at Fort Mims (see MIMS, FORT,

TALLMADGE—TAMMANY

Lieutenant of a Connecticut regiment in June, 1776, and soon rose to the rank of colonel. In 1779-80 he was engaged in expeditions against bodies of British and Tories on Long Island, and was in some of the principal battles of the war. In

the fall of 1780 he had the custody of Major André until after that officer's execution. He was long in Washington's military family, and was his confidential correspondent. He became a successful merchant, and, from 1801 to 1817, was a member of Congress. He died in Litchfield, Conn., March 7, 1835.

Tallmadge, JAMES, lawyer; born in Stamford, N. Y., Jan. 28, 1778; graduated at Brown University in 1798; studied law and practised for several years; but later turned his attention to agriculture. He was for some time private secretary to Gen. George Clinton; had command of a regiment in New York during the War of 1812-15; was member of Congress in 1817-19, and introduced an amendment to the bill restricting slavery to the region west of the Mississippi; was a member of the State legislature in 1825-26; visited Russia and introduced American machinery there in 1835; and was one of the founders of the University of the City of New York. He died in New York, Sept. 29, 1853.

Tallmadge, THOMAS DE WITT, clergyman; born in Bound Brook, N. J., Jan. 7, 1832; studied at the University of the City of New York, and graduated at the New Brunswick Theological Seminary in 1856; was ordained pastor of the Reformed

Dutch Church in Belleville, N. J., in the same year; was pastor of the Central Presbyterian Church (popularly known as the Tabernacle) of Brooklyn, in 1869-94, during which time this well-known place of worship was destroyed by fire three times. Feeling himself unable to stand the strain of building another church edifice, he removed to Washington, D. C. His sermons were published every week for twenty-nine years. In 1900 it was estimated that their publication in 3,600 papers carried them to no less than 30,000,000 people weekly throughout the world. He was editor of the *Christian Herald* for many years. He died in Washington, D. C., April 12, 1902.

Talon, PIERRE, explorer; born in Canada after 1650; was with the La Salle expedition to Illinois in 1687. After the murder of La Salle he lived for a time with the Ceniz Indians. Later he became an interpreter to Franciscan missionaries who had arrived at the village. Subsequently he went, with a sister and two brothers, to Mexico. He wrote an account of La Salle's death in a work entitled *Narrative of Pierre and Jean Talon, by the Order of Count Ponchartrain, to their Arrival at Vera Cruz, Sept. 14, 1698*. He died after 1700.

Tammany, ST., a great and good chief of the Delaware Indians, called Tamenand by the early settlers of Pennsylvania. He is supposed to have been one of those who made the famous treaty with WILLIAM PENN (*q. v.*). He was revered by the Delawares almost like a deity, and old and young went to him for counsel. He never had his equal among them. In the Revolutionary War the admirers of the good chief conferred upon him the title of saint, and he was established as the patron saint of America. His name was inserted in some calendars, and his festival was celebrated on May 1 of each year. After the Revolution an association was formed in Philadelphia, called the Tammany Society. On May 1 they paraded the streets, with bucktails in their hats, and proceeded to a pleasant retreat out of town, which they called the "wigwam," where, after a long talk, or Indian "palaver," had been delivered, and the calumet of peace and friendship had been duly smoked, they spent the

TAMMANY SOCIETY—TANNER

day in festivity and mirth. After dinner Indian dances were performed in front of the wigwam, the calumet was again smoked, and the company separated.

Tammany Society, or Columbian Order, a political organization formed chiefly through the exertions of William Mooney, an upholsterer in the city of New York, at the beginning of the administration of President Washington. Its first meeting was held on May 13, 1789. The society took its name from St. Tammany. The officers of the society consisted of a grand sachem and thirteen inferior sachems, representing the President and the governors of the thirteen States. Besides these there was a grand council, of which the sachems were members. It was a

to the organization, and from that time it became a political society. They met at first in Martling's Long Room, on the corner of Nassau and Frankfort streets. In 1800 the society determined to build a wigwam, and Tammany Hall was erected by them on that spot. Many years afterwards they abandoned the old wigwam and made their quarters in a fine building on Fourteenth Street, adjoining the Academy of Music. Although the actual membership of the society embraced only a few hundred men, it has been able for many years to control and poll many thousand votes and wield an immense power in the politics both of New York City and of the State. Its connection with the gigantic frauds of the Tweed ring led to a natural reaction and a temporary check, but it soon recovered its prestige and now influences the party in the State as well as the city.

Tampa, a city, port of entry, and county-seat of Hillsboro county, Fla. During the American-Spanish War in 1898 it was one of the rendezvous for the American army when being assembled for the invasion of Cuba. Pop. (1910), 37,782.

Tampico, a seaport town of Mexico, in the State of Tamaulipas, on the Panuco River, .5 miles from the Gulf of Mexico; was taken possession of by the fleet of Commodore Conner, Nov. 14, 1846, in the early part of the war with Mexico.

Taney, ROGER BROOKE, jurist; born in Calvert county, Md., March 17, 1777; graduated at Dickinson College in 1795; admitted to the bar in 1799. He was of a family of English Roman Catholics who settled in Maryland. At the age of twenty-three he was a member of the Maryland Assembly; was State Senator in 1816, and attorney-general of Maryland in 1827. In 1831 President Jackson appointed him United States Attorney-General, and in 1836 he was appointed chief-justice of the Supreme Court of the United States, to succeed Judge Marshall. In 1857 he gave his famous opinion in the DRED SCOTT CASE (*q. v.*), and was an earnest upholder of the slave-system. He died in Washington, D. C., Oct. 12, 1864.

Tanner, BENJAMIN, engraver; born in New York City, March 27, 1775; removed to Philadelphia, Pa., in 1799, and with his brother Henry founded a map-publishing

TAMMANY HALL.

very popular society and patriotic in its influence. Its membership included most of the best men of New York City. No party politics were tolerated in its meetings. But when Washington denounced "self-constituted societies," in consequence of the violent resistance to law made by the secret Democratic societies, at the time of the WHISKEY INSURRECTION (*q. v.*), nearly all the members left it, believing their society to be included in the reproach. Mooney and others adhered

TANNER—TAPPAN

establishment. He also founded the bank-note engraving house of Tanner, Vallance, Kearny & Co., in 1816. Later this enterprise was abandoned and he founded a blank-check-note and draft publishing concern. His engravings include *Apotheosis of Washington*; *Perry's Victory on Lake Erie, Sept. 10, 1813*; *The Launch of the Steam Frigate Fulton*; *Macdonough's Victory on Lake Champlain, and Defeat of the British Army at Plattsburg by General McComb, Sept. 11, 1814*; *The Surrender of Cornwallis at Yorktown*; *America Guided by Wisdom*, etc. He died in Baltimore, Md., Nov. 14, 1848.

Tanner, BENJAMIN TUCKER, clergyman; born of African parents in Pittsburgh, Pa., Dec. 25, 1835; studied theology in the Western Theological Seminary; was editor of the *Christian Recorder* for sixteen years; founded the African Methodist Episcopal Church Review, of which he was editor for four years. He was ordained bishop in 1888. His publications include *The Origin of the Negro*; *The Negro in Holy Writ*; *The Color of Solomon: What? Is the Negro Cursed? etc.*

Tanner, HENRY S., cartographer; born in New York City in 1786; brother of Benjamin Tanner; settled in Philadelphia early in life; returned to New York in 1850. His maps include the *New American Atlas*; *The World*; *Map of the United States of Mexico*; *Map of Philadelphia*; and *Map of the United States of America*. He was also the author of *Memoir on the Recent Surveys in the United States*; *View of the Valley of the Mississippi*; *American Traveller*; *Central Traveller*; *New Picture of Philadelphia*; and *Description of the Canals and Railroads of the United States*. He died in New York City in 1858.

Tanner, JAMES, attorney; born in Richmondville, N. Y., April 4, 1844; received a common school education; enlisted as a private in the 87th New York Volunteers in 1861; was promoted corporal; took part in the second battle of Bull Run, and there lost both legs. He returned to his native State in 1866; studied law; was appointed to a post in the New York Custom-house; became deputy collector under General Arthur; was tax collector of Brooklyn in 1877-85; and was appointed United States Com-

missioner of Pensions in 1889. On resigning this office he became a pension attorney.

Tanner, JOHN, captive; born in Kentucky about 1780. His father laid out a farm at the mouth of the Big Miami River, O. When John was six years old he was captured by an Indian, and after two years' detention was sold to Net-nokwa, an Ottawa Indian. He lived in captivity for thirty years, becoming so thoroughly accustomed to Indian life that he forgot his own language. He engaged in warlike expeditions and married Miskwa-bun-o-kwa ("the Red Sky of the Morning"). Subsequently he went to Detroit, where he met his brother and visited his family. He was then employed as an interpreter. He was the author of a *Narrative of the Captivity and Adventures of John Tanner during Thirty Years' Residence among the Indians*. He died in 1847.

Tanoan Indians, a family of North American Indians that were widely scattered in the middle of the sixteenth century, and were divided into several groups which received distinct names from the Spanish discoverers and conquerors. They occupied nearly all of the valley of the Rio Grande del Norte, a stretch of country approximately 230 miles long by an extreme width of 100 miles, and extending within forty miles of New Mexico to within 120 miles of Mexico. The last tribal remnant in New Mexico died early in the nineteenth century.

Taos. See TANOAN INDIANS.

Tappan, a village of New York, 24 miles north of New York City, and 1½ miles west of the Hudson River. Here, on Oct. 2, 1780, MAJ. JOHN ANDRÉ (q. v.) was hanged as a British spy.

Tappan, ARTHUR, philanthropist; born in Northampton, Mass., May 22, 1786; received a common school education; established himself in business in Portland, Me., and subsequently in Montreal, Canada, where he remained until the beginning of the War of 1812. He was the founder of Oberlin College, and erected Tappan Hall there; endowed Lane Theological Seminary in Cincinnati; established a professorship at Auburn Theological Seminary; was one of the founders of the American Tract Society; and

TAPPAN—TARIFF

with his brother established the *New York Journal of Commerce* in 1828 and *The Emancipator* in 1833. He was the first president of the American Anti-slavery Society, to which he contributed \$1,000 a month for several years, but withdrew in 1840 on account of the aggressive spirit manifested by many members towards the churches and the Union. He died in New Haven, Conn., July 23, 1865.

Tappan, LEWIS, merchant; brother of Arthur Tappan; born in Northampton, Mass., May 23, 1788. In 1833 he became deeply interested in the anti-slavery movement, in consequence of which he and his brother at various times suffered personal violence. He was involved in the crisis of 1837, and soon after withdrew from the firm and established the first mercantile agency in the country. He died in Brooklyn, N. Y., June 21, 1873.

Tappan Patent. Gov. Dongan made a grant of land in what is now Orange county, N. Y., to six Dutch grantees, in 1686, to be held in fee and common socage of James II.

Tarbell, IDA MINERVA, author; born in Erie county, Pa., Nov. 5, 1857; graduated at Alleghany College; associate editor of *Chautauqua Magazine* and *McClure's Magazine*. Among her works are *Early Life of Lincoln*; *Life of Lincoln*; *The Standard Oil Company*; *He Knew Lincoln*; *The Tariff in our Times*, etc.

Tarbox, INCREASE NILES, author; born in East Windsor, Conn., Feb. 11, 1815; graduated at Yale College in 1839; pastor of a Congregational church in Framingham, Mass., 1844; and secretary of the American College and Education Society of Boston. His publications include *The Curse of Ham*; *Life of Israel Putnam*; *Sir Walter Raleigh and his Colony in America*, etc. He died in West Newton, Mass., May 3, 1888.

Tariff. The tariff is a tax levied upon exports or (especially) imports. A duty was early collected by Moslem rulers at the Spanish port Tarifa, whence the modern name, on goods passing through the Strait of Gibraltar. The word as used in the United States was adopted from the English tariffs, which before the reign of Queen Elizabeth were prohibitory, and since used as a source of revenue. In the United States the tariff is for revenue

and protection; there are no prohibitory duties except on chiccory, shoddy, doctored wines, and a few articles of like character. Before the adoption of the United States Constitution most of the American colonies had systems of taxation on imports. The first acts of the Dutch West India Company with reference to the colony of New Netherlands provided for export and import duties, and specific rates were levied on furs and codfish by act of June 7, 1629. In 1661 the council of Virginia laid an import tax on rum and sugar, and forbade unloading them except at appointed ports. The government of Massachusetts enacted a general import tax, November, 1668. Under the confederation, the Continental Congress made numerous unsuccessful attempts to induce the States to join in an import tax for the common treasury, only succeeding in securing, in 1786, an agreement from New York, granting to the United States certain imposts, provided the other States did the same. A measure for taxing imports, "for the support of the government, for the discharge of debts of the United States, and the encouragement and protection of manufactures," was introduced in the House of Representatives of the First Congress, by James Madison, April 8, 1789. From this dates tariff legislation in the United States.

CHRONOLOGY.

Congress passes first tariff act, to continue in force until June, 1796, combining specific duties on some articles and *ad valorem* on others, equivalent to an 8½ per cent. *ad valorem* rate, with drawback, except 1 per cent. of duties, on all articles exported within twelve months, except distilled spirits other than brandy and geneva, signed by Washington

July 4, 1789

Act of Congress passed to regulate the collection of duties. Each collection district to lie within a State. Providing for collectors, deputy collectors, naval officers, surveyors, weighers, measurers, gaugers, and inspectors. *Ad valorem* duties to be estimated by adding 20 per cent. to the actual cost thereof if imported from the Cape of Good Hope or any place beyond, and 10 per cent. if from any other country. Duties to be paid in cash if under \$50; if

TARIFF

over, might be secured by bond to run from four to twelve months, with 10 per cent. discount for prompt payment

July 31, 1789

Act laying duties on importations extended to North Carolina, Feb. 8, and to Rhode Island.....June 14, 1790

Act of July 4, 1789, repealed, and new law enacted raising duties to equal an 11 per cent. *ad valorem* rate

Aug. 10, 1790

Tariff rate raised to equal 13½ per cent., by act of.....May 2, 1792

Additional duties levied on imports, particularly tobacco, snuff, and refined sugar, by acts of.....June 5-7, 1794

Tariff on brown sugar, molasses, and tea increased.....March 3, 1797

Duty on salt increased from 12 to 20 cents by act of.....July 8, 1797

First elaborate act of Congress for taking possession of arriving merchandise, and levying and collecting duties

March 2, 1799

Additional duties imposed on wines, sugar, molasses, and such articles as have paid 10 per cent.....May 13, 1800

Two and one-half per cent. *ad valorem* imposed on all importations in American vessels, and 10 per cent. in foreign vessels, in addition to existing rates, for a fund to protect commerce and seamen against the Barbary powers, commonly called the "Mediterranean fund"....March 27, 1804

All tariff duties increased 100 per cent., and 10 per cent. additional on goods imported in foreign ships.....July 1, 1812

Double war duties continued until June 30, 1816, and after that day an additional duty of 42 per cent. until a new tariff shall be formed.....Feb. 5, 1816

A. J. Dallas, Secretary of the Treasury, reports to Congress on the subject of a general tariff of increased duties

Feb. 13, 1816

Mr. Lowndes, of South Carolina, reports a bill from the committee on ways and means to regulate duties on imports and tonnage.....March 12, 1816

Tariff bill opposed by Mr. Webster and most of the Eastern States, and by John Randolph, and supported by Messrs. Clay, Calhoun, and Lowndes. Among other provisions was one for the gradual reduction of the tax on cotton and woollen goods. Act passes the House by a vote of

88 to 54, and the Senate by 25 to 7, and becomes a law.....April 27, 1816

Act passed deferring the time of reduction of tariff on woollens and cottons until 1826, and raising the duty on bar iron from \$9 to \$15 per ton

April 20, 1818

Resolutions introduced in Congress for the abolition of drawbacks, and bills to shorten long credits on importations, to tax auction sales of imports, and to collect duties in cash debated, but fail to become laws.....1819-22

Auction system, by which foreigners shipped goods to the United States, undervaluing them in the invoice, for which the auctioneer gave bonds and immediately sold for what they would bring, is remedied by deterrent legislation, which began in 1818 and concluded in act of

March 1, 1823

Tariff bill with average rate of 37 per cent. duties, after a debate of ten weeks, passes the House by vote of 107 to 102. The Senate adds amendments which the House rejects. The difference is settled by a committee of conference, and bill passes Senate by 25 to 22, approved

May 22, 1824

National convention, called by the Pennsylvania Society for the Promotion of Manufactures and Mechanic Arts at Harrisburg, adopts resolutions in favor of more protection on iron, steel, glass, wool, woollens, and hemp.....July 30, 1827

Tariff bill, based on recommendation of Harrisburg convention, introduced in Congress.....Jan. 31, 1828

New tariff, with a 41 per cent. rate, favored by Daniel Webster, is debated from March 4 to May 15; passed by House, 109 to 91; Senate, 26 to 21, and approved.....May 19, 1828

[This became known as the "Tariff of Abominations." South Carolina protested against it as unconstitutional, oppressive, and unjust. North Carolina also protested, and Alabama and Georgia denied the power of Congress to lay duties for protection.]

Duties on coffee, cocoa, and tea reduced by act of May 20; on molasses and salt by act.....May 29, 1830

Secretary of the Treasury Ingham, in his report, advocates "home" valuation in place of "foreign," the current value

TARIFF

of goods in the United States to be the dutiable value.....Dec. 15, 1830

National free-trade convention meets in Philadelphia.....Sept. 30, 1831

National protection convention meets in New York.....Oct. 26, 1831

George McDuffie, representative from South Carolina, from committee on ways and means, reports a bill proposing *ad valorem* duties for revenue only

Feb. 8, 1832

John Quincy Adams reports a bill repealing the act of 1828, and reducing duties on coarse woollens, iron, etc.

May 23, 1832

Tariff bill retaining the protective features of the tariff of 1828, but reducing or abolishing many taxes, is reported. It reduced the tax on iron, increased that on woollens, made some raw wools free, and left cotton unchanged. Duties of less than \$200 to be paid in cash without discount, law to take effect March 3, 1833; approved.....July 14, 1832

Representatives from South Carolina publish an address on the subject of the tariff, urging resistance....July 15, 1832

Convention meets in Columbia, S. C., Nov. 19, and calls on the legislature to declare the tariff acts of 1824 and 1828 null and void in that State, and to prohibit the collection of duties there after Feb. 1, 1833; law passed...Nov. 24, 1832

Secretary of the Treasury, in his report, recommends a reduction of duties to the requirements of revenue....Dec. 5, 1832

President proclaims intention to enforce the laws.....Dec. 11, 1832

Mr. Verplanck, from the committee on ways and means, reports a bill providing for the reduction of duties in the course of two years to about one-half

Jan. 8, 1833

"Compromise Tariff bill" introduced by Mr. Clay.....Feb. 12, 1833

House strikes out Mr. Verplanck's bill and substitutes Mr. Clay's, which declares its object to be "to prevent the destruction of the political system, and to arrest civil war and restore peace and tranquillity to the nation." It provides for a gradual reduction in duties, and for "home valuation," all duties to be paid in cash. Passed by vote of 118 to 84 in the House, and 29 to 16 in the Senate, and approved.....March 2, 1833

"Force bill" or "Bloody bill," to enforce the collection of duties, passed by Congress.....March 2, 1833

Nullification acts repealed by South Carolina.....March 18, 1833

Home league formed to agitate for high duties1841

A general tariff act, with average rate of duty about 33 per cent., and dropping the principle of "home valuation," is passed.....Sept. 11, 1841

Tariff law passed containing the much-controverted and litigated "similitude section" (sec. 20), imposing duties on non-enumerated articles which may be similar in material, quality, texture, or use to any enumerated article..Aug. 30, 1842

Tariff bill passes the House by a vote of 114 to 95, and the Senate by the casting vote of the Vice-President, George M. Dallas. Average rate of duty 25½ per cent.....July 30, 1846

Warehouse system established by act of Congress.....Aug. 6, 1846

Robert J. Walker introduces the system of private bonded warehouses, which is confirmed by act of Congress

March 28, 1854

Free-trade policy declared in the platform of the Democratic party at Cincinnati.....June 6, 1856

Tariff act passed lowering the average duty to about 20 per cent..March 3, 1857

Republican Convention at Chicago adopts a protective-tariff platform

May 17, 1860

Tariff bill, raising the tariff of 1857 about one-third, introduced in the House by Mr. Morrill, passed and approved, March 2, 1861; goes into effect

April 1, 1861

Amended tariff act raising duties passed.....Aug. 5, 1861

Act passed increasing tariff on tea, coffee, and sugar.....Dec. 24, 1861

Act passed raising tariff duties temporarily.....July 14, 1862

Act passed "to prevent and punish frauds upon the revenue," etc., which provides that all invoices of goods be made in triplicate, one to be given the person producing them, a second filed in the office of the consular officer nearest the place of shipment, and the third transmitted to the collector at the port of entry.....March 3, 1863

TARIFF

Joint resolution raising all duties 50 per cent. for sixty days, afterwards extended to ninety days.....April 29, 1864

General revision of tariff, increasing duties passed.....June 30, 1864

Bill passed increasing tariff rates, March 3, 1865, and amended..July 28, 1866

Transportation in bond of goods destined for Canada or Mexico, through the United States, provided for by act of

July 28, 1866

Convention of woollen manufacturers at Syracuse ask increased duties. They form an alliance with wool-growers, and arrange a tariff which becomes a law by act of.....March 2, 1867

Duty on copper and copper ore increased by act of.....Feb. 24, 1869

First law distinctly authorizing the appointment of special agents of the treasury in the customs service, passed

May 12, 1870

Following a general debate on an act to reduce internal taxes, etc., a new tariff, retaining most of the protective features, becomes a law.....July 14, 1870

Duties removed from tea and coffee after July 1, 1872, by act of..May 1, 1872

General act passed reducing duties on imports and internal taxes..June 6, 1872

All provision moiety to informers repealed, and the proceeds of all fines, penalties, and forfeitures to be paid into the treasury, by act of.....June 22, 1874

Tariff law amended by act of Congress

Feb. 8, 1875

Salts and sulphate of quinine put on the free-list.....July 1, 1879

Act creating a tariff commission of nine civilians appointed by the President to visit different sections of the country in the interest of tariff revision and report

May 15, 1882

Tariff commission, consisting of John L. Hayes, president, Henry W. Oliver, Jr., Austin M. Garland, Jacob Ambler, Robert P. Porter, John W. H. Underwood, Duncan F. Kenner, Alexander R. Boetler, and William H. McMahon, organizes at the Ebbitt House, Washington, D. C.,

July 6, 1882

Report of tariff commission submitted to Congress and referred to ways and means committee.....Dec. 4, 1882

Act passed repealing section 2510 of the Revised Statutes (levying an addition-

al duty of 10 per cent. on goods from places west of the Cape of Good Hope), May 4, and amended.....Dec. 23, 1882

Senate reports a tariff bill which is called up for consideration, Jan. 10; House bill reported by ways and means committee, Jan. 16; both bills discussed and amended for several weeks; a conference committee meets, Feb. 28; after some resignations and reappointments of members, reports, March 2, accepted in the Senate, 12.30 A.M., March 3, by 32 to 31 votes, and in the House at 5.30 P.M., March 3, by 152 to 116 votes, and signed by the President before adjournment, which was after midnight..March 3, 1883

A bill "to reduce import duties and war-tariff taxes," introduced by Mr. Morrison, is reported in the House, March 11, and defeated by vote of 159 to 155

April 15, 1884

A bill to reduce tariff taxes, introduced by Mr. Morrison, is lost by vote of the House, 157 to 140.....June 17, 1886

Mills bill, a measure "to reduce taxation and simplify the laws in relation to the collection of revenue," introduced in the House by Roger Q. Mills, of Texas, chairman of the ways and means committee.....April 2, 1888

Mills bill is taken up for discussion, April 17, and debated until July 19, and passes the House by vote of 149 to 14

July 21, 1888

[Referred in the Senate to the finance committee, by whom a substitute was prepared, and failed to become a law.]

A bill "to equalize duties upon imports and to reduce the revenue of the government," introduced by William McKinley, Jr., of Ohio.....April 16, 1890

McKinley Customs Administration act approved.....June 10, 1890

McKinley tariff bill passes the House, May 21; referred to Senate committee on finance, May 23; reported to the Senate with amendments, June 18; passes Senate with amendments, Sept. 10; reported by conference committee to House, Sept. 26; approved by the President, Oct. 1, and takes effect Oct. 6, 1890

Tariff (Wilson) bill made public

Nov. 27, 1893

Internal revenue bill containing the income-tax reported to the House

Jan. 24, 1894

Tariff bill with income tax attached passes the House, 204 to 140.. Feb. 1, 1894	Ways and Means, introduces new tariff bill.....Dec. 7, 1896
Senate passes tariff bill, 39 yeas (thirty-seven Democrats, two Populists), 34 nays (thirty-one Republicans, two Populists, one Democrat, D. B. Hill)....July 3, 1894	Bill passes the House, 205 yeas to 122 nays; and the Senate with about 870 amendments, 38 yeas, 28 nays, twenty-three not voting.....July 7, 1897
Tariff bill received in the House with 633 Senate amendments; rates increased July 5, 1894	House non-concurred in Senate amendments; conference committee reported favorably on majority of Senate amendments; report agreed to; and act approved by the President....July 24, 1897
House disagreeing, a conference committee is appointed; the Senate compels the House to adopt its amendments Aug. 13, 1894	Payne-Aldrich tariff bill passed by Sixty-first Congress and approved by the President.....Aug. 5, 1909
Becomes a law without the signature of the President Aug. 27, 1894	Tariff Commission. See TARIFF LEGISLATION.
Chairman Dingley, of the Committee on	

TARIFF LEGISLATION

Tariff Legislation. The question of tariffs in the United States has been a disputed point since the very formation of the nation. The overthrow of one political party has almost invariably been followed by a revision of the tariff. Gradually through all these changes the two great national parties have come to have a rather settled policy in regard to the tariff. The history of the tariff struggle in the United States is here given.

The question of raising a sufficient national revenue was one of the first and most important matters discussed by the Congress of 1789. The tariff, which was passed on July 4 of that year, was nominally protective. Specific duties were placed on spirits and fermented liquors, sugar, coffee, tea, and some other articles, while the remaining mass of imports bore *ad valorem* duties averaging about 8½ per cent. This tariff of 1789 was largely the work of Madison. Protection was not in the early years of the republic a party measure, or indeed a vital question.

The effect of the restrictive actions of France and Great Britain in the Napoleonic régime and of the embargo, followed by the War of 1812, was to make the United States more dependent on itself for manufactures. Soon after the close of the war the tariff of April 27, 1816, was adopted. The increase of manufacturing interests was shown in the increasing duties, which in the case of cotton reached 25 per cent. Shortly after the panic of

1819 came an attempted tariff measure in 1820. By 1824 the movement towards higher protection showed itself in the act of May 22, in which the average rate was 37 per cent. Woollen goods, cotton goods, and iron were main subjects of debate from the early stages of the controversy. The tariff of 1824 was protectionist, but in 1828 a tariff was passed which, on account of its various eccentricities, received the name of the Tariff of Abominations. Opposition to this act was very bitter in the South, and led to the nullification movement. The law was modified in 1832, and further in 1833 by the compromise tariff promoted by Henry Clay. By this act duties were to be gradually reduced to 20 per cent. Parties had again crystallized; protection was a Whig doctrine, together with internal improvements. See AMERICAN SYSTEM.

High protection was revived by the tariff of 1842, in which the duties averaged about 33 per cent. But in 1846 the Democrats passed the low Walker tariff, named after the Secretary of the Treasury, Robert J. Walker. The average rate was about 25 per cent., and under this law the country continued until 1857, when, with an overflowing revenue, the rate was still further reduced to about 20 per cent. From 1846 to 1861, accordingly, there was an approach to a revenue tariff. The Morrill tariff, named after the chairman of the ways and means committee, was enacted in 1861, having a protection char-

TARIFF LEGISLATION

acter; the Civil War broke out; expenses of government enormously increased; in 1862 a stringent internal revenue act was passed. As the war developed, all financial experiments were tried, taxes on incomes and corporation receipts, on manufactures, also loans, and inconvertible currency; in 1864 a tariff bill was enacted which accorded a high measure of protection and produced a large amount of revenue. From 1866 to 1872 the internal-revenue taxes were mainly abolished, but a movement towards reforming the tariff failed in 1867. In 1870 the duties on purely revenue articles were lowered, and in 1872 tea and coffee were admitted free, and the protective duties received a 10 per cent. "horizontal" reduction. Party lines were not drawn upon these measures, although the war tariffs had been passed by the Republicans. This 10 per cent. reduction was in 1875 revoked, but the tariff was not generally discussed, although reform bills were introduced in 1876 and 1878.

In the campaign of 1880 the Republicans made some use of protection, and the Democratic candidate, GEN. WINFIELD SCOTT HANCOCK (*q. v.*), referred to it as a local issue. In 1882 the Republicans took up the matter seriously; a tariff commission was appointed, and in 1883 an act was passed; this measure was distinctly protective; some reductions were made in wool, iron, etc., and the duty on steel rails was reduced from \$28 to \$17. Almost immediately the Democrats gained control of the House. The Morrison bill of 1884 proposed a "horizontal" reduction of 20 per cent., with free iron ore, coal, and lumber. It was opposed by the Republicans and defeated, as 41 out of 192 Democrats antagonized it. Again in 1886 another low-tariff bill met the same fate, but the number of opposing Democrats had fallen to 26 out of 169; free wool, salt, and lumber were offered.

In 1887 the protective contest entered on its last phase. The election of 1884 had not turned distinctively on the tariff; but in the December message of 1887 President Cleveland devoted his attention entirely to the surplus in the treasury and the cause of tariff reform (see CLEVELAND, GROVER). The following year the Democratic House passed the Mills bill, which

provided for free lumber and wool, reduction on pig-iron, and abolition of specific duties on cottons. The Democrats were now practically united on this side, and only 4 out of 169 votes were recorded against the bill. It failed in the Republican Senate. The same year the election for President occurred, with Cleveland and Harrison as opposing champions of tariff reform and protection respectively. The tariff was the main issue, and the Republicans were successful. As Congress was also Republican a revision of the tariff laws was made, and this measure bore the name of the McKinley tariff, from the chairman of the ways and means committee. Of this act, passed October, 1890, the following features are to be noted. Under the influence largely, it is claimed, of Secretary Blaine, reciprocity provisions were inserted when the bill was before the Senate. By these provisions the President could by proclamation impose fixed duties on sugar, wool, tea, coffee, and hides from other countries, whenever the duties imposed by such countries on American products shall be deemed unjust. Duties were accordingly laid on imports from Venezuela, Haiti, and Colombia; reciprocity treaties were negotiated with Brazil, San Domingo, Cuba, and Porto Rico, Jamaica, Barbadoes, Trinidad, British Guiana, and several States of Central America; also some reciprocity arrangements were made with Germany and France.

Other important features were the remission of the duty on sugar, a general increase in wool and woollen goods, dress goods, knit goods, linen, plush, velvets, etc.; tin plates were protected; the tobacco tax was reduced; there was an increase on barley, eggs, potatoes, a decrease on some articles, and additions to the free list. On the whole the act was regarded as a high protective measure. It raised considerable Republican opposition, especially in the Northwest. A few weeks later the Republican party met a Waterloo in the elections throughout the country, and this result was ascribed to the tariff. In 1893 the Democrats, having regained possession of the executive and both branches of Congress, prepared to deal with the question. President Cleveland was elected in 1892 largely on this

TARIFF LEGISLATION

issue, and the party platform had condemned the principle of protection. The Wilson bill, framed by Chairman Wilson, of the ways and means committee, and his associates, was presented to the House at the close of 1893, and provided for reduction of duties in some cases, and of some notable additions to the free list, including wool. On Feb. 1, 1894, it passed the House by a vote of 204 to 140. Sixteen Democrats voted against the bill.

The Wilson bill failed to provide sufficient revenue. After the election of McKinley and a Republican Congress in 1896, a strong effort was at once made to pass another tariff measure, entitled the Dingley bill. This bill somewhat resembles the McKinley bill, although the duties proposed were not as excessive. The duty on wool was restored. The Dingley bill met with much opposition, but was passed at the close of July, 1897. This was chiefly due to Western Senators, who refused to aid the Republican tariff plans unless that party would support free-silver legislation.

The Wilson tariff was chiefly noted for its free-wool (raw) provision, while one of the leading features of the McKinley law was its reciprocity clause, the text of which was as follows:

Section 3. With a view to secure reciprocal trade with countries producing the following articles, and for this purpose, on and after July 1, 1892, whenever and so often as the President shall be satisfied that the government of any country producing and exporting sugars, molasses, coffee, tea, and hides, raw and uncured, or any of such articles, impose duties or other exactions upon the agricultural or other products of the United States, which in view of the free introduction of such sugar, molasses, coffee, tea, and hides into the United States he may deem to be reciprocally unequal and unreasonable, he shall have the power, and it shall be his duty, to suspend, by proclamation to that effect the provisions of this act relating to the free introduction of such sugar, molasses, coffee, tea, and hides, the production of such country, for such time as he shall deem just; and in such case and during such suspension duties shall be levied, collected, and paid

upon sugar, molasses, coffee, tea, and hides, the product of or exported from such designated country.

Among other provisions of the McKinley law, the following were especially noteworthy:

A bounty of 2 cents per pound was authorized for all sugar grown within the United States, testing not less than 90° by the polariscope; and upon all sugars testing less than 90° and not less than 80°, a bounty of 1½ cents per pound. It was estimated that this provision would cause an annual expenditure of \$7,000,000, based upon the annual production of sugar at the time of the passage of the bill.

All packages or boxes containing articles of foreign merchandise imported into the United States must be plainly marked or stamped with the name of the country in which the articles originated.

When foreign raw materials have been made into finished products in this country and exported, 99 per cent. of the duties paid on such raw materials was refunded.

All special taxes and licenses imposed upon the manufacture of tobacco, cigars, and snuff, and upon dealers in them, were abolished, thus reducing the tax on manufactured tobacco from about 8 cents per pound to about 4 cents per pound. This is the only important change made in the internal-revenue laws.

On March 18, 1897, a bill to "provide revenue for the government and to encourage the industries of the United States" was introduced into the House of Representatives by Nelson Dingley, Jr., of Maine. The treasury had suffered since 1893 from yearly deficits, and the finances had been further deranged by the growing conviction that the currency system was not as perfect as it should be. Many believed the aggravating cause to be a want of a sufficient revenue, and the new tariff was framed to produce this revenue. By raising all existing duties to the rates collected under the law of 1890, and by subjecting to duties a large number of articles, raw materials of industry, imported free under the laws of 1890 and 1894, the framer of the measure estimated that the new scheme of duties would produce an annual revenue of \$273,500,000, or nearly \$50,000,000 more than had been obtained

TARIFF LEGISLATION

from customs in any one year since 1867. The measure passed the House, almost without debate, and the Senate finance committee prepared a bill of its own, as a substitute, differing in many important particulars from the House measure. After many conferences the two bodies came to an agreement, and the bill received the signature of the President on July 24, 1897. This tariff is one of the most detailed and extensive ever framed by Congress. The first two sections enumerate 705 articles and classes, of which 463 were subject to duty. Provision was made in Section 3 for reciprocity agreements with such nations or countries as would make adequate concessions on the products and manufactures of the United States; but the list of foreign products on which reduction of duty may be made by the United States was too limited to offer much scope for reciprocal agreements. In Section 5 the Secretary of the Treasury was directed to ascertain the net amount of any bounty, direct or indirect, paid by a foreign government on the exportation of any article or merchandise, which amount was to be added to the duty imposed on such articles or merchandise imported into the United States from the bounty-paying country. By Section 22 a discriminating duty of 10 per cent., in addition to the duties imposed by law, was imposed on "all goods, wares, or merchandise which shall be imported in vessels not of the United States, or which, being the production or manufacture of any foreign country not contiguous to the United States, shall come into the United States from such contiguous country." This section was at first believed

to have the unlooked-for effect of imposing a discriminating duty on foreign goods brought into the United States through Canada—a commerce of some importance. The Attorney-General decided that such was not the effect. A further important provision was contained in Section 32 permitting appraising officers, in determining the dutiable value of imported merchandise, to take into consideration the wholesale price at which such or similar merchandise is sold or offered for sale in the United States. This permitted "home market value" to be considered where "foreign market value is in doubt."

Tariff Act of 1909.—At the extra session of the Sixty-first Congress a measure known as the Payne-Aldrich bill was passed in the House by a vote of 217 to 161, and in the Senate by a vote of 45 to 34, and the final conference report was passed in the House by a vote of 195 to 183, and in the Senate by a vote of 47 to 31. The bill was approved by President Taft Aug. 5, 1909. It was officially considered a revision of the Dingley Act of 1897, and in general it provided for a lowering of duties, with, however, some increases. The act contained 480 paragraphs, each relating to an article or a group of articles, and the free list contained 236 articles. This act also provided for the creation of a *TARIFF COMMISSION (q. v.)* and a *COURT OF CUSTOMS APPEALS (q. v.)* and for the imposition of a *CORPORATION TAX (q. v.)*.

The following table covers only the rates on the articles of principal importance imported into the United States, and gives a comparison of the rates under the acts of 1897 and 1909.

TARIFF RATES UNDER ACTS OF 1897 AND 1909.

ARTICLES.	Rates of Duty Under—	
	Dingley Law of 1897.	New Law of 1909.
SCHEDULE A—CHEMICALS, OILS AND PAINTS.		
Alcoholic compounds, n.s.p.f.....	60c. lb. and 45 p.c. ad val.	60c. lb. and 25 p.c. ad val.
Alkalies, alkaloids, distilled oils, essential oils and all combinations of the foregoing.....	25 p.c. ad val. 1½c. lb.	25 p.c. ad val. 1½c. lb.
Ammonia, carbonite of.....	1¼c. lb. and 10 p.c. ad val.	1¼c. lb. and 10 p.c. ad val.
Drugs.....	2½c. lb.	2½c. lb.
Glue, value not above 10c. per lb.....	35c. gal.	35c. gal.
Oil, castor, gals.....		

TARIFF LEGISLATION

TARIFF RATES UNDER ACTS OF 1897 AND 1909—Continued.

ARTICLES.	Rates of Duty Under—	
	Dingley Law of 1897.	New Law of 1900.
Oil, cod liver, gals.....	15c. gal.	15c. gal.
Oil, olive in bottles, etc., gals.....	50c. gal.	50c. gal.
Oil, whale, gals.....	8c. gal.	8c. gal.
Opium, crude and not adulterated, containing 9 per cent. and over of morphia, lbs.....	\$1 lb.	\$1.50 lb.
Phosphorus, lbs.....	18c. lb.	18c. lb.
Perfumery, cosmetics, containing alcohol.....	60c. lb. and 45 p.c. ad val.	60c. lb. and 50 p.c. ad val.
Perfumery, cosmetics, not containing alcohol.....	50 p.c. ad val.	50 p.c. ad val.

*After the Tariff Law of 1909 was passed, but before it was signed by the President, the following concurrent resolution regarding hides was adopted:

Hides of cattle, raw or uncured, whether dry, salted, or pickled, shall be admitted free of duty; provided, that on and after Oct. 1, 1909, grain, buff, or split leather shall pay a duty of 7½ per cent. ad valorem; that all boots and shoes made wholly or in chief value from cattle hides and cattle skins of whatever weight, of cattle of the bovine species, including calf skins, shall pay a duty of 10 per cent. ad valorem; that harness, saddles, and saddlery, in sets or in parts, finished or unfinished, composed wholly or in chief value of leather, shall pay a duty of 20 per cent. ad valorem.

THE TARIFF MAKE-BELIEVE

The following article by Woodrow Wilson, at that time president of Princeton University, appeared in *The North American Review* for October, 1909:

The wrong settlement of a great public question is no settlement at all. The Payne-Aldrich tariff bill, therefore, which its authors would fain regard as a settlement of the tariff question, is no settlement at all. It is miscellaneously wrong in detail and radically wrong in principle. It disturbs more than it settles, and by its very failure to settle forces the tariff question forward into a new and much more acute stage.

It is obviously impossible to settle the question satisfactorily in the way these

gentlemen have attempted to settle it; it is so evident that men of their mind and with their attitude toward the economic interests of the country can never settle it that thinking men of every kind realize at last that new men and new principles of action must be found. These gentlemen do not know the way and cannot find it. They "revised" the tariff, indeed, but by a method which was a grand make-believe from beginning to end. They may have convinced themselves of the intelligence and integrity of the process, but they have convinced nobody else. The country must now go to the bottom of the matter and obtain what it wants.

It has gone to the bottom of it at

THE TARIFF MAKE-BELIEVE

some points already, and the process will be carried very far before it is through with it. In the first place, it is the general opinion throughout the country that this particular revision was chiefly pretence, and that it is the first time that we have had tariff legislation of this kind. The McKinley tariff bill and the Dingley tariff bill, whatever may be thought of their wisdom or of their validity as acts of statesmanship, were unquestionably frank and genuine. There was no concealment or make-believe about either their purpose or their character. No doubt many things were accomplished by them of which the public knew nothing and was intended to know nothing. Not all the advantages gained by this, that, or the other industry from legislation of that kind could be explained to the public without creating inconvenient comment and startling questions that might cut very deep; but that is true of all legislation which is meant to give particular classes of citizens a special economic assistance or advantage. Private favors will inevitably creep in. But no one was deceived. The men who put those measures through had no doubt that they had the support of the country in doing so. They gave the country what they thought opinion would sustain: gave it what they honestly supposed that it wanted. But no one who is capable of assessing opinion now can possibly claim that that is what the men who were behind the Payne-Aldrich legislation did. They knew that they were not giving the country what it wanted, and the more thoughtful and statesmanlike among them deeply regretted that they could not. There was a process almost of haphazard in the construction of the House bill, and mere false leadership and chicanery produced the bill which the Senate substituted for it and which largely prevailed in conference.

The methods by which tariff bills are constructed have now become all too familiar and throw a significant light on the character of the legislation involved. Debate in the Houses has little or nothing to do with it. The process by which such a bill is made is private, not public; because the reasons which underlie many of the rates imposed are private. The

stronger faction of the Ways and Means Committee of the House makes up the preliminary bill, with the assistance of "experts" whom it permits the industries most concerned to supply for its guidance. The controlling members of the Committee also determine what amendments, if any, shall be accepted, either from the minority faction of the Committee or from the House itself. It permits itself to be dictated to, if at all, only by the imperative action of a party caucus. The stronger faction of the Finance Committee of the Senate, in like fashion, frames the bill which it intends to substitute for the one sent up from the House. It is often to be found at work on it before any bill reaches it from the popular chamber. The compromise between the two measures is arranged in private conference by conferees drawn from the two committees. What takes place in the committees and in the conference is confidential. It is considered impertinent for reporters to inquire. It is admitted to be the business of the manufacturers concerned, but not the business of the public, who are to pay the rates. The debates which the country is invited to hear in the open sessions of the Houses are merely formal. They determine nothing and disclose very little.

It is the policy of silence and secrecy, indeed, with regard to the whole process that makes it absolutely inconsistent with every standard of public duty and political integrity. If the newspapers published and the public read even the debates, empty of significance as they generally are, the entire country would presently realize how flagrant the whole make-believe is. The committees under whose guidance the bills are put through the Houses disclose nothing that is not wrung from them by members who have made investigations of their own and who insist upon having their questions answered; and there are few enough who have the audacity or take the trouble. But here and there a fact is dragged out, and before the encounters of debate are over enough has been brought to the light to make extremely instructive reading. It is devoutly to be wished—merely to cite examples—that every voter in the United States had read, or would yet read, the

THE TARIFF MAKE-BELIEVE

debates in the Senate on the duty on electric carbons—the carbons used in the arc-lights in all our cities—and on the duty on razors. Every detail is a commentary on the whole depressing business.

One extraordinary circumstance of the debates in the Senate should receive more than a passing allusion. The Republican party platform had promised that the tariff rates should be revised and that the standard of revision should be the differences between the cost of producing the various articles affected in this country and in the countries with which our manufacturers compete. One of our chief industrial competitors is now Germany, with its extraordinary skill in manufacture and the handicrafts and its formidable sagacity in foreign trade; and the Department of State, in order to enable Congress the more intelligently to fulfil the promises of the party, had, at the suggestion of the President, requested the German government to furnish it with as full information as possible about the rates of wages paid in the leading industries in that country—wages being known, of course, to be one of the largest items in the cost of production. The German government of course complied, with its usual courtesy and thoroughness, transmitting an interesting report, each portion of which was properly authenticated and vouched for. The Department of State placed it at the disposal of the Finance Committee of the Senate. But Senators tried in vain to ascertain what it contained. Mr. Aldrich spoke of it contemptuously as “anonymous,” which of course it was not, as “unofficial,” and even as an impertinent attempt, on the part of the German government, to influence our tariff legislation. It was only too plain that the contents of the report made the members of the controlling faction of the Finance Committee very uncomfortable indeed. It undoubtedly showed, what independent private inquiries readily enough confirm, that the wages paid to skilled laborers in Germany are practically as great as those paid in the United States, the difference in the cost of living in the two countries being taken into consideration. To have made it public would have been to upset half the arguments for the rates proposed with

which the committee had been misinforming the country. It would no doubt have explained, for example, why the skilled grinders of Solingen do not think it worth their while to emigrate to America and oblige almost all razor-makers in other countries to send their blades to them to be ground—and many another matter left studiously undebated, unexplained, about which Senators had been asking for information. It would have proved that the leaders of the party were deliberately breaking its promise to the country. It was, therefore, thrown into a pigeonhole and disregarded. It was a private document.

In pursuance of the same policy of secrecy and private management, the bill was filled with what those who discovered them were good-natured or cynical enough to call “jokers”—clauses whose meaning did not lie upon the surface, whose language was meant not to disclose its meaning to the members of the Houses who were to be asked to enact them into law, but only to those by whom the law was to be administered after its enactment. This was one of the uses to which the “experts” were put whom the committees encouraged to advise them. They knew the technical words under which meanings could be hidden, or the apparently harmless words which had a chance to go unnoted or unchallenged. Electric carbons had been taxed at ninety cents per hundred; the new bill taxed them at seventy cents per hundred *feet*—an apparent reduction if the word *feet* went unchallenged. It came very near escaping the attention of the Senate, and did quite escape the attention of the general public, who paid no attention at all to the debates, that the addition of the word *feet* almost doubled the existing duty.

The hugest practical joke of the whole bill lay in the so-called maximum and minimum clause. The schedules as they were detailed in the bill and presented to the country, through the committees and the newspapers—the schedules by which it was made believe that the promise to the country of a “downward” revision was being kept by those responsible for the bill, were only the minimum schedules. There lay at the back of the measure a maximum provision about

THE TARIFF MAKE-BELIEVE

which very little was said, but the weight of which the country may come to feel as a very serious and vexatious burden in the months to come. In the case of articles imported from countries whose tariff arrangements discriminate against the United States, the duties are to be put at a maximum which is virtually prohibitive. The clause is a huge threat. Self-respecting countries do not yield to threats or to "impertinent efforts, on the part of other governments, to affect their tariff legislation." Where the threat is not heeded we shall pay heavier duties than ever, heavier duties than any previous Congress ever dared impose.

When it is added that not the least attempt was made to alter the duties on sugar by which every table in the country is taxed for the benefit of the Sugar Trust, but just now convicted of criminal practices in defrauding the government in this very matter; that increased rates were laid on certain classes of cotton goods for the benefit, chiefly, of the manufacturers of New England, from which the dominant party always counts upon getting votes, and that the demand of the South, from which it does not expect to get them, for free cotton bagging was ignored; that the rates on wool and woollen goods, a tax which falls directly upon the clothing of the whole population of the country, were maintained unaltered; and that relief was granted at only one or two points—by conceding free hides and almost free iron ore, for example—upon which public opinion had been long and anxiously concentrated; and granted only at the last moment upon the earnest solicitation of the President—nothing more need be said to demonstrate the insincerity, the uncandid, designing, unpatriotic character of the whole process. It was not intended for the public good. It was intended for the benefit of the interests most directly and selfishly concerned.

There was noticeable confusion in the counsels of the dominant party. Some said this, some said that. Many were anxious, probably a majority in the House, to fulfil in entire good faith the promise their party convention had given in its platform and the President had so frankly interpreted and repeated; others

were willing, some were eager, to evade it. Their leaders led them by the way of evasion. I do not know whether they were conscious of doing so or not. It need make no difference to the country whether they were or not: it is only the fact that interests it, however the fact may affect individuals. If the leaders of the Republican party were not aware that they were seeking a way of evasion, they have an unusual capacity for deceiving themselves; if they were, they did not deal honestly by the country. Either alternative proves them wholly unserviceable and untrustworthy. We need not stop, therefore, to choose between the alternatives, for we are not discussing their characters, but the present interests of the country with regard to the tariff. The question that interests us is this: How out of this confusion of counsel was an agreement reached, and why was the agreement that which the leaders of the House desired rather than that which the rank and file of the party would have honestly preferred? What, when its policies are in debate within its own ranks, finally determines the course the Republican party will take in a matter like this?

I know, of course, as every one does, how great the power of the Speaker of the House is, and the great and sinister hold the chairman of the Finance Committee of the Senate has upon the legislative machinery of that body, whatever signs of apparent independence it may show in the open processes of debate. It is a matter of common knowledge what Mr. Cannon and Mr. Aldrich would prefer to have the House do when any question of this sort is under consideration. But these men represent forces, they do not constitute them. The forces that control the Republican party lie outside of them. They are only the spokesmen of those forces. Why do the rank and file of the Republican members still, in this day of change, find themselves unable to make an independent choice in a matter like this, of capital importance to their party and to the country? They do not mistake the signs of the times. Why, then, are they impotent?

The question can be answered very frankly, and, I hope, without partisan

THE TARIFF MAKE-BELIEVE

bias and without offence to honorable men whose principles I would not presume to call in question. The Republican party is old at the business of tariff-making, and has established a business constituency. Its leaders feel that they must satisfy that constituency, and they force their followers to follow them by very concrete and practical arguments. It has come to a point where they have grown very stubborn and short-sighted in their loyalty to their constituency, but that is hardly to be wondered at. The loyalty is of long standing, and has become a fundamental asset, as it seems to them, of party business.

The business of tariff-making naturally grows more and more complex, naturally comes to involve a greater and greater complexity of interests. Those who conduct it extend their clientage from generation to generation, to make sure that they have clients enough. Whatever principle may underlie tariff-making, and however valid that principle may be, however fundamental to the general development and prosperity of the country, tariff schedules arranged for "protection" are governmental favors. Those who make them, though acting for the nation, are the patrons of the industries favored: they dispense the largess of the government, and those who receive the favors will be their partisans and followers so long as the favors continue. The relation cannot be avoided. The only thing that can be avoided is the corrupting influence of the relationship, and that can be avoided only by very strong men. A political party cannot withstand it for many generations together: cannot, I mean, withstand the gradual corruption of its will—the temptation to make use of the patronage it dispenses for the perpetuation of the power it derives from it, the unflinching support at the elections of the wealthiest and most influential classes of the country.

Here, in a protective tariff, are the entrenchments of special privilege, and every beneficiary will of course crowd into them on the day of battle, determined to keep his own. Shall a man not defend what he has?

I am not seeking to point a moral. Neither am I drawing up an indictment

of the Republican party. I am merely outlining the natural history of a governmental policy whose prime object is to make particular industries safe against competition. Parties are capital epitomes of human nature; and I dare say that any other party that espoused this principle of legislation would use it for party advantage in the same way. My point is rather how it has been used than who has used it. Its uses and effects are plain—painfully plain now. Its use is to extend to certain undertakings government favor and assistance; its effect has been to build up special privilege. No doubt the country will have to hold those responsible who managed the business; but its real interest will not be in punishing them, many of them honest and public-spirited enough, but in getting rid of special privilege. That it has made up its mind to do. It now only seeks the best and most effectual way.

It sees plainly enough, at last, that the place to begin is the tariff. That it saw before the last Presidential election; but Mr. Cannon and Mr. Aldrich have managed between them to make it more evident than ever before. They have executed their purposes, not wisely, but too well. A day of judgment is at hand.

"The sword of Heaven is not in haste to smite,
Nor yet doth linger."

The purpose of the people has much the same habit. Perhaps it is the sword of Heaven!

It is not a question of schedules. It is possible that by reasonable schedules—by a minimum of favoritism and make-believe—the tariff-makers of the special session might have quieted the country—might have induced it to let the troublesome and perplexing subject drop for a decade or two. But it would have been only a stay of judgment. The essential wrong would still have cried out to be righted. And the essential wrong is this: that, except for a few men who have been fairly hypnotized by a system which they have accepted as political gospel since their youth, it has ceased to be a matter of principle at all and has become merely a method of granting favors. The favors are obtained in two ways—by "influence"

THE TARIFF MAKE-BELIEVE

and by supplication of a kind for which there is no classical or strictly parliamentary designation. In the vulgar, it is called "the baby act."

What "influence" consists of is a very occult matter, into which the public is not often privileged to inquire. It is compounded of various things, in varying proportions: of argument based upon the facts of industry and of commercial interest, of promises of political support, of campaign contributions, not explicitly given upon condition, but often spoken of by way of reminder, of personal "pressure" through the channels of old friendships and new alliances—of things too intimate to mention—though not, I believe, even in the minds of the most cynical and suspicious, of direct bribes. There is seldom any question of personal corruption. It is wholly a question of party corruptions, so far as it is a question of corruption at all.

The "baby act" consists in resorting to the Ways and Means Committee of the House and the Finance Committee of the Senate with pitiful tales, hard-luck stories, petitions for another chance, as the hosiery-makers did at the special sessions. It is an act very unpalatable to American pride, and yet very frequently indulged in with no appearance of shame. "Foreigners make better goods," is the burden of its cry, "pay smaller wages, and can add the ocean freights to their price and still beat us in our own markets." It often seems to mean that the foreigner has superior skill, uses better machinery, adapts his patterns more quickly to changing tastes, is more practised in economies of all sorts, and is content with smaller profits. And so a handful of American gentlemen go to Congress and beg to be helped to make a living and support their operatives. Some among them do not need the protection: they have perfected their processes and their stuffs, can afford by better organization and more studied economies to pay American wages and still beat the foreigner, if need be, in his own markets oversea. But the rest do need it to make good their failure. American labor is the most intelligent in the world, and when intelligently made use of is worth its extra wage, earns it without

affecting the market. But the government must support those who do not know how to use it as intelligently as their rivals, and the people of the country must be made to buy the goods they make at prices that will support them. This is indeed the "baby act," and these are easily recognizable as "infant industries"!

And so the question comes to be, What will the people say of this new system of the support of favored industries by the government, now that they have come to understand it? For it is a new system. The principle upon which the system of protection was originally founded was the development of the country, the development of the resources of the continent, and the skill of the people. That principle is intelligible and statesmanlike, particularly in a new country, without capital, and unprepared for competition in a trading world. The principle now proclaimed and acted upon, with show of patriotic fervor, is that profits must be assured to those who cannot stand competition after development, *after* the accumulation of capital in the country, the perfecting of skill and the full attainment of economic and industrial independence amidst the trading and manufacturing nations of the world. This is indeed a new theory, and will not bear examination.

Hamilton's position, the position of those who have intelligently and consistently followed him, is defensible enough. It is idle to bid a new nation on an undeveloped continent to put its faith in the natural laws of trade and production, buy in the cheapest and sell in the dearest market, build up its wealth on the demand for what it has, and buy what it has not. For it has not at the outset capital enough to find out either its resources or its capacities. There must be a waiting and a spending time at the first before it finds out what its resources are and what it can do with them. The farmer cannot expect a crop the first season from unbroken prairie or uncleared land. It costs money to put nature into shape to be profitably used. Deposits of ore do not constitute riches until the mines have been opened and machinery has been installed by which

THE TARIFF MAKE-BELIEVE

the ore can be readily and economically got out. That takes time and money. Even when the mines are opened and can be worked at a profit they produce only ore. The nation that cannot use its ores in manufacture is still a poor nation, however rich its deposits. Only a few men in it will be rich until other men in it get the capital and the opportunity to use the ores in manufacture. That, again, takes time and money. South Africa was not rich because a few men owned and worked diamond-mines in it. Taking the world at large and as a whole, how are you to know which is the cheapest market in which to buy or the most advantageous in which to sell, so long as a whole continent lies undeveloped, a whole nation untrained, so long as America or South Africa has not come into the markets with its hidden stuffs and its unschooled peoples?

This is the question for statesmen. Nobody now doubts that the policy of Hamilton put the nation under a great stimulation, gave it the economic independence it needed, immensely quickened the development of its resources and the powers of its people. Protected from the direct competition of those who had already acquired capital oversea, who had already become masters of industry and put hundreds of ships upon the sea, who had the stuffs to work in and the skill to work them, things took on a very different aspect for the enterprising spirits of the young nation from that which they had worn in the old colony days. Those who cared to venture upon enterprise—and who in America did not?—had the markets of a growing and industrious people to themselves. As the nation grew their trade grew, and their wealth—with their wealth their independence and their spirit of enterprise. It was wise—in the circumstances it was more than wise, it was necessary—to give the country an opportunity thus to find itself. It was necessary and wise to put it thus economically upon its own feet and make it worth its while to discover and develop its own resources.

It is perfectly consistent with such a policy, moreover, to give to every new enterprise, even in our day of America's abounding wealth and resourcefulness,

such protection as it may need to get its start and come to its proper perfection of equipment and operation, provided it be an enterprise suitable to America's soil or resources or capacities. So far as the policy of protection has for its object the diversification and enrichment of American industry, it is admissible, dangerous though it be, because liable to be used in a spirit of favoritism and for party ends. The only thing not consistent with the sound original policy upon which the single defensible theory of the system rests is the encouragement and support by "protection" of industries in their very nature not natural to America, but forced and artificial. Being artificial, not indigenous from the outset, they will need artificial stimulation to the end. Those who undertake them will always have to be supported out of the public purse—by the taxes laid at the ports.

But this original basis and theory of protection, this genuine enterprise of statesmanship, was long ago abandoned or forgotten by the leaders of the party that stood for the system. Its leaders no longer talk of "infant industries" to be carefully nurtured and brought to maturity for the sake of the nation and its development. They know the sort of smile with which such talk would now be received and do not relish the thought of it. They boast, rather, of the economic supremacy of America in the money markets, the steel markets, the foodstuff markets, the implement and machinery markets of the world, and naively insist that that supremacy should be maintained by import duties at the ports levied for the sake of those who are conducting our successful enterprises, in order to keep their profits safely up and make them feel that the country (which is, being interpreted, the party in power) will take care of them. It is not a system of stimulation or development; it is a system of patronage. Statesmen need no longer debate it: politicians of very ordinary managing abilities can easily keep it going. Indeed, it is no proper job for statesmen. It is a thing of lobbies and private interviews, not a thing of open debate and public policy.

Even this bad system worked no radical harm upon the country for a generation

THE TARIFF MAKE-BELIEVE

or two. The continent abounded in every kind of natural riches, individuals were greatly stimulated by the many inviting opportunities for manufacture and trade, the population of the country was growing by leaps and bounds, its domestic markets widening with every decade, its diversified industries enriching one another. The country was generously big and wide and various, its immense stretches extending into every climate of the temperate zone, its hills and valleys and high ascending western slopes inviting to every development of modern civilization. Its vast areas of free trade, trade absolutely without hindrance or restriction, guaranteed exemption from restraint by the interstate commerce clause of the Constitution, made it an incomparable field for rapid and normal development—a development about which, it turned out, there was almost nothing that was artificial and little that was not sound and lasting.

Moreover, those who had undertaken the great industries to which the customs legislation of Congress had given leave had not yet gone into combination. Enterprise was entered upon on individual initiative, was conducted by simple partnerships and small companies. There was a very active and quickening competition within the field of each undertaking that proved profitable. Those who succeeded had no more power than their mere wit at succeeding gave them. Fortunes were made, but upon a modern scale. The rich men of the country had only their local influence, and did not determine the industrial processes of a whole continent or the methods of a whole industry. The prosperity of the country wore a generous and democratic aspect and did not set classes off in sharp contrast against one another. There was favoritism in arranging the system of protection, of course, and individuals were very often thought of rather than the country as a whole. The "log-rolling" in Congress was very often spoken of in the newspapers and with a great deal of asperity. The system had its glaring faults and dangers. But it was at least a game into which almost any one could get. It did not yet wear the ugly face of monopoly or special privilege.

We look upon a very different scene now. It is no longer a scene of individual enterprise, of small bodies of capital embarked upon a thousand undertakings—a scene of individual opportunity and individual achievement—able men everywhere, singly or in small groups, making themselves the economic servants of communities and reaping the legitimate profit of many an enterprise their own brains had conceived. It was in that day that the industries of the country were originated and put upon a footing to succeed. In our later day those who control the great masses of capital swept together out of the multitudinous earnings of the last two or three generations have combined together and put at the head of every great industry a dominating corporation, or group of corporations, with an organization and resources which are irresistible by any individual competitor—by any competitor not supported by a like colossal combination of brains and means. The richest of those who enjoy the favors of the government have combined to enjoy a monopoly of those favors. Enormous fortunes are piled up for a few, for those who organize and control these great combinations; but they are relatively very few in number, and all men in their field of enterprise who are not in their combination are apt to become, first their crushed rivals, and then their servants and subordinates.

It is a very different America from the old. All the recent scandals of our business history have sprung out of the discovery of the use those who directed these great combinations were making of their power: their power to crush, their power to monopolize. Their competition has not stimulated, it has destroyed. Their success has not varied industry; it has standardized it and brought it all under a single influence and regulation—not the regulation of law, but the regulation of monopoly.

It is easy to exaggerate the iniquity of many of the things that have been done under this régime of the trust and the colossal corporation. Most of their methods were simply the old cut-throat methods of private individual competition on a new scale. What made them cruel and disastrous was not their kind,

THE TARIFF MAKE-BELIEVE

but their scope. Their kind was as old as economic history and rivalry in industrial enterprise, but their scale was new and ominous. The competition, the underselling, the aggressive canvassing, the rival expenditure, and rapid improvement of process possible to these men who had vast capital behind them, who shipped so much that every railroad stood ready to bid for their patronage with lowered rates, who could buy a competitor out at any price and stood always ready to buy at the moment of greatest strain and discouragement, could not be withstood. The field cleared before them. The power was theirs, and smaller men, smaller concerns, went down before them. They had "cornered" the opportunity which the government's favoring legislation had been intended to create.

Too much moral blame, it seems to me, has been laid upon the men who effected these stupendous changes. They were men of extraordinary genius, many of them, capable of creating and organizing states and empires. Commercial morals had not been adjusted, by themselves or any one else, to the new and unprecedented scale upon which they did business. Private consciences were pooled and confused and swallowed up in those huge combinations. Men were excited and blinded by the vast object they sought, and pursued it, as it were, impersonally, by means they would not have used had they been dealing simply and face to face with persons, and not merely upon paper with complex transactions, involving the business of a continent. It was a process in which commercial morals had again to find themselves, as in the days of treasure fleets and international spoliation.

But my present object is not to assess individual responsibility. I am describing conditions, not drawing up an indictment against those who created them or framing an excuse for them. I am studying a national policy and its effects; and about that, viewed in its present aspects, some things are very plain and ought to be plainly spoken of.

In the first place, it is plain that these new masters of our industry do not need the assistance or the "protection" of the government. They own or control a pre-

ponderant percentage of the resources of the country—of its mines, its forests, its cattle, its railways. They have brought the industries they control to a high state of perfection in equipment and organization, economizing their processes and improving their output. They have invaded foreign markets and sell to all the world, where there is no government to assist them, where, on the contrary, there are hostile tariffs to overcome. They have made themselves entire masters of the opportunity created for them. Manufacturers engaged in the same lines of industry elsewhere copy their machinery and imitate their methods. All the world is justly jealous of their huge success. Their balance-sheets, on the one hand, and the success and skill of their processes, on the other, show how little they need protection.

In the second place, no political party can afford to be their partners in business. It amounts to that. In the earlier days of protection, when import duties created opportunities for thousands of men, the political party that maintained the system of protection had all the nation for partner. The benefits of the system were widely distributed. Its beneficiaries could nowhere be assembled in a single lobby. Their names could be included in no possible list. They were the people of the country by sample. But now, as compared with the former thousands, they are few. The names of most of them are known everywhere. Their influence is direct, personal, pervasive.

They are doing nothing novel through the lobby. It is just what the beneficiaries of this dangerous system have always done. It would seem the natural process of obtaining protection—to ask for it and argue its necessity with the figures of the business in hand. But they are so few, so individually powerful, and command so many things that political parties need, or think that they need, for their success—money, widely extended influence, the gift and the use of business organization national in their scope and control! They have as powerful a machinery ready to their hand as the government itself. It is highly dangerous for the government to be in partnership with them in the great enterprise of developing the coun-

THE TARIFF MAKE-BELIEVE

try: their grip upon it can so easily become too direct and personal! The country cannot afford an alliance of private interest with governmental authority, for whatever purpose originally conceived, however honorably arranged at the outset. No body of business men, no political party, can long withstand the demoralizing influences of the relationship—particularly no body of men so compacted and unified in interest as those who manage and finance the trusts.

It is not necessary for my argument to claim or to prove that high protection created the trusts and combinations of our time. I believe that it can be shown that it did, though I am ready to admit that they might, and probably would, have arisen in any case, though in a different form and with different proportions. But that is a complicated question which may for the present be put upon one side. Certainly the trusts have now cornered the opportunities created by the system of high tariffs. They no longer need the assistance of the government; and it is highly desirable that there should be no alliance, and no appearance of an alliance, between them and either of the political parties.

That our industries are still greatly stimulated is evident enough. They are very vital and very prosperous. There is general employment; and when things go well and the money-market is not manipulated, or upset by our uncommonly bad system of currency, there is a general feeling of ease and hopefulness. But there is not general prosperity: that is a very different matter. When the great industrial and trade combinations can operate freely and without fear of disturbed prices and a frightened money-market, there is always ready enough employment for those who seek it—at wages forced up and maintained, not by prosperity or the good business of the great corporations, but by the aggressiveness and determination of organized labor. The country is given occupation by those who have cornered the privileges to be had under the favor of Congress, and their success is easily made to look like the reign of unbounded opportunity for the rank and file; but that does not increase the proportion of employers to employees.

The initiative and control are still with the few. Their money makes the mare go, and it is they who ride.

It does not do to think of these things with bitterness. It is not just to think of them with bitterness. They came about by natural process, not by deliberate or malignant plan. But it is necessary to point them out in plain language, to discuss them with candor, and to comprehend them, when the talk is done, with wide-open eyes. It is easy to fall into exaggeration. Not all the industry of the country is in the hands of great trusts and combinations. Only its main undertakings are, its largest and most lucrative enterprises. But the picture I have drawn is, in the rough, true and tends from decade to decade to represent the truth more and more perfectly and completely. If the tendency had worked itself out to its ultimate consequences, if it had accomplished its perfect work, it would probably be too late for reform. The body politic is still sound and still elastic enough to work upon; and many of the very men who have profited most by this new and ominous state of affairs are ready to join in the wholesome processes of reformation which will make opportunity general again—not a monopoly, but a universal stimulus.

The fact which has disclosed itself to us, in these later days of the country's awakening, is this, then. We have witnessed the partial creation, the almost complete creation, on the one hand, of a comparatively small privileged class or body of men, the men who control capital and the uses to which it is put and who have, as the representatives (as all too literally the representatives) of the business of the country, the ear of Congressional committees; and we begin to see, under them, associated with them, on the other hand, a vast unprivileged body ("class" is too definite and formal a word) which forces its way to a share in the benefits of our apparently prosperous conditions only by threats and strikes, and is steadily deprived of a large percentage of what it thus gains by rapidly rising prices which day by day increase the cost of living amongst us. And the rise of prices itself seems to be connected with the system.

There has been a rise in prices in al-

THE TARIFF MAKE-BELIEVE

most all the trading countries. The large recent increase in the supply of gold has had a great deal to do with it, here as elsewhere. Gold, the world's standard of value, having become cheaper because more abundant, more, of it is demanded in exchange for goods, whose value has not changed. But this universal phenomenon of the rise of prices has had its special features and vagaries in America utterly dissociated from the price of gold; and it would be easy to prove that those who have managed to get control of the greater part of the output of the mines and factories have, by combination, set the prices to please themselves. They have made the usual use of their opportunity. While the government has, by its high protective policy, spared them the anxiety of foreign competition, they have, by organization and agreement, spared themselves the embarrassment of any competition at all.

What, then, shall we do? Shall we adopt Through as our motto and sweep the whole system away, be quit of privilege and favors at once, put our industries upon their own resources, and centre national legislation wholly upon the business of the nation? By no means. The system cannot be suddenly destroyed. That would bring our whole economic life into radical danger. The existing system was built up by statesmanlike and patriotic men, upon a theory upon which even the most sceptical economist must concede it possible to found a valid and effective policy. It is very likely that by slower, sounder, less artificial means the country might have worked its way up to the same extraordinary development and success, the same overwhelming material achievement and power; but that is a question no longer worth debate by practical men. As a matter of fact, the method of artificial stimulation was adopted, has been persisted in from generation to generation with a constant increase of the stimulation, and we have at last, by means of it, come to our present case. It will not do to reverse such a policy suddenly or in revolutionary fashion.

It must in some conservative way be altered from decade to decade, if possible from year to year, until we shall have put

all customs legislation upon a safe, reasonable, and permanent footing. A process of alteration, steadily and courageously persisted in, will not disturb the business or embarrass the industries of the country, even if tariff act follows tariff act from session to session, if it be founded upon a definite principle by which its progress may be forecast and made ready for. Such a principle must be found. And the nation must find means to insist that, whatever party is in power, that principle shall be followed with courage, intelligence, and integrity. The present method and principle of legislation does not keep business equable or free from harassing anxiety. It is based upon no principle, except that of self-interest—which is no principle at all. No calculable policy can be derived from it. Discussion gives place to intrigue, and nothing is ever fixed or settled by its application.

What, then, shall the principle of reform be which shall hold us steady to an impartial and intelligible process? The old principle of Hamilton, in a new form and application: the very principle upon which the protective policy was set up, but applied for the purpose of reforming the system and bringing it to the test of a single definite object, its original purpose and energy having been fulfilled and spent.

Hamilton's purpose was to develop America, to give her industries of her own; to make it immediately worth the while of her enterprising and energetic men to discover and use her natural resources, the richness and extent of which even he never dreamed of; to enrich and expand her trade and give her an interior economic development which should make her an infinitely various market within herself; and to continue the stimulation until her statesmen should be sure that she had found her full vigor and capacity, was mistress of her own wealth and opportunity, and was ready to play her independent part in the competitions and achievements of the world. That object has been attained. No man not blinded by some personal interest or inveterate prepossession can doubt it. What would Hamilton do now?

In one sense, it is not a question of

THE TARIFF MAKE-BELIEVE

politics. It does not involve Hamilton's theories of government or of constitutional interpretation. Some of us are Jeffersonians, not Hamiltonians, in political creed and principle, and would not linger long over the question, What shall we do to return safely to Hamilton? It is not a Hamiltonian question. Constitutional lawyers long ago determined that it was certainly within the choice of Congress to lay import duties, if it pleased, with a view to the incidental benefit of traders and manufacturers within the country; and, if that incidental object has in later days become the chief and only guiding object of the rates of duty, that, I take it, is only a question of more or less, not a question which cuts so deep as to affect the power of Congress or draw it seriously into debate again. As a matter of fact, the policy was entered upon and has been carried—to what lengths we know. The Hamiltonian principle, not a political, but an economic principle, was the only wise and defensible principle upon which it could have been established. It is also the only wise and safe principle upon which it can be modified and in part got rid of. For when you have the general benefit of the country as your standard, you have a principle upon which it is as legitimate to withdraw protection as to give it.

It may seem like a vague principle, affording room for many varieties of contrary judgment; but it will be found to lose its vagueness when stated in contrast with the principle upon which Congress has acted in recent years. In all the recent tariff legislation of the country, in all legislation since 1828, the committees of the House and Senate, when making up the several schedules of duties they were to propose, have asked, not what will be good for the country, but what will be good for the industries affected, what can they stand, what rates of duty will assure them abundant profits? It is true that they have assumed—it has been the burden of innumerable weary campaign speeches—that the prosperity of the individual interest considered would be the prosperity of the country; but the poor sophistry of that argument has long been commonplace. By hard, desperately hard, use that assumption has

been worn through to the thread. It must be replaced by new and sounder stuff. No doubt you can say to the country, "Feed and sustain these corporations, and they will employ you: feed your employers out of the taxes, and they, in turn, will give you work and feed you." But no candid student of this great question can now confidently believe that a policy which has the profits of the manufacturers as its main object is likely to promote the impartial, natural, wholesome, symmetrical, general development of the country.

The men who happen to possess the field do not constitute the nation; they do not even represent it when they speak of their own interest. We have taught them, by our petting, to regard their own interest as the interest of the country; but the two are by no means necessarily identical. They may be, they may not be. It is a question of fact to be looked into. Their prosperity and success may or may not benefit the country as a whole. Even if the country be indisputably benefited, it might be still more highly benefited by the promotion of an entirely different interest. What the fact is may depend upon many circumstances. It is those circumstances we are bound to look into, if we be indeed statesmen and patriots, asking not what the protected interests want or can prove that they need, but what it is to the general interest of the country to do: whether some interests have not been too much favored, given a dominance not at all compatible either with honest politics or wholesome economic growth. In brief, we are now face to face with a great question of fact. What part of the protective system still benefits the country and is in the general interest; what part is unnecessary; what part is pure favoritism and the basis of dangerous and demoralizing special privilege? These are the questions which should underlie a tariff policy. No other questions are pertinent or admissible.

"The benefit of the country" is a big phrase. What do you mean by it? What do you mean by "the country"? *Whom* do you mean by it? If you are honest and sincere, you mean the people of the country, its sections and varieties of climate and population taken, not separately or by their voting strength, but

THE TARIFF MAKE-BELIEVE—THE FUTURE OF THE TARIFF

together; its men and women of every rank and quality and circumstance; its bone and sinew. If any particular industry has been given its opportunity to establish itself and get its normal development under cover of the customs, and is still unable to meet the foreign competition which is the standard of its efficiency, it is unjust to tax the people of the country any further to support it. Wherever the advantages accorded by a tariff have resulted in giving those who control the greater part of the output of a particular industry the chance, after their individual success has been achieved, to combine and "corner" the advantage, those advantages ought to be withdrawn; and the presumption is that every industry thus controlled has had the support of the government as long as it should have it.

There is something more than the economic activities of the country to be considered. There is its moral soundness; the variety, not of employment, but of opportunity for individual initiative and action which the policy of its law creates; the standards of business its trades and manufactures observe and are gauged by; and the connection which exists between its successful business men and its government. By these significant matters should the tariff policy of Congress be judged, as well as by the tests of successful business.

Only those undertakings should be given the protection of high duties on imports which are manifestly suited to the country and as yet undeveloped or only imperfectly developed. From all the rest

protection should be withdrawn, the object of the government being, not to support its citizens in business, but to promote the full energy and development of the country. Existing protection should not be suddenly withdrawn, but steadily and upon a fixed programme upon which every man of business can base his definite forecasts and systematic plans. For the rest, the object of customs taxation should be revenue for the government. The federal government should depend for its revenue chiefly on taxes of this kind, because the greater part of the field of direct taxation must be left to the States. It must raise abundant revenue, therefore, from customs duties. But it should choose for taxation the things which are not of primary necessity to the people in their lives or their industry, things, for the most part, which they can do without without suffering or actual privation. If taxes levied upon these do not suffice, the things added should be those which it would cause them the least inconvenience or suffering to dispense with. Customs thus laid and with such objects will be found to yield more, and the people will be freer.

There is no real difficulty about finding how and where to lay such taxes when once a just principle has been agreed upon, if statesmen have the desire to find it. The only trouble is to ascertain the facts in a very complex economic system. Honest inquiry will soon find them out, and honest men will readily enough act upon them, if they be not only honest, but also courageous, true lovers of justice and of their country.

THE FUTURE OF THE TARIFF

Robert P. Porter, author of the following article, which was published in *The North American Review*, was a member of the Tariff Commission of 1882, director of the United States Census 1889-93, and President McKinley's special commissioner to Cuba and Porto Rico in 1898-99. He has had much experience in tariff work. Besides assisting in the preparation of the tariff bills of 1883 and 1890, he framed and put into operation the first tariff for Cuba and Porto Rico, and aided the government

in preparing the tariffs for the Philippines and Guam. He was born in England, but came to America when a young man, and he has long been well known as a journalist, economist, and writer on public affairs.

The Future of the Tariff.—In May, 1897, I wrote an article for *The North American Review* on "The Dingley Tariff Bill," which was then pending. Eleven years later I am asked to write on

THE FUTURE OF THE TARIFF

the proposed tariff measure now under consideration by the Ways and Means Committee of the House of Representatives, which will probably be the nucleus of the Tariff Law of 1909. In the first article referred to it was pointed out that tariff legislation is "extra hazardous," and that statesmen undertaking such dangerous fiscal work must be prepared for the reaction. Every statesman since the war who has been called upon to revise the tariff has, except Mr. Dingley, wrecked either his party or himself or both before he accomplished his task. In bequeathing the tariff question to his successor, President Roosevelt has shown himself to be a politician of the first quality, for the framing of a tariff law constitutes the most difficult and complicated problem that statesmen and economists have to deal with. Nor do I speak entirely without authority on the subject. In 1882, as a member of the Tariff Commission which framed the law of 1883, I first realized the magnitude and ramifications of the tariff laws. Later, in 1890, it was my fortune to aid the late President McKinley in the statistical work connected with the tariff bill of which he was the author. Again, in 1898, as special commissioner of the United States, I had charge of the tariff work of both Cuba and Porto Rico, and framed and put into operation the first tariff laws of those islands. This familiarity with the subject has not inclined me to talk glibly, as some people do, on "tariff revision," to expatiate on "tariff reform," or to favor hasty and radical changes in the tariff schedules. No sooner had President McKinley promulgated the Tariff Law for Cuba (January 1st, 1899) than merchants, both in Havana and in the United States, began to appeal to me to change the rates and classifications. Such a course, however, would have become intolerable, and President McKinley finally issued an Executive Order which declared that, no matter what might be the individual hardship, the rates must remain unchanged for twelve months.

The folly of subjecting interests involving the whole business of a country—especially of one with nearly 100,000,000 population—to periodical changes of tariff, upward and downward, is manifest. When

once a tariff bill has been passed and becomes a law, it would be well if it were made a penal offence for a person—statesman, reformer, or otherwise—to talk "protection" or "free trade," not for a period of twelve months, but for a period of twelve years. The Dingley Law has now been in force for more than a decade, and there may be excuse for revising it. At the same time, it should be remembered that the country is just slowly recuperating from a serious financial panic, and that operations, even if performed by careful and skilful hands, are extremely dangerous when the vitality of the patient is low. But, in this case, the wise and the unwise in tariff affairs seem to agree that revision is necessary, and hence the work will proceed, let us hope, along lines that will evolve a reasonable and, above all, a permanent measure.

Those high protectionists who are now complaining that the reduction of the tariff will injure their particular industry and necessitate a decrease in wages have largely themselves to blame for the public sentiment which demands a reduction. The Dingley Tariff Law is a much more protective measure than was the McKinley Law. To offset the increased rates levied by the former, the reciprocity clause was enacted, which, the promoters of the bill urged, would enable the President to reduce rates twenty per cent. on the merchandise coming from countries willing to make similar reductions on American commodities entering their ports. Having made this clause do valiant duty in allaying criticisms during the discussion and debates on the bill, the period of its operation was limited to two years, and hence was not made co-terminate with the law. Acting in good faith, President McKinley and Secretary Hay appointed Mr. Kasson to prepare a number of treaties in order to secure the advantages of the clause while it was vital. Though eight of these treaties were negotiated (that with France being a particularly advantageous one to the United States), the high protectionists, who at the time controlled the Senate, refused to ratify any of them. These treaties were pigeonholed until the limitation in the Dingley Law permitting the President to make them expired, and all effort to re-

THE FUTURE OF THE TARIFF

vive or extend the so-called reciprocity clause was resisted. It was anything but a "square deal," and no one realized it more keenly than did the protectionist President and his able Secretary of State. Yet, speaking as a protectionist, I cannot but think that the Senate's policy was short-sighted. Had these reciprocity treaties been met with more hospitality by the Senate, there would now have been less adverse public sentiment arrayed against the tariff demanding, as President-elect Taft does, "both revision and reciprocity."

President McKinley's political insight made this clear to him, and, veteran maker of tariffs as he was, he did not hesitate to promote a policy which he believed to have become necessary. In his last speech at Buffalo he said:

"Our capacity to produce has developed so enormously and our products have so multiplied that the problem of more markets requires our urgent and immediate attention. . . . A system which provides a mutual exchange of commodities is manifestly essential to the continued and healthful growth of our export trade. . . . The period of exclusiveness is past. . . . Reciprocity treaties are in harmony with the spirit of the times; measures of retaliation are not. If perchance some of our tariffs are no longer needed for revenue or to encourage and protect our industries at home, why should they not be employed to extend and promote our markets abroad?"

If President McKinley had lived to carry out this policy, or had his successor been as deeply interested in economic questions as he is in "moral questions," the tariff by this time might have been removed from politics. If it is true that a high protective tariff encourages monopolies and creates trusts, a little more attention to this particular economic question on the part of the President might have reduced the number of "moral questions" which he has been called upon to deal with. In his first annual message Mr. Roosevelt asked the Senate to consider the reciprocity treaties laid before it by his predecessor. From that time the demand for their recognition became fainter and fainter, until no more was heard of it; and reciprocity, the

"handmaiden of protection," as Mr. Roosevelt described it in his first annual message, with the tariff itself, has been passed along to Mr. Taft, whose ability, courage, and tact may be put to an early test in the part of an arbitrator which he will be called upon to play between a newly elected House pledged to "honest tariff revision" and an unrepentant Senate as yet but partially converted to the "new order of things."

Conditions which now confront the legislators at Washington engaged in tariff revision differ materially from those existing in 1882, when the Tariff Commission brought order and harmony out of the chaos of the War Tariff, popularly known as the Morrill Law. Our important industries were then just beginning to stand alone, and European—especially British—competition was a real menace to some industries. Manufacturers of iron, steel, woollens and worsteds, pottery and glass, chemicals, silk, and some miscellaneous other products, were becoming better able to compete with their foreign rivals, and, while they were not so insistent on advances of rates, I recollect they rather strenuously opposed reductions. Other conditions were different. The trade complications and trusts had not developed to anything like the extent in which they exist to-day. The individual firms, or, rather, their representatives who gave evidence before the Commission, were, as a rule, able to weave into their testimony and statements a story of perseverance in overcoming difficulties and enterprise in establishing American home industries, and they evoked sympathy and to a reasonable extent deserved governmental encouragement. One illustration, perhaps the most picturesque, is sufficient to illustrate my meaning. Take Mr. Carnegie's testimony before a Tariff Committee which met twenty-five years ago and compare it with his evidence last month. Then he was an enterprising manufacturer anxious to develop a great industry this side of the Atlantic. Then he was a man with unbounded faith in the resources and possibilities of his adopted country—resources and possibilities which could only be brought into active operation by a bold policy of protection which declared that those indus-

THE FUTURE OF THE TARIFF

tries should be established here for the use and benefit of the American people, and that it was cheaper in the end to make and buy at home and employ American labor, even though the price were higher, than to import from foreign countries. These were sentiments that rightly affected the legislators. The situation to-day is different; for, as Mr. Carnegie has himself told us, the infant has grown to be a giant. The American iron and steel industry, taken as a whole, is firmly established; and even those actively engaged in it would not be foolish enough to admit that the trade requires the same protection as it did in the earlier stages of its history.

But it does not follow that it would be wise to transfer even the iron and steel schedule to the free list. Neither is it certain that the conditions of all industries established and protected by the tariff permit of an indiscriminate reduction in the rate of duty. A substantial reduction should be made on those articles in the manufacture of which America is strong, while on such articles as other countries lead in manufacturing a rate of duty should be maintained that will compensate American manufacturers for the difference in the cost of labor which exists largely because of the difference between the wages paid here and those paid abroad.

What is true in regard to the iron and steel industry may be true in a greater or less degree in regard to other schedules. The woollen and worsted schedules undoubtedly contain excessively high rates of duty, and the estimable gentlemen representing these interests have invariably failed, when requested, to take the public into their confidence as to the exact cost of manufacturing. Heretofore the *ex parte* statements of interested witnesses have been accepted, not through any collusion between the framers of the tariff law and the manufacturers, but because, as a rule, counter-statements were not offered, or, if offered, were proved, on examination, to be even less accurate than those furnished by the manufacturers themselves. No one would accuse such statesmen as Judge William D. Kelley, President McKinley, Representative Dingley, Senators Allison and Aldrich, and

many others who have had charge of a generation of American tariff legislation, of dishonesty of purpose. They have been largely occupied with the ambition of establishing as many diversified industries in this country as practicable, and with keeping the wages of American labor as high as possible. That the idea of a "full dinner-pail," employment for labor at good wages, and a prosperous country should have become part of the platform of a political party is not unnatural, and that the statesmen prominent in tariff legislation should be regarded as popular leaders of the party of protection may have been their reward.

But I am talking of the past. The future is both more interesting and more important. The country and its industries have outgrown the older methods of tariff revision. The personal element has disappeared. The men who struggled with the beginning of American manufacturing have, as a rule, been rewarded financially by the splendid growth of the country, and many of them have passed away, together with the capable statesmen who patiently listened to their stories and heeded their plea for protection. Many of those who are still with us, like Mr. Carnegie, are rich beyond the dreams of avarice, and no further sympathy need be extended to them. In their place we find, in many instances, large impersonal combinations, capable of utilizing all the modern methods of production, and able to hold their own in the world's struggle for industrial and commercial supremacy. The persistent sale in foreign markets of commodities produced by the American manufacturing trusts at a lower price than that maintained here has rightly caused great dissatisfaction at home and added much to the unpopularity of the tariff. Nevertheless, these trusts, representing as they do an immense army of American wage-earners, are entitled to be heard on their own behalf, and to a fair and just consideration on the part of the legislators. The protective system that brought them into existence cannot wisely be suddenly withdrawn. Extra care should also be exercised even in making "reasonable reductions" of the tariff during a period of temporary busi-

THE FUTURE OF THE TARIFF

ness stagnation. It should be borne in mind that these industries are part of our commercial fabric, and if those who control them are compelled to cheapen their output by the reduction of the rate of duty to an extent that will necessitate the discharge of hands or the reduction of wages, those now clamoring for tariff revision may turn and rend the revisionists, just as they did after the passage of the Wilson-Gorman Tariff Bill. Moderation should, therefore, be the watchword.

The moral aspect of tariff legislation has, at least to my mind, undergone as great a change in the quarter of a century under discussion as have the economic aspects. This was illustrated the other day during the discussion of the woollen schedule, when it was brought to light that a government servant now holding an important official position in Washington and a statistician of note, helped the Chairman of the Finance Committee of the Senate when the Dingley Bill was in the making, though at the time he held the position of secretary to the Woollen Manufacturers' Association. It is true he received no pay from the government for three months of arduous work, but public opinion, nevertheless, was shocked and surprised at the possibilities which the incident opened for corruption, and the newspapers not actually denouncing it decidedly disapproved of this method of tariff revision. As a matter of fact, it was only a little old-fashioned. In making up the Tariff Commission of 1882 President Arthur did not hesitate to appoint the secretary of this same organization, Mr. John L. Hayes, to the presidency of the Commission. The secretary of the Wool Growers' Association, Mr. Garland, was also a member of that Commission, while iron and steel, sugar and pottery, all had strong representatives in its deliberations. To be sure, free-traders objected to this, but the general public regarded it as they once did the "good old spoils system" as a matter of course, and went on their way unheeding. The bill those gentlemen prepared was, upon the whole, a fair one, alike to the protective interests, the importers, and the consumers. Nevertheless, the principle was wrong; and, with the public conscience awakened on the

question as it is to-day, no President would dream of making up a Tariff Commission on similar lines.

The present changed method of preparing for the work of tariff revision should show a great difference in the result. The Bill of 1883 was changed—for the worse, I think—in the Ways and Means Committee room; the McKinley Bill of 1890 was largely settled in Mr. McKinley's room at the Ebbitt House by protectionists; the Wilson Bill was the work of those interested in a low tariff. But the methods adopted were the same. The Dingley Bill was in process of formation when the high-tariff advocates were squarely in the saddle and McKinley himself in the White House. Here again the methods were practically the same, but the growth of the country made them more cumbersome. President McKinley had even then outgrown these methods, and he regarded the Dingley Tariff as too high in parts. I discussed it with him at the White House while it was under consideration, when he said to me that he hoped Mr. Dingley would have no rates of duty higher than those of the McKinley Tariff. As to whether Mr. Dingley did have or not, a comparison of those two measures would tell, but subsequent events, together with the extract from Mr. McKinley's last speech before quoted, show that, before his tragic death, Mr. McKinley believed the modification of certain schedules would not be injurious to American manufacturing industries.

The recent hearing before the Ways and Means Committee indicates a broader method of treatment. In the testimony the *pros* and *cons* of the tariff question have been more distinctly brought out than has been the case at any inquiry of the kind within my recollection. The official data bearing on the subject in possession of the committee, I have been given to understand, are reliable and complete. Such trustworthy data will be very necessary if the committee propose to act on the promises of the Republican platform in framing the tariff of 1909, and to "maintain the true principle of protection while so adjusting the rates of duty as to equal the difference between the cost of production at home and

THE FUTURE OF THE TARIFF

abroad," always bearing in mind "a reasonable profit to American industries." A more complicated and difficult task it would be impossible to imagine. Perhaps a general rate of difference in wages could be established and that rate be taken as the maximum rate of duty for the new schedules. But, whatever plan is agreed upon, it is almost sure to antagonize some interests, and those interests will naturally do their best to convince Congress that their business has been seriously injured.

The proposed feature of maximum and minimum rate of duty I approve and hope to see incorporated in the new law. It is merely another way of carrying out the original intention of the Dingley Law when the reciprocity clause already referred to was inserted. The public demand for such outlets for trading with other countries—a demand which secured the insertion of the maximum and minimum clauses in the national Republican platform at Chicago—indicated that the practical nullification by the Senate of the reciprocity principle offered in the Dingley Law has been disapproved by the country.

In forecasting what I thought the Dingley Bill should be I used the following language, which I quote, as it applies to the measure now in course of preparation:

"So our tariff should be high enough to make up for the difference in wages paid here and abroad. It should be sufficient to protect American industry and American labor. It should, moreover, be just and equitable to all branches of industry. Irritating duties, unimportant

from a revenue point of view, such as duties levied on scientific apparatus and books for schools and colleges and libraries for educational purposes, including all works of art, may with safety be avoided. There should be no discrimination. And, lastly, it must be framed from the foundation with a view to revenue necessities of the government."

In conclusion, let me endorse the idea—namely, that a permanent commission should at once be appointed for the purpose of investigating and suggesting to Congress, from time to time, changes in both the administration and classification of the tariff law and in the schedules of rates. Only in this way can the tariff be taken out of politics, as it should be, for the country is now too large and the interests involved too vast to permit of a fluctuating tariff policy. A permanent non-partisan commission could investigate and annually recommend to Congress the necessary changes. Then the tariff itself is constantly changing. That is, a specific duty of so much per pound, or other unit, to-day may be a reasonable rate, but should the price of the article be cheapened it gradually becomes a high or even unreasonable rate. Such a commission could also furnish Congress with exact information in relation to the sale of articles (the manufacture of which is protected by the tariff in America) in foreign markets at prices greatly below those charged the domestic purchaser. To what extent the formation of trusts tends to create monopolies, control the market, or enhance the cost of commodities to the home consumer is a vital question to be answered by practical inquiry.

PERPLEXITIES OF TARIFF REVISION

Albert H. Washburn, the author of the following article, which appeared in *The North American Review*, is a native of Middleboro, Massachusetts, and was graduated from Cornell University in 1889. For several years he was United States Consul at Magdeburg, Germany. He has also served as Assistant United States Attorney for the District of Massachusetts and as special government counsel in customs cases.

Perplexities of Tariff Revision.—The attitude of the two great parties on the tariff during the Presidential campaign—one declaring "unequivocally" for revision at a special session to be called immediately after March 4, the other through the Denver platform welcoming "the belated promise of tariff reform" made at Chicago—foreshadowed some months ago impending tariff changes. A small margin of ante-election doubt

PERPLEXITIES OF TARIFF REVISION

was wholly wiped out by the choice of a President and a Congress in political accord with each other. Indeed, the official death-warrant of that somewhat venerable measure known as the "Dingley Act" is now in actual preparation. Before it can be signed, however, the present tariff will have had a longer lease of life than any of its prototypes—not excepting the Walker Tariff of 1846, which remained for eleven years on the statute-books with unimportant modifications.

The fact that the main stream of our national income flows from duties upon imports makes tariff revision serious business at all times. For the fiscal year ended June 30, 1907, which reflects fairly the growth of the past decade, our total income, excluding postal receipts, amounted to \$665,306,134.92, of which a little over half, \$333,230,126.49, consisted of customs income. The shrinkage of nearly \$60,000,000 in revenue from the same sources during the fiscal year recently ended is accounted for to the extent of approximately \$47,500,000 by the falling off in duties, notwithstanding that, of the nearly \$600,000,000 collected, something in excess of \$285,000,000 consisted of customs receipts. These figures show how largely the tariff is the keystone of our fiscal arch. They give us, too, some hint of the magnitude of the responsibility involved in any sweeping revision.

Tariff legislation is committee legislation in its early stages; in its final stages it is largely Senate legislation. Revenue measures must originate in the legislative branch nearest the people—so runs the Constitution, and we still carefully observe the ancient forms. The Ways and Means Committee drafts the bill which is reported to the House. The preliminary work of revision is usually done some months in advance of the assembling of the enacting Congress. Public hearings are held and the Committee is flooded with advice, suggestion, and recommendation, much of it of uncertain value, which is published in bulky volumes and presently consigned to oblivion, thereafter to be resurrected occasionally as an infrequent aid to a federal court in determining what was in the legislative mind when it adopted some particularly ambiguous schedule.

It is safe to say that the work that counts in tariff-building is not done in this way. From March, 1875, when Speaker Blaine retired, down to the Fifty-first Congress of "Czar" Reed, which was elected with Harrison in 1888, the Republican party controlled the Lower House for two years only—and that was the Congress which it managed to pull through with Garfield in 1880. During the life of this Congress a tariff commission, consisting of nine Commissioners taken from civil life, was appointed to gather expert information. This body travelled about the country by easy stages, visiting the great industrial centres and making copious notes of what it heard and saw. It filed with the Speaker of the House a voluminous report prepared with great care and evidently intended to inform and instruct. It is apparent from the tenor of its recommendations that the commission hugged the delusion that a grateful Congress would make haste to enact into law the results of its toil and sacrifice, but the chief historical interest which this public document possesses lies in its total lack of resemblance to the Act of March 3, 1883. Then, as now, the real work was done *in camera*.

Of much more human interest, measured by practical standards, is the nature of the information supplied the committees of the House and Senate by various tariff experts, notably members of the Board of General Appraisers. The members of this tribunal—nine in number—are clothed with original jurisdiction of all customs disputes, except those growing out of seizure. They are now vested with the powers of a United States circuit court, enjoy practically life tenure, and determine with more or less finality the classification and value of imported merchandise. To these men, more perhaps than is generally supposed, members of the House and Senate have of late years turned for expert information concerning the different schedules.

In anticipation of coming revision, a large amount of data has been collected for the use of the House and Senate. Its quality, taken as a whole, is understood not to be altogether satisfactory, but one feature of it is probably superior to anything hitherto attempted on like occasions.

PERPLEXITIES OF TARIFF REVISION

Each paragraph of the tariff has been carefully annotated with all the judicial decisions construing it, and phraseology to meet these decisions (especially those adverse to the government) has been suggested, there is excellent ground for believing, by general appraisers and other officials.

If the work of revision should halt at this point, the result, of course, would be mere patch-work. Extreme Stand-patdom may hail such a policy as the highest wisdom, but it is likely to be overruled. It is precisely at this point, however, that the preparatory tariff work shows signs of breakdown. It is now freely admitted that the interrogatories which were prepared last summer to aid our consuls and special agents in their efforts to ascertain the cost of production abroad have been singularly barren of results. Foreign manufacturers are reported to be reluctant to open up their books and analyze their costs of production, especially when the advantages to them from such a course are decidedly dubious.

Confronted by a "conspiracy of silence" abroad and by the avarice of a certain type of domestic beneficiary at home, the Committee's plight is serious, for upon the thoroughness and accuracy of this kind of information the theory of a just scale of compensatory duties rests. Moreover, if it would do its full duty, the Committee must comply with another condition quite as difficult of fulfillment. It must grope in the twilight land of modern industrial management to construe and fix the "reasonable profit" guaranteed by the Chicago platform.

All this presents one of the strongest reasons that could be advanced for the establishment of a permanent bureau of experts who shall devote their time to the study of comparative trade conditions. If protection is to continue to be the settled national policy, the necessity for some such cog in our system is, however, very real—more pressing, even, than the altruistic demand for the creation and multiplication, at this juncture, of separate federal courts of review. This need not involve any legislative abdication whatever. It is probable that no really scientific tariff, well balanced and consistent throughout, will ever be devised

so long as we cling to the present haphazard methods. The German Conventional Tariff now in force is said to have been the outcome of five years of unlimited labor by a government commission which collected and classified every available scrap of expert evidence. With a task quite as herculean, and involving, from present indication, some adoption of the maximum and minimum idea, we are seeking to do the same work after a preliminary preparation of something like five months.

In one respect, the formal beginnings of revision have not been happy. The announcement the day after election of immediate public hearings was so sudden to the uninitiated and the time allotted so scant that many sceptical persons promptly concluded that the whole programme was cut and dried. It was asserted and believed in some quarters that there was to be a "bogus" revision, and that the hearings were intended to be perfunctory only. The effect of all this was to discourage, at first, the offering of testimony. It was the more unfortunate because there was not the slightest ground for supposing that a single rate had been written in the new bill or agreed upon in advance. The suggestion of phraseology by experts is quite another matter. At best, it is but recommendation, with the rates left blank. The prevalence of any wide-spread belief that the new tariff is prejudged can only hamper the committees of the House and Senate in their task, already sufficiently hazardous, of framing a bill which shall meet reasonable public expectation.

After a bill comes out of the Committee of the Ways and Means it runs the gantlet of the House, which is not so formidable as it may sound. Most of the recent measures have passed after a meagreness of debate upon the merits and an absence of amendment which would indicate a striking unanimity of view, were it not the perfect flower of a system of cloture which an unwieldy membership has made possible. From the House itself the bill goes to the Finance Committee of the Senate, which may, if it chooses—and it sometimes chooses—retain little of the original House measure save the enacting clause. In the Senate, where debate is

PERPLEXITIES OF TARIFF REVISION

unlimited. the first real debate takes place. The members of the party in opposition resolve themselves into a Court of Inquisition, and proceed to inquire and discuss until they are content to give the "unanimous consent" requisite to a final vote. All the multitude of amendments which slumber unoffered for lack of opportunity on the desks of House members may be proffered here without hindrance—the great majority all in vain. Finally comes the all-important Joint Conference Committee on the part of the two branches, where there is usually much mutual recession, calling sometimes for the entire redrafting of paragraphs and schedules to meet the criticisms and objections of the final framers. Amendments may be offered at any stage, and a certain number, more or less crudely drawn, find their way into the body of the bill before it goes to conference. It is upon this Committee that is cast—with such expert aid as it cares to command, of course—the stupendous labor of sifting and comparing inconsistent provisions, restoring the nice adjustments between rates on raw materials and finished products wherever they have been disturbed, and finally grouping the paragraphs and schedules into the proper perspective. Even with this vigilance every bill is more or less marred by inconsistency and contradiction.

The one notable exception to this method of procedure was in 1894, when the late Senator Gorman, of Maryland, speaking for the Democratic malcontents who were dictating the Senate action on the bill of that year, solemnly notified Chairman Wilson and his confrères of the House that they could take the Senate bill without the dotting of an *i* or the crossing of a *t* or leave it—and the House yielded with a very wry face. The tariff measures which bear the names of McKinley and Dingley, in a lesser degree only, have the distinct Senate impress.

A few years ago an eminent though somewhat unfriendly foreign critic of our institutions complained that there is no debate worthy of the name accompanying the enactment of a new tariff, that on the economic or fiscal merits hardly a thought is bestowed, and that our chief concern is to satisfy and reconcile the clamor of

local interests. This criticism, like so many other superficialities, contains only a half truth. The tariff is doubtless more of a local question than was generally believed when General Hancock made his now famous announcement of the campaign of 1880, but no measure can be justly taxed with being entirely devoid of all sense of economic or fiscal proportion. If it were possible, of course, to found an ideal state where everybody thought alike and where there were no jarring interests, some dominating mind might very likely evolve a perfect bill. But no tariff bill can possibly be the product of one mind, no matter how dominating. It is begotten of the fierce conflict of many interests and many minds, and therefore far from perfect.

That a tariff debate does not yield much that is informing to the economic student need occasion little surprise, even to the intelligent foreign critic. Aside from a very lively appreciation of the demands of his district or State, the average member of Congress has little more real insight into the intricacies and niceties of the different paragraphs composing a schedule than has the Grand Llama, and this must be so. An apt illustration, only one of many, is found in the steel schedule. It sufficed formely to group wire in the same paragraph with numerous other articles.

Thus we find this language in the Act of 1862:

"On steel in ingots, bars, sheets, or wire, not less than one-fourth of an inch in diameter, valued at seven cents per pound or less, one-fourth of one cent per pound; valued at above seven cents per pound and not above eleven cents per pound, one-half cent per pound; valued above eleven cents per pound, and on steel wire and steel in any form, not otherwise provided for, five *per centum ad valorem*." Here was a simple provision compared with the highly specialized separate wire paragraph of the present Act:

"137. Round iron or steel wire, not smaller than No. 13 wire gauge, one and one-fourth cents per pound; smaller than No. 13 and not smaller than No. 16 wire gauge, one and one-half cents per pound; smaller than No. 16 wire gauge, two cents per pound, provided

PERPLEXITIES OF TARIFF REVISION

that all the foregoing valued at more than four cents per pound shall pay forty *per centum ad valorem*. Iron or steel or other wire not specially provided for in this Act, including such as is commonly known as hat wire, or bonnet wire, crinoline wire, corset wire, needle wire, piano wire, clock wire, and watch wire, whether flat or otherwise, and corset clasps, corset steels, and dress steels, and sheet steel in strips, twenty-five one-thousandths of an inch thick or thinner, any of the foregoing, whether uncovered or covered with cotton, silk, metal, or other material, valued at more than four cents per pound, forty-five *per centum ad valorem*, provided that articles manufactured from iron, steel, brass, or copper wire shall pay the rate of duty imposed upon the wire used in the manufacture of such articles, and in addition thereto one and one-fourth cents per pound, except that wire rope and wire strand shall pay the maximum rate of duty which would be imposed upon any wire used in the manufacture thereof, and in addition thereto one cent per pound; and on iron or steel wire coated with zinc, tin, or any other metal, two-tenths of one cent per pound in addition to the rate imposed on the wire from which it is made."

It requires but slight study to show that this provision was intended to protect the wire-drawing industry of the United States and to provide a progressive increase in duty dependent upon advancement in manufacture. Only a technical expert could have suggested the form of such a provision.

This growing complication in modern tariffs has made revision, in its details at least, more and more the work of the expert and less and less the work of the legislator himself. Indeed, it is only a corporal's guard now, with Senator Aldrich pre-eminently at its head, and a dwindling corporal's guard at that, with the passing of Mr. Dingley and Senators O. H. Platt and Allison—that may be said to be thoroughly familiar with tariff anatomy.

From the moment a bill is reported to the House and its provisions published to a waiting world, up to its last hour in conference, the interest in the outcome is intense. Some of the criticism is aca-

demic, in the sense that it proceeds from persons who are disinterested and who view a tariff as good or bad according as it approaches their ideal of protection or free trade. All this no doubt has its useful side, but has little effect upon the work in hand. Party policy having decreed the measure, party discipline is adamantine.

There is quite another form of attack which is not precisely inspired in the interest of pure dogma. It proceeds with some directness and insistence from those immediately affected. When one of the most powerful of human motives—self-interest—is in action the spectacle is not always edifying. But, after all, it is very human, for the mental attitude of men who see, or fancy they see, their business imperilled by a proposed rate of duty is hardly likely to reflect calm indifference. Manufacturer and importer alike are vitally interested, and common business prudence compels them to heed every change likely to affect them directly or remotely. Neither can afford to ignore the march of events, and both are more or less constantly on guard.

The forces representing domestic interests are, as a rule, the most effective and the best disciplined. They long ago learned the value of organization and intelligent concerted endeavor. Somehow, the efforts in the name of the importer are apt to be less telling. Perhaps this is partly because the importing portion of our population is not a potential force outside of New York City; perhaps its political activity is more circumscribed. Whatever the reason, the fact is undoubted.

No schedule illustrates better the truth of this than that which relates to wools and woollens. The necromancy of the "political shepherds" in any legislation affecting the tariff has long excited the admiration of the envious. Nothing suspected of containing a fiber of wool, whether in a raw or manufactured stage, escapes attention. The average rate of duty on raw wool approximates forty per cent. It is, however, not so much the rate, as burdensome as it is to many domestic woollen manufacturers who require grades of wool that cannot be grown here, which makes the importation

PERPLEXITIES OF TARIFF REVISION

of raw wool a doubtful enterprise. It is rather the system of progressive specifics based on value. For example, wool of a certain condition, with a foreign market value of less than twelve cents a pound, pays four cents a pound duty, while it pays seven cents a pound if worth more than twelve cents. The determination of the market value rests with the customs officials in the first instance, and with the Board of General Appraisers finally. Not infrequently a decision that the market value of such wool is a very small fractional part of a cent over, though conclusively shown to have been purchased under, twelve cents, has operated not only practically to double the duty, but also to pile up fines and penalties because of technical undervaluation so stupendous in size as to cripple, if not actually ruin, the consignee.

The word "wool," moreover, is most comprehensive in scope, and is made so by the explicit language of the tariff. For a long time skins containing patches of mocha hair which had cost more to remove than the hair was worth as a commercial commodity—the skin used in the manufacture of glove leather being the thing that was valuable—was assessed at the wool rates, until the United States Supreme Court reversed the practice about a year ago.

Expressed in terms of *ad valorem* equivalents, some few of the rates on woollen manufactures exceed 150 per cent., and a numerous variety of articles take rates above 100 per cent. The average rate on manufactures of wool is estimated at about ninety per cent. This result is accomplished under the cloak of a mixed specific and *ad valorem* system, which conceals admirably many rates that are in effect prohibitory. It is a familiar principle running through most tariffs to assess merchandise according to the component material of chief value, but the provisions in the wool schedule for articles of wearing apparel of every description, and manufactures generally, wholly or in part of wool, are so adroitly worded that their drag-net provisions catch such foreign articles as cotton quilts having a fringe of wool, and even paper mottoes embroidered with wool, insignificant alike in quantity and value.

There can be little doubt that the wool schedule, like the steel, will be one of the storm-centres of revision.

The revenue aspects of a tariff must always be kept constantly in view. It is, of course, axiomatic that the degree of prosperity has a marked influence upon the volume of receipts. It is perhaps unfortunate that revision follows a period of sharp, if temporary industrial depression, and at a time when the serious falling off of revenue threatens a deficit of alarming proportions. This circumstance, while it can scarcely fail greatly to embarrass, will not of necessity defeat a thorough overhauling of existing schedules.

The party in power in its formal written platforms, and through the speeches of its recognized leaders, has often declared that it is not wedded to any particular set of schedules, but its latest pledge for revision is not necessarily to be confounded with drastic reduction. The Republican candidate, in his letter of acceptance, indicated a belief that, if some rates were too high, others were too low. It ought to be said, however, that every authoritative utterance of Mr. Taft since his election arrays him on the side of a thorough and scientific revision, wherever that may lead. It is significant that the Wilson Act of 1894, which was originally offered as a "reform" measure, contained many substantial advances. If the pruning-knife is to be wielded with any vigor upon schedules suspected of harboring abuses, the loss of revenue which will result from this operation must, if present conditions continue, be made up in other directions. This supposed loss will in some instances doubtless be more apparent than real, for it should be said in this connection that an examination of the annual receipts derived from the rates imposed by many paragraphs in the present act will prove conclusively that, though high, they are not revenue-producing, for the simple reason that they are in effect prohibitory. It may be accepted as absolutely certain that a substantial increase in revenue, perhaps sufficient to balance losses elsewhere, would flow from a readjustment of these prohibitory duties to a point which would permit wherever possible a reason-

PERPLEXITIES OF TARIFF REVISION

able volume of importation, and at the same time "equal the difference between the cost of production at home and abroad, together with a reasonable profit to American industries"—in accordance with the latest utterance of protection.

It is an interesting and instructive fact that political disaster has often followed quickly in the wake of a new tariff law, sweeping from the place of power the party responsible for it and terminating abruptly, for a season, if not forever, many promising careers.

These are some of the reasons which combine to make any new tariff programme unattractive, not to say extra hazardous to its sponsors. But there is an added terror. The party in power must shoulder all the responsibility for prevailing conditions, and prevailing conditions are unfavorably affected in a marked degree by agitation, much contemporary argument to the contrary notwithstanding. The mere doubt and uncertainty which obscure the immediate future are in themselves enough to halt industrial activity, and while they last business looks on paralyzed and helpless. The halt may be temporary, but the following recovery and readjustment are sometimes, for reasons not readily explained, exceedingly slow.

It is not surprising that political expediency would defer action upon such a vexed question as long as possible, and that party leaders look upon tariff revision as a kind of Pandora's box which they dread to open.

Thomas H. Carter, United States Senator from Montana, has pointed out the difficulties in tariff revision, if that is held to be synonymous with tariff reduction, on account of the yearly increasing expenses of the government. He points out the possibility of curtailing pensions, which neither party will do; the abandonment of rural free delivery, thereby saving \$30,000,000, to which the twelve million farmers in the country would not submit, and of the improvement of rivers and harbors, the reclamation of arid lands, and public works generally, which the American people would not tolerate, etc. He concludes:

"In the last analysis, it will be found, on the closest possible inspection, that the little saving which can be made here and there, by practising the strictest kind of economy, will be more than offset by unavoidable additions incident to the normal expansion of the operations of the government.

THE TARIFF COMMISSION OF 1909

Tariff Commission.—SEC. 2 of the Tariff Act of 1909 provides that "from and after March 31, 1910, except as otherwise specially provided for in this section, there shall be levied, collected, and paid on all articles when imported from any foreign country into the United States or into any of its possessions (except the Philippine Islands, Guam and Tutuila) the rates of duty prescribed by the schedules and paragraphs of the dutiable list of Sec. 1 of this Act, and in addition thereto 25 per cent. ad valorem, which rates shall constitute the maximum tariff of the United States. . . . To secure information to assist the President in the discharge of the duties imposed upon him by this section, and the officers of the government in the administration of the customs laws, the President is hereby au-

thorized to employ such persons as may be required."

Under this authorization President Taft on Sept. 1909, appointed the following persons to be members of the Tariff Commission and to perform the duties required by the act:

Henry Crosby Emery, professor of political economy at Yale University, chairman. James Burton Reynolds, assistant Secretary of the Treasury. Alvin H. Sanders, editor of the *Breeders' Gazette*, of Chicago.

The commission met for organization in the office of the Secretary of the Treasury at Washington on Sept. 24, 1909. It has since been actively engaged in the work assigned to it. The main investigation of the industrial effects of the tariff were divided into three main parts

TARIFF COMMISSION OF 1909—TA-RON-TEE

requiring three sets of investigators of different types. The first part is the collection of facts regarding each dutiable article, showing the character and localization of its production at home and abroad, statistics of output imports and exports, rates of duty reduced to ad valorem terms, and the like. The second part is the collection of data regarding costs of production at the mill. The third consists of obtaining information from the best experts available regarding home and foreign prices, local variations in each industry, and the general conditions of competition at home and abroad.

Summary of Legislation 1884-1909.—Morrison Bills—First bill in 48th Congress, Arthur's administration, proposed a horizontal reduction of 20 per cent., with free iron ore, coal, and lumber; defeated in House April 15, 1884, by vote of 159 to 155; House heavily Democratic and Senate Republican. Second bill in 49th Congress, Cleveland's first administration, similar to first bill, proposing free wool, salt, and lumber; defeated in House June 17, 1886, by a vote of 157 to 140; House Democratic, Senate Republican.

Mills Bill—50th Congress, Cleveland's first administration, provided for free lumber and wool, reduction on pig iron and abolition of specific duties on cotton; passed by House July 21, 1888, by vote of 162 to 149, but failed in Senate; House Democratic, Senate Republican.

McKinley Bill—Passed by 51st Congress, Harrison's administration, became law Oct. 6, 1890; high protective measure, though remitting duties on sugar and providing for reciprocity treaties; both Houses of Congress Republican.

Wilson Bill—Passed by 53d Congress, Cleveland's second administration, became law Aug. 17, 1894, without the President's signature; both Houses Democratic; measure reduced duties in some cases and made additions to free list, notably wool.

Dingley Bill—Passed by 54th Congress, McKinley's administration, approved July 24, 1897; passed by House 205 yeas to 122 nays, 27 members not voting; passed by Senate 38 yeas and 28 nays, 23 not voting; measure raised rates to produce more revenue, but was similar in many respects to the McKinley Act.

Payne-Aldrich bill passed at extra ses-

sion of 61st Congress, Taft's administration, approved Aug. 5, 1909; passed the House by a vote of 217 to 161 and the Senate by a vote of 45 to 34. The vote in the House was 195 yeas to 183 nays, twenty republicans voting in the negative and two democrats in the affirmative; in the Senate 47 to 31. In general the revision of the Dingley Act was in the direction of lower duties, but there were some increases.

Tarleton, SIR BANASTRE, military officer; born in Liverpool, England, Aug. 21, 1754; purchased a commission in the

SIR BANASTRE TARLETON.

British army (dragoons). At the beginning of the Revolutionary War he came to America, and was concerned in the capture of General Lee late in 1776. After the evacuation of Philadelphia, 1778, he commanded a cavalry corps called the "British Legion," and accompanied the troops that captured Charleston in May, 1780. He was one of Cornwallis's most active officers in the Carolinas and Virginia, in 1780-81, destroying Colonel Buford's regiment at Waxhaw Creek. "Tarleton's quarter" was synonymous with wholesale butchery. He was one of the prisoners at the surrender of Cornwallis. He published a history of his campaign in 1780-81. He died in England, Jan. 23, 1833. See BUFORD, ABRAHAM.

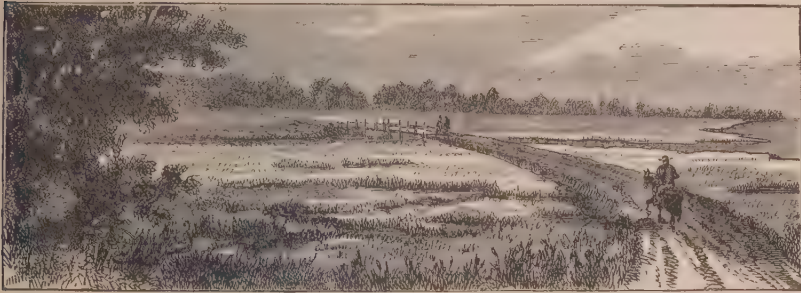

Ta-ron-tee, or Riviere aux Canards, SKIRMISH AT. Gen. William Hull cautiously moved, July 13, 1812, from Sandwich to attack Fort Malden, 18 miles below. He sent forward a reconnoitring party, who returned with information that Tecumseh, with his Indians, had

TARRYTOWN—TATNALL

been lying in ambush near Turkey Creek, not far from Amherstburg, and that the forest was full of prowling barbarians. There were rumors also that British armed vessels were about to ascend the Detroit River. Hall ordered his cannon to be placed near the shore and his camp fortified on the land side. He sent McArthur in pursuit of the Indians in the woods, and Colonel Cass pushed on towards the Ta-ron-tee, as the Indians called it, with 280 men. It is a broad and deep stream flowing through marshes into the Detroit River about 4 miles above Fort Malden, at Amherstburg, and was then approached by a narrow causeway and

iams, and Van Wart; and contains the home and burial-place of Washington Irving; the Philipse manor-house, erected in 1682; a Dutch church, erected prior to 1699; and a monument to the Revolutionary soldiers of the vicinity, dedicated in 1894. Pop. (1910), 5,600.

Tatham, WILLIAM, author; born in Hutton, England, in 1752; settled in Virginia in 1769; served in the Revolutionary War as a colonel of Virginia cavalry. After the war he studied law and was admitted to the bar in 1784; settled in North Carolina in 1786; was in England in 1796-1805; then returned to the United States. He was the author of *Memorial*

VIEW AT RIVIÈRE AUX CANARDS.

spanned by a bridge. At the southern end of the bridge was a detachment of British regulars, Canadian militia, and Indians under Tecumseh. Cass marched up the stream to a ford, crossed it, at sunset dashed upon the enemy, and, after a conflict of a few minutes, dispersed them and drove them into the forest. He asked permission to hold the bridge as an important point in the march upon Fort Malden, but his detachment was too weak to face the peril of such nearness to the fort, and the request was denied. Besides, Hull was not then aware of the real strength of the garrison at Fort Malden, and was not prepared to attack it. The affair at the Ta-ron-tee was the first skirmish and victory in the War of 1812-15.

Tarrytown, a village in Westchester county, N. Y., where the Hudson River expands and is locally known as Tappan Sea. It was the scene of the capture of Major John André by Paulding, Will-

iam, and Van Wart; and contains the home and burial-place of Washington Irving; the Philipse manor-house, erected in 1682; a Dutch church, erected prior to 1699; and a monument to the Revolutionary soldiers of the vicinity, dedicated in 1894. Pop. (1910), 5,600.

Tatnall, JOSIAH, naval officer; born near Savannah, Ga., Nov. 9, 1796; entered the United States navy in 1812; rose to captain in 1850; first served in the frigate *Constellation*, and assisted in the repulse of the British at Craney Island in 1813. He afterwards served under Perry and Porter, and was engaged on the Mexican coast during the war against Mexico. He entered the Confederate service; improvised a flotilla known as the Mosquito Fleet, and attempted to defend Port Royal Sound against Dupont. He commanded at Norfolk when the *Merrimac* was destroyed, and the Mosquito Fleet at Savannah. He died in Savannah, Ga., June 14, 1871.

Taussig, FRANK WILLIAM, educator; born in St. Louis, Dec. 28, 1859; graduated at Harvard College in 1879; later was made professor of political economy at Harvard College. He is the author of *Tariff History of the United States*; *Silver Situation in the United States*; *Wages and Capital*, etc.

Taxation, PROTEST AGAINST. See **ADAMS, SAMUEL.**

"**Taxation no Tyranny**," the title of a pamphlet written by Dr. Samuel Johnson in favor of the taxation schemes of the British government. It appeared early in 1775, and is one of the most heartless, intensely bitter, and savagely insolent of all the essays of the day. It was only the echo of the angry threats and grotesque arguments of the stubborn King, the venal minister, and the mad passions of the aristocracy. Johnson was employed to divert the people's attention from the injustice they were inflicting upon their fellow-subjects in America by oppressing Boston and robbing Massachusetts of its charter, and endeavoring to make its free people absolute slaves to a tyrant's will. The one great blot upon the names of Johnson and Gibbon, the historian, is the barter of their consciences for money; for both had expressed sympathy for the Americans up to that time. Gibbon had even written against the ministerial measures. He became suddenly silent at the time when Johnson's pen was inditing his ribald paragraphs. To them a writer of a stinging epigram alluded in the line, "What made Johnson write made Gibbon dumb."

With unpardonable malignity he uttered ponderous sarcasms and conscious sophistries as arguments. Pointing at Franklin (then in England) with a sneer, he spoke of him as "a master of mischief, teaching Congress to put in motion the engine of political electricity, and to give the great stroke the name of Boston."

To the declaration of the people of Boston that to preserve their liberties

they were willing to leave their rich town and wander into the country as exiles, he heartlessly said: "Alas! the heroes of Boston will only leave good houses to wiser men." To the claim of the Americans to the right of resistance to oppression, he exclaimed: "Audacious defiance! The indignation of the English is like that of the Scythians, who, returning from war, found themselves excluded from their own houses by their slaves." To the words of "A Pennsylvania Farmer" insisting that the Americans complained only of innovations, he retorted: "We do not put a calf into the plough; we wait till he is an ox." The ministry bade him erase these lines because they were unwilling to concede that the calf had been spared, and not for its coarse ribaldry. Johnson shamelessly avowed his bargain by comparing himself, when he obeyed the commands of the ministers, to a mechanic for whom "his employer is to decide." To the assertion that the Americans were increasing in numbers, wealth, and love of freedom, he retorted: "This talk that they multiply with the fecundity of their own rattlesnakes disposes men accustomed to think themselves masters to hasten the experiment of binding obstinacy before it becomes yet more obdurate." He sneered at the teachings of the rule of progression which showed that America must in the end exceed Europe in population, and said in derision, with no suspicion that he was uttering a sure prophecy: "Then, in a century and a quarter, let the princes of the earth tremble in their palaces!" That was a sad spectacle of an old man prostituting the powers of a great intellect, and weakening the prop of his morality, by aiming such a malignant but utterly feeble shaft at his kindred in nationality struggling for freedom.

Boswell, in his *Life of Johnson*, says: "He had long before indulged most unfavorable sentiments of our fellow-subjects in America. For as early as 1769 I was told by Dr. John Campbell that Johnson had said of them: 'Sir, they are a race of convicts and ought to be thankful for anything we allow them short of hanging.' On this performance I avoided to talk with him, for I had now formed a clear opinion that the Americans were well warranted to resist a claim," etc.

TAXATION

Grant of Power.—Under the Articles of Confederation the government had no power either to lay or to collect taxes; it was supported by the States, which contributed to it in proportion to the value of their real estate. If a State neglected or refused to pay its share, the national government had no way of compelling it to do so. This was a very humiliating state of affairs, and contributed not a little to the failure of the Confederation.

Warned by this, the makers of the Constitution gave to Congress the right to impose and collect "taxes, duties, imposts, and excises," but limited this power in two ways: providing (1) that "direct taxes" must be apportioned among the States in proportion to their populations (not in proportion to their wealth); (2) that all "duties, imposts, and excises" must be uniform throughout the United States; and (3) that no tax could be imposed on *exports*. A fourth restriction was connected with slavery, and has now become obsolete. These restrictions cannot be understood without some definitions.

Definitions.—"Taxes," as the word is used in the Constitution, means "direct" taxes, and direct taxes, as decided by the Supreme Court, are of two kinds only: taxes on real estate (including incomes therefrom) and "poll" taxes. Real-estate taxes are readily understood; poll taxes are taxes per "poll" or head—so much for each person. Duties, imposts, and excises differ slightly in meaning, but they all stand on the same footing in the eyes of the Constitution. Commonly "duties" and "imposts" are used in speaking of custom-house taxes, and "excises" are used in regard to internal revenue taxes, but the distinction is of no importance.

Nature.—Duties, imposts, and excises must be uniform throughout the United States. They are levied on goods of one sort or another, either on articles imported from abroad (taxes on exports are forbidden) or on certain articles produced (such as liquors, tobacco, oleomargarine, etc.) or owned (such as carriages, express receipts, checks, etc.). The rate levied must be uniform from Maine to California; the total amount

obtained from them depends on the extent of their importation, use, etc. Thus taxes of this sort are *uniform* and are *indefinite* in the amount they yield.

National direct taxes, on the other hand, under our system, though *definite* in amount, are not uniform. When Congress levies a direct tax, it states the amount it requires (it called for a direct tax of twenty million dollars in 1861) and calls upon each State to pay a share of it proportionate to its population. Under this plan a new and poor State would have to pay as much as an old and rich State *with the same population*. Oregon, South Dakota, and Rhode Island, for instance, would have to pay about the same, irrespective of their wealth. This seems unfair. Another objection to direct taxation prevails in the United States. Owing to our double form of government, we must raise money by taxation both for national and for State purposes. Direct taxes, however, must usually be raised on the very things that must pay taxes to the States, thus robbing the States of part of the resources that would naturally help to support them. This is not a valid objection; it is only one arising from our habits, but it is a very practical one.

For these reasons national direct taxes have always been unpopular in the United States, though in other countries (England, for instance) they pay the larger part of the expenses of the government. We have resorted to them only five times, each time for only one year.

Direct Taxes.—"Direct" taxes, as the term has been construed by the Supreme Court, are different from direct taxes as popularly understood and as defined in political economy. To the political economist (and to the average man) a direct tax is a tax collected directly from the property of the man who pays it, and an indirect tax is one that can be passed along to somebody else.

Taxes on carriages, bank checks, etc., are direct taxes in the eyes of the *political economist*, because they are paid by the owners of the carriages, the drawers of the checks, etc., and cannot be shifted; while customs taxes are indirect, because their amount is added by the importer to the price of the goods and is finally

TAXATION

paid by the consumer. In the sense of the Constitution, however, as interpreted by the Supreme Court, a tax on carriages or telegraph messages is not a direct tax.

Income taxes are direct in so far as they are derived from real estate, and indirect in so far as they are derived from other sources. Practically it is impossible to divide incomes up according to their sources, and if they could be so divided it would be considered grossly unfair to tax those derived from one source and exempt those derived from another source. For these reasons Congress has found itself unable to impose a satisfactory income tax except by apportioning it among the States in proportion to their populations. An amendment to the Constitution, giving the national government power to impose an income tax, was proposed by Congress to the States in 1909 and is still under consideration. It will become part of the Constitution when three-fourths of the States ratify it. After that, Congress, in its discretion, may or may not impose such a tax.

Customs Duties.—Customs duties have almost always been the chief source of United States government revenues. Before the Civil War they were almost the only important source, but since that time they have been nearly equalled by internal-revenue receipts.

The power to impose them is naturally a function of a national government. Under the Confederation, however, Congress had no such power, the States reserving it to themselves. This led to endless complications, and was wholly given up when the Constitution was drafted. Nowadays no State may impose any customs duties (except by the consent of Congress) further than may be necessary to pay costs of inspection, harborage, etc., on goods imported. If any charge made for inspection brings in more than it cost, the excess must be turned over to the United States. Nor may a State impose such taxes indirectly. Maryland once required importers of foreign goods to take out a license costing fifty dollars, but the Supreme Court declared the law unconstitutional on the ground that it was virtually an import tax.

Once inside the country, it is difficult and often impossible to identify foreign

goods; and so, in order to make sure that these shall pay the duties, foreign goods are required to be brought in at certain specified places called "ports of entry," where they are examined and the duties assessed according to law. Evasion of the duty is known as smuggling, and Congress is given power to punish such by imprisonment, fine, and confiscation of the goods.

Export Taxes.—Export taxes are expressly forbidden by the Constitution.

Internal-revenue Taxes.—Internal-revenue taxes, as understood in the United States, are all taxes not direct except customs duties. In early days internal-revenue taxes were imposed to a limited extent only; the first really important law on the subject was adopted in 1862, in order to raise money for carrying on the Civil War. It brought in about \$300,000,000 a year, and it and its successors have furnished nearly half of the total income of the United States ever since.

Ordinarily internal-revenue taxes are levied on liquors and tobacco, but they may be imposed on practically anything except real estate. In time of war they have been levied on carriages, express receipts, telegrams, watches, and hundreds of other articles. Even to-day they are imposed on profits of corporations engaged in interstate commerce, oleomargarine, notes of State banks, adulterated butter, filled cheese, opium, mixed flour, and playing-cards. Where possible they are paid by purchasing special stamps, which are affixed to the goods and thus serve as evidence that the duties have been paid. Selling or having in one's possession any of these articles not bearing the proper stamps is an offence which Congress is empowered by the Constitution to punish by imprisonment, fine, and confiscation of the goods.

Objects of Taxation.—Taxes are ordinarily imposed in order to raise money. The Constitution, however, does not restrict them to this; it says Congress may impose them to pay the debts and provide for the common defence and the general welfare. It does not say that Congress may impose them to raise money to provide for these things, but that Congress may impose them to do these things.

TAXATION

This distinction is a fine one, but it is important, for on it depends the entire right of Congress to impose a "protective" tariff.

On each article imported or manufactured or used in the United States there is necessarily some particular rate which, if imposed, would yield the greatest possible receipts. Increase the rate above this figure and imports (or production or use) would fall off, so that even at the higher rate the total income would be less; reduce it below this figure and, though imports (production, use) will increase, they will not balance the loss from the lower rate.

A *revenue* tariff aims to ascertain this most profitable rate and to impose it. A *protective* tariff, on the other hand, tries not to impose the most profitable rate, but to find the rate which, while profitable, will at the same time restrict the importation of articles that come into competition with domestic products. Theoretically it is supposed to be high enough to equalize the cost of production at home and abroad, and at the same time yield sufficient revenue for the expenses of the government.

To equalize the cost of production and thereby prevent cheap foreign goods from underselling and ruining domestic industries is certainly to provide for the "general welfare" of the country, and on this ground the courts have declared that the imposition of an admittedly protective tariff is lawful. It is contended by many, however, that such duties, even if legal, really go beyond the intention of the framers of the Constitution. It is a fact, nevertheless, that as early as 1789, only eight years after the Constitution was enacted, Congress passed a tariff act which it expressly stated was for the "encouragement and protection of manufacturers," thus showing that the "fathers" of the country considered such action within their powers. A protective tariff is therefore legally justifiable; whether it is advisable is another question.

Some internal-revenue laws are also based on this "general welfare" provision. The taxes on notes of State banks, oleomargarine, opium, etc., are not imposed to get revenue, but to restrict or

prevent the production of things that are considered objectionable. In early years State-bank notes so often proved worthless that in 1866 Congress decided that the public welfare demanded that they should be taxed out of existence altogether; later, oleomargarine, mixed flour, etc., were taxed so that they might be readily identified by the "stamps" affixed to them and thus might not be fraudulently sold to the public as butter, wheat flour, and so on. Similarly opium was taxed in order to control its importation and use.

Taxation in the United States.—The following article, by Professor Albert Bushnell Hart, is taken from his volume *National Ideals Historically Traced*.

Closely allied with private wealth and with the control of business is public finance, which is based upon the right of the State to subtract from private property, first, whatever is necessary for national preservation, and then whatever may be held desirable for the general purposes of the community. Every tax is to some degree a restriction on some form of commercial activity, and may amount to absolute prohibition; on the other hand, the outgoes of government affect the upbuilding of industries. Public finance, defence, private enterprise, and the general welfare are all intertwined.

Early American finances were simple. As in the case of many other English colonies, the first-comers put in more money than they took out: the London Company, in its seventeen years of activity, sank two hundred thousand pounds. The effort of colonial proprietors to make a steady profit through quit-rents on the lands which they sold were always unpopular and led to discontent and riots. Colonial taxes were almost all on land, and sometimes could be paid in produce, as witness the early entry in Massachusetts: "item, a goat of the Watertowne rate; and he dyed." The colonies were lightly burdened, and the towns and counties had the right to determine on their own necessities and to lay taxes accordingly. The only imperial taxes were small import duties levied after 1676 by resident British collectors, intended chiefly to prevent smug-

TAXATION

gling. Colonial expenses were chiefly for the salaries of a few executive officers and judges, for defence and offence, and in the eighteenth century for an agent in London, together with a few public buildings; local expenditures were chiefly for the poor and for roads and bridges, with some small outgoes for education.

None of the colonies imitated the European system of funded public debts then becoming fashionable, for there was little capital at home and no credit abroad. The closest approach to a standing debt was the issue of paper money, first to clear off the cost of military expeditions by anticipating taxes, then, through the so-called paper-money banks, to lend money on real-estate security. This paper money naturally depreciated, till in some cases it was worth in specie only a twenty-fifth of its face, and the British government, by a series of statutes from 1741 to 1764, prohibited the issues. There being no private bank-notes at that time, the colonies were brought back to a specie basis, supplemented by barter, so that at the same store you might trade in "pay," "money," "pay as money," or "trust." The one great political ideal worked out in the colonies was "no taxation without representation," which they applied in favor of the appropriation bills of their own legislatures and against any general taxation by Parliament. The colonists' financial ideals were simple and easy.

The Revolution was out of accord with these crude and small financial methods. The war could not be fought at all without expenditures which would have been heavy even for a people previously accustomed to pay high taxes, with experienced financiers and endowed with national financial powers. Revolutionary finance was simply the problem of getting all the money that the States would raise by taxation, adding to it voluntary loans of every kind, and then issuing a flood of paper money on the authority both of the States and of Congress, leaving a floating debt still unpaid. Confusion, waste, poor bookkeeping, injustice to public creditors, confiscation of the private property of the Tories—these were the price that had to be paid for the lesson that governments have no reserve of property, and that there is no

royal nor democratic road to sound national finances.

When the Confederation went into action in 1781, people hoped for an improvement in public finance, under Robert Morris, the first national financier; but though peace speedily followed, Morris found it impossible to pay the public creditors, because the States did not meet the requisitions legally assessed upon them. His chief contribution to national financial ideals was the Bank of North America, chartered by Congress at his desire. Accumulations of unpaid interest raised the domestic debt in seven years from about thirty-six million to about fifty million dollars. The States were also in financial difficulties: they repudiated the whole or part of their outstanding paper notes, and in a few cases their bonded debt, and the pressure of taxes caused discontent and risings. A prosperous and thriving country, in which commerce and capital were increasing, was on the verge of national bankruptcy.

The experience of the twelve years from 1775 to 1787 sank deep into the national consciousness and produced ideals which are reflected in the federal Constitution and the practice of the subsequent State governments. The first of these is the conviction, at least of business men, that governments cannot make wealth by issuing paper money; hence the clause in the federal Constitution forbidding the States to issue bills of credit. The attempt to float paper money by making it legal tender caused great difficulty and hardship; hence the States were forbidden to "make anything but gold and silver coin a tender in payment of debts." The quarrels between the States over interstate and foreign trade led to provisions forbidding them to lay import or export duties. The financial distress of the Confederation led to giving Congress broad power to "lay and collect taxes, duties, imposts, and excises." It was firmly fixed in the American consciousness that there can be no real government which has not an independent right to raise money by taxes or loans, to expend it with large discretion for governmental purposes, and to provide a properly adjusted financial administration.

TAXATION

In 1789 begins the first real system of American public finance in the various types of government. First of all, the outstanding federal debts and claims were adjusted and new securities issued; in the second place, recognizing that the twenty millions of outstanding State debts were incurred in the Revolutionary struggle, that amount was "assumed" by the federal government, and the States thus started clear. This left only one public debt, that of the federal government, and everybody understood that it was soon to be extinguished. During the next quarter-century the taxes throughout the country were low, and, by a tacit understanding, except during the exigencies of war the federal government left to the States the field of direct taxation and took for its province chiefly duties on imports. The growth of commerce caused the low imposts commonly to meet the whole needs of the government; hence the notion sprang up that other forms of national taxation were unnecessary and oppressive. The effect has been ill for the government, because the customs are an uncertain resource, which cannot be calculated beforehand. Another incident of early finance was the great unpopularity of the excise laid in 1791.

Nevertheless, the times were favorable; even the War of 1812 was only a temporary setback. Such a result would not have been possible but for modest ideals of national expenditure. Leaving out the war, the navy, and the interest on the public debt, there are only four years previous to 1829 when the expenses were over four million dollars. Public officials were few, salaries low, the field of federal legislation still narrow.

The prohibition of State paper money and the exclusive federal power over coinage caused the growth of new principles as to a circulating medium. Hamilton, foreseeing that bank-notes would be the usual currency of the future, secured from Congress the National Bank of 1791, and the States also chartered numerous banks. This made three kinds of currency: State-bank notes, many of them circulating at a discount; United States bank-notes, always at par; and specie, the greater part of which was foreign coin. The United States Bank expired in

1811; it was much missed during the War of 1812, and therefore was rechartered in 1816.

The feeling of rivalry of interests between the farmer and the townsman made all banks unpopular; and this aided Jackson when, in 1831, he began an assault upon the United States Bank and prevented its recharter. The "deposits," or treasury balances, were "removed" to State banks, which enlarged their circulation and whose notes tended to drive specie out. Jackson, therefore, transferred his campaign to bank-notes, first of all in government transactions, and then on general principles. In 1840 Van Buren obtained the sub-treasury act by which government balances were to be retained in the vaults of the government.

In this way the federal government with difficulty separated itself, so far as it could, from the business of banking. On the other hand, several of the Western and Southern States, especially Kentucky, Georgia, Alabama, and Illinois, set up State-owned banks, which sometimes claimed a monopoly of the business. The panic of 1819 was a proof that the financial system of the country was weak, and the terrible crash of 1837 brought down scores of banks and led to a new era of legislation. Several of the States abandoned their State-owned concerns, which could not be prudently managed, and the banking business was better safeguarded, although the currency was a strange mixture of counterfeit, poor, good, and unredeemable bank-notes, combined, after 1848, with some gold coin.

Though the federal debt was extinguished in 1835, its place was taken by State and local indebtedness. The States took upon themselves the duty of building canals, and the great capital necessary could be had only by borrowing abroad. This was an easy process, and in 1836 they added to their funds the so-called "distribution" of twenty-seven million dollars as a bonus from the federal government. The crash of 1837 overtook them and their enterprises; half a dozen of them suspended payment, and some of them never made their bonds good. During the same decade the cities discovered that they, too, had credit, and raised money for water-works and other

TAXATION

improvements on their own securities. Cities, counties, towns, and villages gave large sums towards the construction of railroads, or more frequently pledged their credit. All these attempts to get rich by running into debt excited alarm: in 1836 the State constitutions began to fix a limit to the amount of taxes that could be raised in any one year, and a few years later to forbid loans of public credit by any form of government. At the same time and for the same reasons the people denied the privilege of *laissez-faire* to themselves by imbedding in their constitutions limitations on private corporations and on the legislatures. Democracy had lost confidence in its own self-control. On the other hand, the lesson that the cost of public improvements might be put over upon the next generation was well learned.

The ease of borrowing at home and abroad was unfortunately too much in men's minds when the Civil War broke out. The Confederacy, unable to get its cotton to market, was practically bankrupt from the first, in that, when its only available gold supply, the scanty specie reserves of the banks, was gone, there was nothing to draw on but the quick capital of the country. Hence a return to devices first tried in the Revolution, such as seizure of supplies, certificates for debt, and irredeemable paper money which was simply a forced loan distributed among the people. The federal government was on a different footing: it had behind it a rich and productive country, untouched by the hand of war and pouring out its surplus products to foreign countries; it had credit abroad for the purchase of supplies and for the sale of bonds; it had a wealthy people who, experience proved, were perfectly willing to pay high taxes. 'But nobody expected the war to last more than a few months, and in a place where a genius like Hamilton or Gallatin might have evolved a system of his own the financial policy consisted of raising taxes too slowly to be helpful, selling whatever bonds people would buy, raising money by short-term notes at high interest, and issuing over four hundred million dollars of paper money.

Some new financial ideas came out of

the war: one was the revival of the excise, which came to be a permanent tax. An income tax, for the first time laid by the federal government, proved acceptable and highly productive. For the first time since 1789 paper money was issued with a legal-tender power, and after the war was over was allowed to remain because people were accustomed to it and because it saved about eight million dollars a year in interest. The most serious novelty was a third federal bank system, this time in the form of a multitude of "national banks" issuing a currency secured by government bonds. After 1864 State-bank notes were taxed out of existence. The system, though not very elastic, had the advantages of wide distribution of the bonds and the supervision of the paper currency by the national treasury. Upon the public imagination the greatest effect was the use of an absolutely secure paper currency, in which a national bank-note was as good as a greenback and both were as good as Uncle Sam.

After the Civil War all these paper notes remained at a discount, varying from about sixty per cent. in 1864 to a fraction of one per cent. just before the resumption of specie payments in 1879. Resumption was not only a mark of the completely restored credit of the government, but broke up speculation in gold, which was practically a gambling on the public credit, and again placed the United States on the same currency basis as other Western nations. The debts of the Confederate government and the Confederate States incurred in support of the Rebellion were invalidated, and several of the reconstructed States repudiated loans incurred by the carpet-bag governments, considerable parts of which were fraudulent. Notwithstanding which, the State debts, which in 1860 were \$265,000,000, in 1880 had risen to \$275,000,000, and the municipal and local debt then stood at \$850,000,000. Taking the three forms of public debt together, the total in 1880 was over \$3,000,000,000, or \$60 per capita.

As a result of the necessary close relation between government and the money-market during the war, people came to expect that in case of any financial

TAXATION

trouble the federal government would come forward and rescue the country. The commercial crisis of 1866 was popularly laid to a contraction of the greenbacks by the treasury. In 1871 a desperate effort was made to get the government to keep its hands off while James Fisk and other corrupt speculators "cornered" the visible gold. The secretary of the treasury became the principal banker of the country, and was expected, in his purchases and sales of bonds and his handling of the treasury balances, to avoid disturbing the rest of the financial system.

The treasury operations were heavy because it was a national ideal to extinguish the public debt, which in 1866 was \$2,800,000,000, in 1880 stood about \$2,300,000,000, but in 1890 had sunk to \$1,500,000,000. The years 1878 and 1879 are turning-points in the ideals of public finance, because, just as people had accepted the principle that the federal obligations were to be paid in specie and not in irredeemable paper money, a new question arose as to what was specie. The Bland Silver Act of 1878 was intended to prevent silver from being dropped out of national use, and from that time until 1900 there was ceaseless discussion on bimetallism; all questions of taxation, of debt payment, of bond issues, and of treasury management were cabined and confined by this controversy. The ideal that silver had a moral right to the government mintage stamp was never accepted by the whole country, and for that ideal was finally substituted a statute in 1900, providing that all forms of government currency should be redeemable on the same terms. Another ideal which at least always had a majority in Congress behind it was that the soldiers in the Civil War had a special claim on the treasury; and the net result was that, as the veterans decreased in number, the pension payments pretty steadily rose.

One reason for this generosity was a new conception that it was desirable to spend money freely so that the taxes might not be reduced, and particularly the tariff taxes. The normal unsteadiness of the tariff is still more striking when, as was the case continuously after 1861, the tariff is laid not with an eye to reve-

nue, but to its influence on home manufactures. An effort was made to put off the question of lowering it by cutting down the whiskey tax, but the temperance people rallied and the excise remained. In 1894 the Democrats had a majority in both Houses and passed the Wilson tariff bill, which was expected to reduce the revenue, but made up for the gap by reviving the income tax. As that tax was soon disallowed by the Supreme Court, and a commercial crisis checked business, the revenue fell off and there was a series of deficits which had to be covered by bond issues. The effect was to discredit the attempt to return to the ideal of a revenue calculated to meet the needs of the government, and also to check the intention of extinguishing the national debt.

State and municipal finance also suffered from the wealth of the people and the unparalleled incomes of the various governments. They had so much money that it seemed as though they could do anything, and therefore there were calls for more than they could possibly raise. The ideal of the budget is found in the States which with few exceptions have moderate expenses and meet them from regular sources, so that they can plan to make their income just balance the outgo. The cities also try less unweariedly to make both ends meet. In State and local government, income and outgo are regulated by the same body of people, whether a city legislature or a board of estimate and appropriation; but the national government, with the best financial administration, has the poorest financial system: first, because of the uncertainty of what the income is going to be; second, because ever since the Civil War people have been accustomed to see income and outgo in disaccord; and finally because even the outgoes are not concentrated, inasmuch as they depend upon the appropriations, which since 1865 have been reported by several different committees. The only man who in any way corresponds with the chancellor of the exchequer in England is the Speaker of the House of Representatives, who takes some responsibility for the total amount of the appropriation bills.

The public bookkeeping of most Ameri-

TAXATION

can governments is anything but ideal, and States and municipalities lack proper financial records. The federal government is too efficient, for it follows its finances into minute details, so that the treasury is called upon to decide such difficult questions as whether frogs' skins are dutiable as hides or as fish-skins.

Upon public finance Americans have formed several distinct and permanent ideals. The first is that the federal and State governments ought to select different classes of objects of taxation; but this practical division is confused, because some taxes, as on liquor, are concurrent, and because in times of need the federal government taxes legacies and other things which the States have considered their province. Americans have little objection to high taxes if they can see their results, and in 1906 they were paying about \$16 per capita, which is about half as much as the tax in Great Britain (\$30) for all purposes. They believe in exempting from taxation schools and, in most States, colleges and religious institutions, on the ground that they serve a public purpose. They are incompetent in the assessment of taxes of every kind, because unwilling to pay for and keep in office trained assessors able to take advantage of a growth in values. In general, the American looks on taxation as a necessary evil: few people run after the tax-collector to call his attention to omissions; and wealthy corporations, especially railroad and traction companies, hold back for years taxes assessed upon them, and resort to every technicality to avoid sharing in the public burden.

The ideal of the tariff can hardly be brought within the discussion of taxation, because to the American mind it is not a fiscal but a commercial device. Although within the boundaries of the United States lies one of the largest areas in the world free from internal tariffs, millions of people feel sure that the prosperity of their country depends on preventing the freedom of external trade which is so prosperous within. Whatever the financial advantages or disadvantages of the tariff, it has a very unfavorable effect on the *morale* of the nation, because of the lobbying of Con-

gress whenever it is under discussion; because the States (especially Pennsylvania) which feel most advantaged by protection therefore submit to corrupt bosses, who undertake to keep the duties high; and because it leads people to look to the federal government as a distributor of special advantages to those who are shrewd enough to get into the favored circle. The effect of the tariff upon the wealth and productiveness of the nation is probably much exaggerated on both sides; the effect upon public life of the hope that the government will help out special lines of business is demoralizing.

Americans are always willing to pay a good price for a good article; in government they seem equally willing to pay an exorbitant price for a poor article. Foreign cities get more for much less money, in cleanliness, beauty, protection of life and property, and the convenience of living. The cities are not the only great corporations whose servants make money by secret contracts and waste it by inefficiency; but no other corporation has every man, woman, and child as a stockholder, or is so easily brought to account by a public election. The affluence of the country is made an argument against financial efficiency, and there are critics who say that nothing will make our city governments economical except hard times.

The old motto "Pay as you go" is not an American ideal either in private or public business. People are so used to seeing large improvements paid for out of bonds that wealthy cities like Boston borrow money to keep their pavements in order. The result is not only a large debt, but a public uncertainty as to what is actually being raised and expended from year to year.

In his public finance the American is an optimist. With the trifling exception of the fourteen States that, at one time or another, have repudiated debt, and of several cities which have been put into the hands of a receiver, all the various governments keep going, spend money lavishly, yet pay the interest on their debts. The country is rich, and is likely to be richer, and if the city of New York wants water-works that cost \$160,000,000 it enters on the work with perfect con-

TAXATION

fidence; if the State of Pennsylvania wants a capitol at a cost of \$4,000,000, it meekly allows the State government to involve it in additional corrupt contracts and payments to the amount of \$9,000,000; if the nation thinks a Panama Canal desirable, it will have it, cost it \$150,-

000,000 or \$400,000,000. After all, if we keep up the interest on this enormous mass of public debts, why should not our children pay the principal? *Après nous le déluge!* Why should this generation distrust the soaring financial imagination of a great people?

TAX ON CORPORATIONS

On June 16, 1909, President Taft sent the following message to Congress:

"To the Senate and House of Representatives. It is the constitutional duty of the President from time to time to recommend to the consideration of Congress such measures as he shall judge necessary and expedient. In my inaugural address, immediately preceding this present extraordinary session of Congress, I invited attention to the necessity for a revision of the tariff at this session and stated the principles upon which I thought the revision should be effected. I referred to the then rapidly increasing deficit and pointed out the obligation on the part of the framers of the tariff bill to arrange the duty so as to secure an adequate income and suggested that if it was not possible to do so by import duties new kinds of taxation must be adopted, and among them I recommended a graduated inheritance tax as correct in principle and as certain and easy of collection.

"The House of Representatives has adopted the suggestion and has provided in the bill it passed for the collection of such a tax. In the Senate the action of its finance committee and the course of debate indicate that it may not agree to this provision, and it is now proposed to make up the deficit by the imposition of a general income tax in form and substance of almost exactly the same character as that which in the case of Pollock *vs.* Farmers' Loan and Trust Company (157 U. S., 429) was held by the Supreme Court to be a direct tax, and therefore not within the power of the federal government to impose unless apportioned among the several States according to population. This new proposal, which I did not discuss in my inaugural address or in my message at the opening of the

present session, makes it appropriate for me to submit to the Congress certain additional recommendations.

"The decision of the Supreme Court in the income-tax cases deprived the national government of a power which, by reason of previous decisions of the court, it was generally supposed the government had. It is undoubtedly a power the national government ought to have. It might be indispensable to the nation's life in great crises. Although I have not considered a constitutional amendment as necessary to the exercise of certain phases of this power, a mature consideration has satisfied me that an amendment is the only proper course for its establishment to its full extent. I therefore recommend to the Congress that both Houses, by a two-thirds vote, shall propose an amendment to the Constitution conferring the power upon the national government to levy an income tax without apportionment among the States in proportion to population.

"This course is much to be preferred to the one proposed of re-enacting a law once judicially declared to be unconstitutional. For the Congress to assume that the court will reverse itself and to enact legislation on such an assumption will not strengthen popular confidence in the stability of judicial construction of the Constitution. It is much wiser policy to accept the decision and remedy the defect by amendment in due and regular course.

"Again, it is clear by the enactment of the proposed law the Congress will not be bringing money into the treasury to meet the present deficiency, but by putting on the statute-book a law already there and never repealed will simply be suggesting to the executive officers of the government their possible duty to invoke litigation. If the court should maintain

TAX ON CORPORATIONS

its former views, no tax would be collected at all. If it should ultimately reverse itself still no taxes would have been collected until after protracted delay.

"It is said the difficulty and delay in securing the approval of three-fourths of the States will destroy all chance of adopting the amendment. Of course, no one can speak with certainty upon this point, but I have become convinced that a great majority of the people of this country are in favor of vesting the national government with power to levy an income tax, and that they will secure the adoption of the amendment in the States if proposed to them.

"Second, the decision in the Pollock case left power in the national government to levy an excise tax which accomplishes the same purpose as a corporation income tax and is free from certain objections urged to the proposed income-tax measure.

"I therefore recommend an amendment to the tariff bill, imposing upon all corporations and joint stock companies for profit, except national banks (otherwise taxed), savings-banks, and building and loan associations, an excise tax measured by two per cent. on the net income of such corporations. This is an excise tax upon the privilege of doing business as an artificial entity and of freedom from a general partnership liability enjoyed by those who own the stock.

"I am informed that a two-per-cent. tax of this character would bring into the treasury of the United States not less than \$25,000,000.

"The decision of the Supreme Court in the case of *Spreckels Sugar Refining Company against McClain* (192 U. S., 397) seems clearly to establish the principle that such a tax as this is an excise tax upon privilege and not a direct tax on property, and is within the federal power without apportionment according to population. The tax on net income is preferable to one proportionate to a percentage of the gross receipts, because it is a tax upon success, and not failure. It imposes a burden at the source of the income at a time when the corporation is well able to pay and when collection is easy.

"Another merit of this tax is the federal supervision which must be exercised

in order to make the law effective over the annual accounts and business transactions of all corporations. While the faculty of assuming a corporate form has been of the utmost utility in the business world, it is also true that substantially all of the abuses and all of the evils which have aroused the public to the necessity of reform were made possible by the use of this very faculty. If now by a perfectly legitimate and effective system of taxation we are incidentally able to possess the government and the stockholders and the public of the knowledge of the real business transactions and the gains and profits of every corporation in the country, we have made a long step toward that supervisory control of corporations which may prevent a further abuse of power.

"I recommend, then, first, the adoption of a joint resolution by two-thirds of both Houses, proposing to the State an amendment to the Constitution granting to the federal government the right to levy and collect an income tax without apportionment among the States according to population; and, second, the enactment, as part of the pending revenue measure, either as a substitute for, or in addition to, the inheritance tax, of an excise tax upon all corporations, measured by two per cent. of their net income."

The President's corporation-tax proposal was formulated into an amendment to the tariff act of August, 1909, and was declared constitutional by the United States Supreme Court March 13, 1911.

Text of Corporation-Tax Law.—The following is the text of the corporation-tax law, comprising Section 38 of the Tariff Act:

That every corporation, joint stock company, or association, organized for profit and having a capital stock represented by shares, and every insurance company, now or hereafter organized under the laws of the United States or of any State or Territory of the United States or under the acts of Congress applicable to Alaska or the District of Columbia, or now or hereafter organized under the laws of any foreign country and engaged in business in any State or Territory of the United States or in Alaska or in the District of Columbia,

TAX ON CORPORATIONS

shall be subject to pay annually a special excise tax with respect to the carrying on or doing business by such corporation, joint stock company, or association, or insurance company, equivalent to one per cent. upon the entire net income over and above \$5000, received by it from all sources during such year, exclusive of amounts received by it as dividends upon stock of other corporations, joint stock companies, or associations, or insurance companies, subject to the tax hereby imposed; or if organized under the laws of any foreign country, upon the net income over and above \$5000 received by it from business transacted and capital invested within the United States and its Territories, Alaska, and the District of Columbia during such year, exclusive of amounts so received by it as dividends upon the stock of other corporations, joint stock companies, or associations, or insurance companies subject to the tax hereby imposed; provided, however, that nothing in this section contained shall apply to labor, agricultural, or horticultural organizations, or to fraternal beneficiary societies, orders, or associations operating under the lodge system and providing for the payment of life, sick, accident, and other benefits to the members of such societies, orders, or associations, and dependents of such members, nor to domestic building and loan associations, organized and operated exclusively for the mutual benefit of their members, nor to any corporation or association organized and operated exclusively for religious, charitable, or educational purposes, no part of the net income of which inures to the benefit of any private stockholder or individual.

2. Such net income shall be ascertained by deducting from the gross amount of the income of such corporation, joint stock company, or association, or insurance company, received within the year from all sources, (1) all the ordinary and necessary expenses actually paid within the year out of income in the maintenance and operation of its business and properties, including all charges such as rentals or franchise payments, required to be made as to the continued use or possession of property; (2) all losses actually sustained within the year and

not compensated by insurance or otherwise, including a reasonable allowance for depreciation of property, if any, and in the case of insurance companies the sums other than dividends, paid within the year on policy and annuity contracts and the net addition, if any, required by law to be made within the year to reserve funds; (3) interest actually paid within the year on its bonded or other indebtedness to an amount of such bonded and other indebtedness not exceeding the paid-up capital stock of such corporation, joint stock company, or association, or insurance company, outstanding at the close of the year, and in the case of a bank, banking association, or trust company, all interest actually paid by it within the year on deposits; (4) all sums paid by it within the year for taxes imposed under the authority of the United States or of any State or Territory thereof, or imposed by the government of any foreign country as a condition to carrying on business therein; (5) all amounts received by it within the year as dividends upon stock of other corporations, joint stock companies, or associations, or insurance companies, subject to the tax hereby imposed; provided, that in the case of a corporation, joint stock company, or association, or insurance company, organized under the laws of a foreign country, such net income shall be ascertained by deducting from the gross amount of its income received within the year from business transacted and capital invested within the United States and any of its territories, Alaska and the District of Columbia (1) all the ordinary and necessary expenses actually paid within the year out of earnings in the maintenance and operation of its business and property within the United States and its Territories, Alaska and the District of Columbia, including all charges such as rentals or franchise payments required to be made as a condition to the continued use or possession of property; (2) all losses actually sustained within the year in business conducted by it within the United States or its Territories, Alaska, or the District of Columbia not compensated by insurance or otherwise, including a reasonable allowance for depreciation of property, if any, and in the

TAX ON CORPORATIONS

case of insurance companies the sums other than dividends paid within the year on policy and annuity contracts and the net addition, if any, required by law to be made within the year to reserve funds; (3) interest actually paid within the year on its bonded or other indebtedness to an amount of such bonded and other indebtedness, not exceeding the proportion of its paid-up capital stock outstanding at the close of the year which the gross amount of its income for the year from business transacted and capital invested within the United States and any of its Territories, Alaska, and the District of Columbia bears to the gross amount of its income derived from all sources within and without the United States; (4) the sums paid by it within the year for taxes imposed under the authority of the United States or of any State or Territory thereof; (5) all amounts received by it within the year as dividends upon stock of other corporations, joint stock companies, or associations, and insurance companies, subject to the tax hereby imposed. In the case of assessment insurance companies the actual deposit of sums with State or Territorial officers, pursuant to law, as additions to guaranty or reserve funds shall be treated as being payments required by law to reserve funds.

3. There shall be deducted from the amount of the net income of each of such corporations, joint stock companies, or associations, or insurance companies, ascertained as provided in the foregoing paragraphs of this section, the sum of \$5000, and said tax shall be computed upon the remainder of said net income of such corporation, joint stock company, or association, or insurance company, for the year ending December 31, 1909, and for each calendar year thereafter; and on or before the first day of March, 1910, and the first day of March in each year hereafter, a true and accurate return under oath or affirmation of its president, vice-president, or other principal officer, and its treasurer or assistant treasurer, shall be made by each of the corporations, joint stock companies, or associations, and insurance companies, subject to the tax imposed by this section, to the collector of internal revenue for the district

in which such corporation, joint stock company, or association, or insurance company, has its principal place of business, or, in the case of a corporation, joint stock company, or association, or insurance company, organized under the laws of a foreign country, in the place where its principal business is carried on within the United States, in such form as the commissioner of internal revenue, with the approval of the secretary of the treasury, shall prescribe, setting forth (1) the total paid-up capital stock of such corporation, joint stock company, or association, or insurance company, outstanding at the close of the year; (2) the total amount of bonded or other indebtedness of such corporation, joint stock company, or association, or insurance company, at the close of the year; (3) the gross amount of the income of such corporation, joint stock company, or association, or insurance company, received during such year from all sources, and if organized under the laws of a foreign country the gross amount of its income received within the year from business transacted and capital invested within the United States and any of its Territories, Alaska, and the District of Columbia; also the amount received by such corporation, joint stock company, or association, or insurance company, within the year by way of dividends upon stock of other corporations, joint stock companies, or associations, or insurance companies, subject to the tax imposed by this section; (4) the total amount of all the ordinary and necessary expenses actually paid out of the earnings in the maintenance and operation of the business and properties of such corporation, joint stock company, or association, or insurance company, within the year, stating separately all charges such as rentals or franchise payments required to be made as a condition to the continued use or possession of property, and if organized under the laws of a foreign country the amount so paid in the maintenance and operation of its business within the United States and its Territories, Alaska, and the District of Columbia; (5) the total amount of all losses actually sustained during the year and not compensated by insurance or

TAX ON CORPORATIONS

therwise, stating separately any amounts allowed for depreciation of property, and in the case of insurance companies the sums other than dividends, paid within the year on policy and annuity contracts and the net addition, if any, required by law to be made within the year to reserve funds; and in the case of a corporation, joint stock company, or association, or insurance company, organized under the laws of a foreign country, all losses actually sustained by it during the year in business conducted by it within the United States or its Territories, Alaska, and the District of Columbia, not compensated by insurance or otherwise, stating separately any amounts allowed for depreciation of property, and in the case of insurance companies the sums, other than dividends, paid within the year on policy and annuity contracts and the net addition, if any, required by law to be made within the year to reserve fund; (6) the amount of interest actually paid within the year on its bonded or other indebtedness to an amount exceeding the paid-up capital stock of such corporation, joint stock company, or association, or insurance company, outstanding at the close of the year, and in the case of a bank, banking association, or trust company, stating separately all interest paid by it within the year on deposits; or in case of a corporation, joint stock company, or association, or insurance company, organized under the laws of a foreign country, interest so paid on its bonded or other indebtedness to an amount of such bonded and other indebtedness not exceeding the proportion of its paid-up capital stock outstanding at the close of the year, which the gross amount of its income for the year from business transacted and capital invested within the United States and any of its Territories, Alaska, and the District of Columbia bears to the gross amount of its income derived from all sources within and without the United States; (7) the amount paid by it within the year for taxes imposed under the authority of the United States or any State or Territory thereof, and separately the amount so paid by it for taxes imposed by the government of any

foreign country as a condition to carrying on business therein; (8) the net income of such corporation, joint stock company, or association, or insurance company, after making the deductions in this section authorized. All such returns shall as received be transmitted forthwith by the collector to the commissioner of internal revenue.

4. Whenever evidence shall be produced before the commissioner of internal revenue which in the opinion of the commissioner justifies the belief that the return made by any corporation, joint stock company, or association, or insurance company, is incorrect, or whenever any collector shall report to the commissioner of internal revenue that any corporation, joint stock company, or association, or insurance company, has failed to make a return as required by law, the commissioner of internal revenue may require from the corporation, joint stock company, or association, or insurance company making such return such further information with reference to its capital, income, losses, and expenditures as he may deem expedient; and the commissioner of internal revenue, for the purpose of ascertaining the correctness of such return or for the purpose of making a return where none has been made, is hereby authorized, by any regularly appointed revenue agent specially designated by him for that purpose, to examine any books and papers bearing upon the matters required to be included in the return of such corporation, joint stock company, or association, or insurance company, and to require the attendance of any officer or employé of such corporation, joint stock company, or association, or insurance company, and to take his testimony with reference to the matter required by law to be included in such return, with power to administer oaths to such person or persons; and the commissioner of internal revenue may also invoke the aid of any court of the United States having jurisdiction to require the attendance of such officers or employés and the production of such books and papers. Upon the information so acquired the commissioner of internal revenue may amend any return or make a return where none has been made. All proceedings taken by the commissioner of internal revenue

TAX ON CORPORATIONS

under the provisions of this section shall be subject to the approval of the secretary of the treasury.

5. All returns shall be retained by the commissioner of internal revenue, who shall make assessments thereon; and in case of any return made with false or fraudulent intent he shall add one hundred per cent. of such tax, and in case of a refusal or neglect to make a return or to verify the same as aforesaid he shall add fifty per cent. of such tax. In case of neglect occasioned by sickness or absence of an officer of such corporation, joint stock company, or association, or insurance company, required to make said return, or for other sufficient reason, the collector may allow such further time for making and delivering such return as he may deem necessary, not exceeding thirty days. The amount so added to the tax shall be collected at the same time and in the same manner as the tax originally assessed unless the refusal, neglect, or falsity is discovered after the date for the payment of said taxes, in which case the amount so added shall be paid by the delinquent corporation, joint stock company, or association, or insurance company, immediately upon notice given by the collector. All assessments shall be made and the several corporations, joint stock companies, or associations, or insurance companies, shall be notified of the amount for which they are respectively liable on or before the first day of June of each successive year, and said assessments shall be paid on or before the 30th day of June, except in cases of refusal or neglect to make such return, and in cases of false or fraudulent returns, in which cases the commissioner of internal revenue shall, upon the discovery thereof, at any time within three years after said return is due, make return upon information obtained as above provided for, and the assessment made by the commissioner of internal revenue thereon shall be paid by such corporation, joint stock company, or association, or insurance company, immediately upon notification of the amount of such assessment; and to any sum or sums due and unpaid after the 30th day of June in any year, and for ten days after notice and demand thereof by the collector, there

shall be added five per cent. on the amount of tax unpaid and interest at the rate of one per cent. per month upon said tax from the time the same becomes due.

6. When the assessment shall be made, as provided in this section, the returns, together with any corrections thereof which may have been made by the commissioner, shall be filed in the office of the commissioner of internal revenue and shall constitute public records and be open to inspection as such.

7. It shall be unlawful for any collector, deputy collector, agent, clerk, or other officer or employé of the United States to divulge or make known in any manner whatever not provided by law to any person any information obtained by him in the discharge of his official duty, or to divulge or make known in any manner not provided by law any document received, evidence taken, or report made under this section except upon the special direction of the President; and any offence against the foregoing provision shall be a misdemeanor and be punished by a fine not exceeding \$1000, or by imprisonment not exceeding one year, or both, at the discretion of the court.

8. If any of the corporations, joint stock companies, or associations, or insurance companies, aforesaid, shall refuse or neglect to make a return at the time or times hereinbefore specified in each year, or shall render a false or fraudulent return, such corporation, joint stock company, or association, or insurance company, shall be liable to a penalty not less than \$1000 and not exceeding \$10,000.

Any person authorized by law to make, render, sign, or verify any return who makes any false or fraudulent return, or statement, with intent to defeat or evade the assessment required by this section to be made, shall be guilty of a misdemeanor, and shall be fined not exceeding \$1000 or be imprisoned not exceeding one year, or both, at the discretion of the court, with the costs of prosecution.

All laws relating to the collection, remission, and refund of internal-revenue taxes, so far as applicable to and not inconsistent with the provisions of this section, are hereby extended and made ap-

TAX ON CORPORATIONS

plicable to the tax imposed by this section. Jurisdiction is hereby conferred upon the Circuit and District courts of the United States for the district within which any person summoned under this

section to appear to testify or to produce books, as aforesaid, shall reside, to compel such attendance, production of books and testimony by appropriate process.

INCOME-TAX AMENDMENT AND TAXES ON INHERITANCES

Income-tax Amendments and Taxes on Inheritances.—William E. Borah, the author of the first of the following articles, was elected to the United States Senate in January, 1907, from Idaho. He is a native of Illinois, born at Fairfield, June 29, 1865. He received his early education in the public schools of Illinois, and later was a student at the University of Kansas. In September, 1889, he was duly admitted to the bar and established practice at Boise, Idaho. He is a Republican.

It is persistently urged that by adopting the proposed constitutional amendment providing for the levying of an income tax without apportionment some new or additional taxing power will be conferred upon Congress, some limitation placed upon the powers of the State. Many are led to believe that we are in effect readjusting the taxing power as between the national and the State governments. With much apparent earnestness a warning is sent forth from certain sources every few days that the States should look well to this attempt to take away some of their present power. Even so profound a constitutional lawyer as ex-Senator Edmunds says, in an article lately printed in the *Congressional Record*: "In so sweeping and unlimited a form (is the proposed amendment) as to grant Congress the right to tax the very States themselves by impositions upon their bonds and other sources of revenue. . . . For what reason is this great and radical change and surrender proposed?"

What "radical change" is to be made, what "surrender proposed"? I submit that the position thus taken by the ex-Senator cannot be sustained upon either reason or authority.

Is there any doubt in the mind of any lawyer, or layman for that matter, who has considered the subject, that Congress has power to levy an income tax now—

under the Constitution as it at present exists? May we not, if we apportion the same, levy an income tax at the present time? Congress has the power now to do precisely that which is deemed revolutionary and destructive to the States. There has never been any difference of opinion among lawyers or in the decisions as to the power of Congress to levy an income tax. The sole question has been as to whether it should be apportioned or not, and the sole purpose and only effect of the amendment is to relieve from the necessity of apportionment. There was no necessity for any extension of power, but there was a necessity from a practical standpoint for changing the rule for the exercise of a conceded and unlimited power.

There is no kind of property, no income "from whatever source derived," which will be subject to taxation after the adoption of the amendment without apportionment which is not at the present time subject to taxation with apportionment. The taxation of State bonds and other securities will be no different with the amendment than without it. The Constitution says: "The Congress shall have power to lay and collect taxes, duties, imposts and excises," etc. Is there any kind of property or any kind of income, "from whatever source derived," excepted by this clause? If certain kinds of incomes are excepted, such as income from State bonds and other securities, where is the language or rule of construction which excepts them? Has any court ever intimated that in the taxing clause of the Constitution is to be found any exception as to incomes from State bonds or incomes "from whatever source derived"? On the other hand, from Marshall to Chief-Justice Fuller and Associate-Justice White in the Pollock case, it has been announced too often for reference that the taxing power as contained in the taxing clause of the

INCOME-TAX AMENDMENT AND TAXES ON INHERITANCES

Constitution is unlimited, unfettered, covering all kinds of property and all kinds of incomes. There is no doubt, if the taxing clause of the Constitution were construed standing alone and without regard to the fact that it is a part of an instrument of government and without regard to the scope, scheme, and plan of the instrument, that Congress would have the absolute power to tax the incomes of State bonds and other securities upon the same being apportioned. And if we should go back prior to 1894 and follow the rule given us by the courts for nearly a hundred years, we would have the right to tax them without apportionment.

Nevertheless, the Supreme Court has held that whether apportioned or not you cannot tax State bonds or any of the instrumentalities of the States. Not because the taxing power as quoted is not full and complete, but because this power must be construed in the light of the Constitution as a whole—its scope, purpose, and design. The scope, purpose, and design of the instrument are to create two separate, and within their granted and reserved powers, independent sovereignties. And it follows necessarily that neither should and that neither does have the power to embarrass or destroy the other. In other words, that there must always be subtracted from this unlimited taxing power, plenary though it be, the right of a State government to exist and perform its functions. Upon this principle, and upon this principle alone, the instrumentalities of the States are exempted. Marshall, when confronted with the claim of the States of the right to tax the instrumentalities of the national government, boldly stated that no provision of the Constitution could be found to prohibit such taxation. But said the justice: "There is no express provision (of the Constitution) for the case, but the claim has been sustained on a principle which so entirely pervades the Constitution, is so intermixed with the materials which compose it, so interwoven with its web, so blended with its texture, as to be incapable of being separated from it without rending it into shreds."

Later, when the question was presented as to the power of the government to tax the instrumentalities of the States, the

court was met with the rule long established that there was no limit to the taxing power of Congress. "That it might be exerted upon all individuals and upon every species of property" was conceded. If so, upon what theory was the income from State bonds or State officials' salaries to be exempted? Solely upon the theory that these sovereignties were in their spheres independent, and that the "admittedly unlimited power" to tax related alone to the property or incomes from sources within the jurisdiction of the sovereignty laying the tax. That the State government and its instrumentalities of sovereignty were not within the jurisdiction or subject to the control of the national government was the conclusion reached. The court said:

"It is admitted there is no express provision in the Constitution that prohibits the general government from taxing the means and instrumentalities of a State, nor is there any prohibiting the State from taxing the means and instrumentalities of the government. In both cases exemption rests upon necessary implication, and is upheld by the great law of self-preservation, as any government whose means employed in conducting its operations, if subject to the control of another and distinct government, can exist only at the mercy of that government."

It will be recalled that the income tax of 1864 covered specifically incomes from State securities and the salaries of State officers. This law was held constitutional. That is, it was held that the tax need not be apportioned. There was, therefore, before the court precisely the situation we would have should this amendment be adopted and the rule of apportionment discarded. We had an income-tax statute specifically covering the subject-matter of incomes from the State securities, and we had numerous decisions of the Supreme Court to the effect that the taxing power of Congress was plenary, and yet the court held that you could not tax State securities or bonds. Did the court so hold upon the theory that State bonds were excepted from the taxing power under the Constitution, or that the language of the taxing power was not sufficient to cover the same? By no means. On the other hand, in this very decision, it is said

INCOME-TAX AMENDMENT AND TAXES ON INHERITANCES

that there was no limitation to the taxing power of Congress. Did it hold this because the statute itself did not cover this kind of property? By no means. The effect of those decisions was that, notwithstanding the unlimited taxing power of Congress when standing alone, it must be construed in the light of the fact that we have a dual government. The decision was based upon the law of self-preservation—the whole scope and plan of government as outlined in the Constitution being that there were two separate and distinct sovereignties unembarrassed by each other.

Let us suppose that this amendment is adopted and Congress should pass a law levying an income tax upon the income from State bonds. It would then be said that a statute covering this specific kind of property passed under an amendment covering incomes "from whatever source derived" would certainly authorize the tax. But could it not be said in complete answer to this that upon several previous occasions Congress had passed a statute taxing incomes from State bonds under a constitutional provision which the court had held covered property of every nature and kind, but that aside from the plenary power of taxation and the specific provisions of the statute there was another principle which must obtain when construing the Constitution providing for a dual form of government and that that principle remains intact? The court did not hold, for instance, in the Pollock case that the income tax on State bonds was void because, it was unapportioned. It held, notwithstanding the language of the statute and the plenary power of the Constitution under which it was passed, that the national government could not tax these State bonds for the reasons theretofore announced in the case of *Collector vs. Day* and above quoted.

Apply *this* test to the argument of those who oppose the amendment: What power would the national government have after the adoption of this amendment that it has not now? None. It will have precisely the same power to tax to cover the same kind of property, but without apportionment. On the other hand, what power has the State now that it would not have after the amendment was

adopted? None. The rule under which the State bonds and State instrumentalities have been exempted for a hundred years from taxation is untouched and unchanged by this amendment. The reasons upon which the opinions are based holding them exempt would be precisely the same after as before the adoption of the amendment.

Is it not incumbent upon those who say that by adopting this amendment we will be able to tax State bonds and State instrumentalities to show as a basis for their contention that the reason why we have not been permitted to tax them heretofore is because there was an exception found in the taxing clause of the Constitution or because there was a limitation as to kinds of property to be taxed? They can show neither. Even in the Pollock case Justice Fuller said that, save as to exports, the taxing power of Congress "reaches every subject and may be exercised at discretion." Justice White said in the same case: "It is unquestioned that the provisions of the Constitution vest in the United States the plenary powers of taxation, and all we have to determine," continues the justice in that powerful dissenting opinion which has never been answered and never will be, "is not the existence of a power, but whether an admittedly unlimited power to tax has been used according to the instructions as to method." The majority and the minority were a unit as to the plenary power of Congress to tax; also a unit that, notwithstanding this plenary power, you could not tax State bonds apportioned or unapportioned. If the power to tax is complete and unfettered, covering all subjects and every kind of property, will this amendment add anything to it?

In this connection, in view of the holding of the court as to the extent of power now in Congress to tax, do the words "from whatever source derived" therefore add anything whatever to the strength or amplitude of the amendment? Do they include any property or kind of property not already included? For instance, if the amendment read: "Congress shall have power to lay and collect taxes on incomes without apportionment," would it not cover all incomes just as fully as the

INCOME-TAX AMENDMENT AND TAXES ON INHERITANCES

words "from whatever source derived"? Has it not been held universally that the words "Congress shall have power to lay and collect taxes" cover property or incomes from whatever source derived? So far as this clause itself is concerned, the words "from whatever source derived" are included in the general clause because it covers everything without exception. I grant that there was no need of using the words, and that it would perhaps have been better not to do so. It is never well to coin phrases when you know precisely what you wish to accomplish and have the phrases well embodied in the law and their meaning thoroughly established, at hand for ready use. But possibly this happened by reason of the manner in which the amendment came in. This amendment and the corporation tax were the twin children of legislative necessity. Those of us who favored the amendment to the tariff bill providing for an income tax, believing the court would reverse the Pollock case if the question were resubmitted, had secured enough votes to pass the amendment. Something had to be done. So this amendment and the corporation tax were brought in as a substitute, with the understanding and notice served that both had been formulated in the region of the immaculate and both were clothed and accompanied by the sustaining benediction of those who could not err and that no changes in the amendments were to be contemplated for a moment. And thus with that solemn and serious but complacent consideration which always obtains when divine things are passing by they went through the Senate.

Some seem to think that this amendment foreshadows an assault upon wealth. No sane man would take from industry its just reward or rob frugality of a fair and honest return. I believe in protection to wealth legitimately acquired and the absolute guarantee to property and property rights. These things are essential to the welfare of those who do not possess property as well as those who do, and no man would render them less efficient than they now are. But equality of burden and equal opportunity in the struggle for existence are also essential to any successful and continued plan for the protection of wealth and property. We lose

sight of the fact that, after all, in a government like ours statutes and constitutions cannot of themselves protect property. In the last analysis property can only be protected through an intelligent, law-abiding, and loyal citizenship. There is nothing in this world so blind, so incapable of appreciating the forces which in the end will destroy it as wealth. If it were not, it would realize that every time it invades the law of equal opportunity or the rule of equal burdens it is undermining its own stability and inviting its own ruin. Those who honestly and faithfully contend for the equal distribution of the great burdens of government, year by year increasing, who seek to protect the less fortunate and prosperous against the unjust accusations of selfishness and greed, are the real friends of property and the true defenders of law and order. Such men have no fight upon honest wealth. They realize its value and would protect it. But they know also that the man who walked down Fifth Avenue a few nights ago, hungry and haunted by the cries of his children, and threw a rock at the feasters in a palatial hotel, can no more be ignored in considering policies than the greatest of magnates who wearies of the burdens of his wealth. There are those who even dare to believe that purely as a matter of safeguarding our institutions and of preserving the guarantees of property, to say nothing of the demands of humanity, the legislator should look first into the causes which brought to this citizen of ours enforced hunger and idleness and seek to remedy the same rather than to devote his entire time to throwing protection around the feasters.

The Graduated Taxation of Incomes and Inheritances.—Wayne Mac Veagh, the author of the following article, has been for many years a conspicuous figure in American public life. In 1863 he was chairman of the Republican State Committee of Pennsylvania, his native State. In 1870-71 he represented the United States at Constantinople, and in 1872 he was appointed a member of the Pennsylvania Constitutional Convention. He presided over the commission which was sent to Louisiana by President Hayes in 1877 for the purpose of amicably adjusting the

INCOME-TAX AMENDMENT AND TAXES ON INHERITANCES

disputes of the contending parties there. He sat in the cabinet of President Garfield as Attorney-General, but on the accession of President Arthur he resigned his portfolio and resumed his law practice in Philadelphia. Mr. MacVeagh was United States ambassador to Italy from 1893 to 1897, and he was one of the counsel who contested the claims of the Allied Powers before the Hague Tribunal in the Venezuelan arbitration.

It ought to be confessed, on the threshold of the discussion of this subject, that it is somewhat disconcerting for one who has for some years been proposing, with very indifferent success, a particular extension of the principles of taxation, to find that such extension has attained a sudden and wholly unexpected importance, having become in a single day a question justifying immediate and earnest consideration.

For, whatever opinion may be entertained of the propriety or wisdom of President Roosevelt's recent expression in favor of graduated taxation, no sensible person can doubt that what he said to the Senators and Representatives assembled before him on the occasion of the laying of the corner-stone of the new Congressional building at Washington at once removed the question of such taxation from the realm of academic discussion, and brought it into the domain of practical politics and legislative enactment. It is, therefore, a dictate of "saving common sense," for all who sincerely desire that such taxation should be kept within safe and conservative bounds, to look the question thus suddenly presented by the President calmly and quietly in the face, to confront without alarm any dangers it may be supposed to bring in its train, and to thresh thoroughly out the problems the proposition suggests.

Such problems must finally be passed upon by the public opinion of the country; and it is indispensable that such opinion should be enlightened by a full and free discussion before it is called upon for a decision. It can be readily shown, if a proper effort is made to do so, that it is for the general public welfare, for the true welfare of every class in the community, that any scheme of graduated

taxation should be framed upon such a moderate basis as will leave room for the freest possible play and the fullest possible exercise of the energy, industry, and ability of every American citizen, by offering, to his praiseworthy ambition to acquire property, all such rewards in money as are compatible with even-handed justice to his fellows. He must not only be permitted, but encouraged to labor for his own advantage, so long as his advantage is consistent with the advantage of the community, as honest thrift always is.

It was, however, astonishing to observe that President Roosevelt's mild words caused something resembling consternation, even in intelligent quarters. This attitude towards his suggestion is the more surprising because the writer of this article succeeded eight years ago in persuading the late Senator Wolcott, of Colorado, that graduated taxation was a beneficent form of imposing taxes, and in inducing him to propose such taxation of inheritances as part of the War Revenue Act then pending in Congress. It was presented by him, accepted by both Houses, and approved by President McKinley on June 13, 1898.

As it was a tentative measure, its terms were purposely made very moderate, but it distinctly affirmed the principle of graduated taxation by steadily increasing the rate to be levied as the amount of the inheritance increased. It was modelled in this respect upon the act by which the Parliament of Great Britain had, four years before, imposed a graduated tax, but at a heavier rate, upon inheritances. This law remained in force for four years and was only repealed with the other war taxes.

It is hardly necessary to say that it had in the mean time been vigorously assailed as unconstitutional. Capitalists exhibit a singular stupidity in resisting every attempt to impose upon them their proper share of the public burdens; and, as they had succeeded in annulling the law imposing a very modest proportional tax upon their incomes, they assumed they would easily annul a law imposing a graduated tax upon their inheritances. Twenty leading members of the bar appeared in the attack upon the law and only one in defence of it—the then

INCOME-TAX AMENDMENT AND TAXES ON INHERITANCES

Solicitor-General. The result was that the constitutionality of such method of taxation by Congress was conclusively established in a masterly opinion by Mr. Justice White, in the course of which he used this suggestive language:

"The review which we have made exhibits the fact that taxes imposed with reference to the ability of the person on whom the burden is placed to bear the same have been levied since the foundation of the government. So, also, some authoritative thinkers and a number of economic writers contend that a progressive tax is more just and equal than a proportional one. In the absence of constitutional limitation, the question whether it is or is not legislative, and not judicial. The grave consequences which, it is asserted, must arise in the future, if the right to lay a progressive tax be recognized, involves in its ultimate aspect the mere assertion that free and representative government is a failure."

This weighty utterance is not only illuminating, as disposing of all question as to the right of Congress to impose a system of graduated taxation, but its concluding words make a serious appeal to all American citizens who, so far from believing that free and representative government is a failure, believe, with a faith which can never be shaken, that it is, with all its drawbacks, the best form of government ever vouchsafed to the children of men. They fully recognize that eternal vigilance is the price which must be paid for its blessings—that all good citizens must become "practical politicians," sometimes turning their backs upon what Lord Bacon calls "the idols of the market-place," and turning their faces towards political meetings and the polling-booths. They must labor to make the public service a service pure and undefiled, worthy of the best efforts of the best men. When this is done our form of government will abundantly justify itself. If the rich will honestly attend to their political duties all will go well.

The question now under consideration ought to be, indeed must be, if private property is to be safe, discussed fully and thoroughly, and all classes of voters must be shown what are the proper bases of the graduated taxation of "surplus

wealth," whether as income or as inheritance. There is no use in pretending that the proposal to establish such a system of taxation is of a radical, much less of a revolutionary, character, or in attempting to persuade the American electorate that it is a wicked attack upon private property to ask Congress to adopt a system of taxation which has been accepted by the most aristocratic and conservative legislative assemblage in the world—the House of Lords of Great Britain. After twelve years' experience of it the graduated taxation of inheritances is now firmly established as part of the permanent financial policy of the United Kingdom.

It is also an interesting coincidence that while President Roosevelt limited himself, at least for the present, to the graduated taxation of inheritances, Mr. Asquith, as Chancellor of the Exchequer, within a fortnight afterwards was telling the House of Commons that "the time has arrived for an inquiry into the practicability of a graduated tax upon incomes." Surely, if the time has arrived for the legislature of Great Britain, composed of King, Lords, and Commons, to take the subject into consideration, it cannot be too early for our own Congress to do so; and it must be expected that, at its next session, bills will probably be introduced imposing graduated taxes upon both incomes and inheritances, notwithstanding the decision by a divided court against the recent proportional income tax. It is, indeed, believed by many persons that, when the question is again presented, an income tax will be upheld. If so no time ought to be lost in endeavoring to impress upon the public mind the necessity of proper limits upon such taxation.

But it will be utterly useless in any such discussion to pretend that there is anything new or startling in proposing, in the apt words of Mr. Justice White, to impose taxes "with reference to the ability of the person upon whom the burden is placed to bear the same"—that is, increasing the rate of taxation to keep pace with the wealth of the persons taxed. Indeed, it is a hundred and thirty years since Adam Smith announced that "the subjects of every State ought to contribute towards the support of its govern-

TAXES

ment as nearly as possible in proportion to their respective abilities"; and John Stuart Mill, at a later day, declared with even greater emphasis: "Equality of taxation, as a maximum of politics, means equality of sacrifice. It means the apportioning the contribution of each person towards the expenses of the government, so that he shall feel neither more nor less inconvenience from his share of the payment than every other person experiences from his." Professor Nicholson adds: "It is admitted that this standard cannot be completely realized; but it is thought to furnish a proper foundation for remission in some cases and for proportional increase of taxation in others." Complete realization in political economy of any standard of abstract justice is still far to seek; but there must be a reasonable and just basis for at least an approach to equality of sacrifice in the imposition of the taxes in question.

The sociological question ought also to be freely discussed—that is: Ought there to be a limit fixed beyond which, for the public welfare, the further accumulation of surplus wealth should be discouraged? If so, where should the limit be placed and the discouragement begin, and at what ratio should the discouragement proceed? And if there is to be such discouragement, is a system of graduated taxation the most effective and least ob-

jectionable method of applying it? The suggestions formerly made in reference to such a system were concerned with apportioning the inevitable burdens of taxation. These latter suggestions relate themselves to the welfare of society, and raise the question whether gigantic fortunes are in themselves, or in the methods of their acquisition, such serious obstacles to the contentment, the peace, and the healthy growth of the community as to call for their abatement. We are to-day face to face with these grave and far-reaching problems. It is impossible either to avoid them or to postpone them. All that is left for us is to discuss them and to endeavor to settle them upon some sane and rational basis. It is equally futile and cowardly to pretend that they do not exist or that we need not bother ourselves about them. President Roosevelt having "set the ball rolling," it will roll on until a solution is found, fairly satisfactory to the majority of the voters—some workable basis of agreement between those who have good reasons to be contented with their generous share of the common property of the nation and those who, perhaps, have as good reason to be discontented with their meagre share of it. It is surely the part of wisdom and of patriotism to hasten the finding of such a workable basis of agreement before it is too late.

TAXES

Taxes are a fundamental necessity for any government, savage, barbarous, or civilized. There is no real science of taxation, no natural laws controlling taxation and its effects, unless it be (1) that attributed to Calbert, the celebrated finance minister of Louis XIV., who said that "the science of taxation consists entirely in so plucking the goose (that is, the people) as to produce the greatest quantity of feathers with the least complaint," and (2) that each person should pay his just share. For this reason all governments have always preferred indirect taxation, which prevents the ultimate consumer from knowing the amount of taxes he pays, as those who pay these taxes directly to the government add the

full amount, and frequently much more, to the prices of the articles sold to the consumer, who is the real taxpayer. Direct taxes, such as the poll tax, the tax on testamentary bequests, income tax, etc., cannot be shifted.

In the United States taxes imposed for the support of the federal government are mainly indirect taxes, such as customs and excise. The Constitution gives Congress "power to collect taxes, duties, imposts, and excises, to pay the debts and provide for the common defence and general welfare of the United States," subject to restrictions, no capitation or other direct tax to be laid unless in proportion to the census. The first direct tax (\$2,000,000) was levied upon the sixteen

TAXES

States, *pro rata*, in 1798. Subsequently the tax was levied in 1813, 1815, 1816, and 1861. That of 1861 (\$20,000,000) was refunded, March 2, 1891. According to rulings of the Supreme Court, Congress has no power to levy duties on exports, and the restriction upon direct taxation does not apply to an income tax. The systems and rates of State, county, and municipal taxation are numerous and constantly changing, but the taxes are direct, and are levied upon the assessed value of real estate and personal property. According to the SINGLE-TAX (*q. v.*) theory, advocated by HENRY GEORGE (*q. v.*) and others, taxation should be solely on land value, exclusive of improvements. The development of the present system of federal taxation is shown below:

Duties laid upon spirits distilled within the United States from foreign and home material, March 3, 1791, followed by an act further regulating these duties and imposing a tax on stills

May 8, 1792

Execution of the above laws leads to the whiskey insurrection in Pennsylvania

1794

Duties imposed on licenses for selling wines and foreign distilled spirituous liquors by retail; 8 cents per lb. on all snuff manufactured for sale within the United States; 2 cents per lb. on sugar refined within the United States; and specific duties as follows: On every coach, \$10 yearly; chariot, \$8; phaeton, \$6; wagons used in agriculture or transportation of goods, exempt by act

June 5, 1794

Duties laid on property sold at auction

June 9, 1794

Taxes on snuff repealed and duty laid on snuff-mills.....March 3, 1795

Duties on carriages increased by act

May 28, 1796

Duties laid on stamped vellum, parchment, and paper by act.....July 6, 1797

Direct tax of \$2,000,000 laid, proportioned among the States.....July 14, 1798

Act to establish a general stamp-office at seat of government....April 23, 1800

Duty on snuff-mills repealed

April 24, 1800

Repeal of act taxing stills and domestic distilled spirits, refined sugar, licenses

to retailers, sales at auction, carriages, stamped vellum, parchment, and paper after June 30.....April 6, 1802

Act passed imposing duties of 1 per cent. on sales at auction of merchandise and 25 per cent. on ships and vessels, on licenses to distillers of spirituous liquors: and on sugar refined within the United States.....July 24, 1813

Act passed imposing duties on licenses to retailers of wines, spirituous liquors, and foreign merchandise, and on notes of banks, etc., bonds and obligations discounted by banks, and on certain bills of exchange.....Aug. 2, 1813

Direct tax of \$3,000,000 imposed on States by counties.....Aug. 2, 1813

Duties laid on carriages and harness, except those exclusively employed in husbandry.....Dec. 15, 1814

Fifty per cent. added upon licenses to retailers of wines, etc., and 100 per cent. on sales by auction.....Dec. 23, 1814

Direct tax of \$6,000,000 laid upon the United States annually.....Jan. 9, 1815

Internal-revenue tax of \$1 per ton imposed on pig-iron; 1 cent per lb. on nails; also tax on candles, paper, hats, umbrellas, playing-cards, boots, tobacco, leather, etc., and an annual duty on household furniture, and gold and silver watches, by act.....Jan. 18, 1815

Internal-revenue tax on gold and silver and plated ware, jewelry, and paste-work manufactured within the United States
Feb. 27, 1815

Direct tax of \$19,998.40 laid on the District of Columbia annually, by act

Feb. 27, 1815

Acts of Jan. 18 and Feb. 27, 1815, repealed.....Feb. 22, 1816

Act of Jan. 9, 1815, and Feb. 27 repealed, and direct tax of \$3,000,000 laid on the States, and direct tax of \$9,999.20 laid on the District of Columbia

March 5, 1816

Duties on household furniture and watches kept for use removed by act

April 9, 1816

Acts of July 24, 1813, and Aug. 2, Dec. 15 and 23, 1814, repealed....Dec. 23, 1817

Act passed allowing States to tax public lands of the United States after they are sold by the United States..Jan. 26, 1847

Direct tax of \$20,000,000 laid annually, and apportioned to the States by act of

TAXES—TAYLOR

Congress (one tax to be levied previous to April 1, 1865).....Aug. 5, 1861

Act passed to provide internal revenue to support the government and to pay interest on the public debt, imposing taxes on spirits, ale, beer, and porter, licenses, manufactured articles and products, auction sales, yachts, billiard-tables, slaughtered cattle, sheep, and hogs, railroads, steamboats, ferry-boats, railroad bonds, banks, insurance companies, etc., salaries of officers in service of the United States, advertisements, incomes, legacies, business papers of all kinds, like bank-checks, conveyances, mortgages, etc.....July 1, 1862

Act to increase internal revenue passed March 7, 1864

Act of Aug. 5, 1861, repealed June 30, 1864

Act passed to reduce internal taxation July 13, 1866

Internal-revenue taxes reduced by acts of July 14, 1870, and June 6.....1872

All special taxes imposed by law accruing after April 30, 1873, including taxes on stills, to be paid by stamps denoting the amount of tax, by act....Dec. 24, 1872

Internal-revenue tax on tobacco, snuff, and cigars increased, and former tax of 70 cents per gallon on distilled spirits raised to 90 cents, by act...March 3, 1875

Internal-revenue tax on tobacco reduced by act.....March 1, 1879

Henry George's *Progress and Poverty*, advocating the "Single-tax" theory, published1879

Act passed reducing internal-revenue taxes, and repealing tax on banks, checks, etc., matches, and medicinal preparations March 3, 1883

Special tax laid on manufacturers and dealers in oleomargarine, and a stamp tax of 2 cents per lb. laid on the manufactured article.....Aug. 2, 1886

Special internal-revenue tax on dealers in tobacco repealed, and tax on tobacco and snuff reduced by act....Oct. 1, 1890

Act passed to refund to the several States and Territories the amount of direct tax paid under act of Aug. 5, 1861

March 2, 1891

Income tax appended to the Wilson tariff bill and passed with it, becoming a law.....Aug. 27, 1894

Declared unconstitutional by the United States Supreme Court....May 20, 1895

The Spanish War revenue act was approved by the President....June 13, 1898

An act relieving many articles from the war-revenue tax, to take effect July 1, 1901

Congress passes a joint resolution, proposing an income-tax amendment to the Constitution, for ratification by the States July 5, 1909

Payne-Aldrich tariff law imposes a tax on corporations; approved by the PresidentAug. 5, 1909

Taxes, DIRECT. Only five times in the history of the country has a direct tax been successfully levied by Congress. In 1798 a direct tax of 50 cents was levied on every slave in the United States. In 1813, 1815, 1816, and 1861 taxes were levied upon all dwelling-houses, lands, and slaves, and apportioned among the States according to their population. The tax of 1861 was made necessary in order to defray the expenses of the war just then beginning, and all the loyal States, except Delaware, assumed its payment. Thirty years afterwards, in 1891, Congress passed an act providing that the taxes thus contributed for the prosecution of the war should be returned to the several States which had paid them. Under this act the total amount refunded to the State treasuries reached nearly \$15,000,000. Of this New York, of course, received the largest share, nearly \$3,000,000. Taxes on incomes above \$4,000 were collected in 1895 under a law passed Dec. 12, 1894. This measure aroused great opposition among merchants, bankers, and brokers, and John G. Moore, of New York, brought a suit to restrain the internal-revenue collector from collecting the tax. On Jan. 23, 1895, the constitutionality of the tax was affirmed. Appeal was made to the United States Supreme Court, which, on April 8, 1895, declared the income tax unconstitutional. Only about \$75,000 had been collected under the law, and this was returned. The decision aroused much comment, and caused great dissatisfaction among the poorer classes.

Taylor, BAYARD, traveller; born in Kennet Square, Pa., Jan. 11, 1825; became a printer's apprentice at seventeen years of age, and at about the same time wrote verses with much facility. His rhymes were collected and published in a volume in 1844, entitled *Ximena*. In 1844-

TAYLOR

46 he made a tour on foot in Europe, of which he published (1846) an account in *Views Afoot*. In 1847 he went to New York and wrote for the *Literary World* and for the *Tribune*, and in 1848 published *Rhymes of Travel*. In 1849 he be-

BAYARD TAYLOR.

came owner of a share in the *Tribune*, and was one of the shareholders at the time of his death. After serving two months as the secretary of the American legation at Shanghai, he joined the expedition of Commodore Perry to Japan. In the spring of 1878 he went to Berlin as American minister at the German court, and died there, Dec. 19, 1878.

Taylor, FRED MANVILLE, educator; born in Northville, Mich., July 11, 1855; graduated at Northwestern University in 1876; was Professor of History in Albion College in 1879-92; assistant Professor of Political Economy and Finance in the University of Michigan in 1892-94; and junior Professor of Political Economy and Finance in 1895. He wrote *The Right of the State to Be; Do We Want an Elastic Currency? The Object and Methods of Currency; Reform in the United States*, etc.

Taylor, GEORGE, a signer of the Declaration of Independence; born in Ireland in 1716; arrived in the United States at

the age of twenty years, but, having a good education, rose from the position of a day laborer in an iron foundry to the station of clerk, and finally married his employer's widow and acquired a handsome fortune. For five consecutive years he was a prominent member of the Pennsylvania Assembly, and in 1770 was made judge of the Northumberland county court. He was elected to Congress July 20, 1776, and signed the Declaration of Independence on Aug. 2. He died in Easton, Pa., Feb. 23, 1781.

Taylor, JAMES WICKES, author; born in Starkey, N. Y., Nov. 6, 1819; graduated at Hamilton College in 1838; admitted to the bar and practised in Ohio in 1842-56; special United States treasury agent in 1860-70; and United States consul at Winnipeg, Canada, in 1870-93. His publications include *History of Ohio*; *First Period, 1620-1787*; *Manual of the Ohio School System*; *Reports to Treasury Department on Commercial Relations with Canada*; *Alleghania, or the Strength of the Union and the Weakness of Slavery in the Highlands of the South*, etc. He died in Winnipeg, Manitoba, Canada, April 28, 1893.

Taylor, JOHN, Mormon; born in Wintthrop, England, Nov. 1, 1808; went to Toronto, Canada, in 1832; was there converted to Mormonism by the preaching of Parley D. Pratt in 1836; was made an apostle in 1838 and settled in Missouri. He was with Joseph Smith when the latter was killed, and was himself shot four times. He represented Utah Territory in Congress. In 1877, on the death of Brigham Young, he was elected president of the Church, and in 1880 became head and prophet of the Mormon Church. He was indicted for polygamy in March, 1885, and in order to avoid arrest he exiled himself. He died July 25, 1887.

Taylor, JOHN, "of Caroline"; born in Orange county, Va., in 1750; graduated at William and Mary in 1770; United States Senator, 1792-94, 1803, and 1822-24. He was the mover of the Virginia Resolutions of 1798 (see KENTUCKY AND VIRGINIA RESOLUTIONS). He wrote several works on the Constitution and the policy of the United States. He died in Caroline county, Va., Aug. 20, 1824.

Taylor, JOHN W., lawyer; born in Charlton, N. Y., March 26, 1784; grad-

Zachary Taylor.

TAYLOR

uated at Union College in 1803; admitted to the bar in 1807; practised in Ballston; member of Congress in 1813-33; succeeded Henry Clay as speaker in 1820, and held that place till the close of the second session; was again speaker in 1825-27; was opposed to the extension of slavery during the prolonged agitation of that question in Congress. He died in Cleveland, O., Sept. 8, 1854.

Taylor, RICHARD, military officer; born in New Orleans, La., Jan. 27, 1826; son of President Zachary Taylor; graduated at Yale College in 1845; and entered the Mexican War with his father. In 1861 he became colonel of the 9th Louisiana Volunteers in the Confederate service, and was in the battle of Bull Run. In October he was made a brigadier-general; served under "Stonewall" Jackson in Virginia; was promoted to major-general; and in 1863-64 served under E. Kirby Smith in the trans-Mississippi Department, opposing Banks in his Red River expedition. When Banks left Alexandria, on the Red River, and marched to the siege of Port Hudson General Taylor, whom he had driven into the wilds of western Louisiana, returned, occupied that abandoned city and Opelousas, and garrisoned Fort De Russy. Then he swept vigorously over the country in the direction of the Mississippi River and New Orleans. With a part of his command he captured Brashear City (June 24, 1863), with an immense amount of public property and the small-arms of 4,000 National troops. By this movement about 5,000 refugee negroes were remanded into slavery. Another portion of the Confederates, under General Greene, operating in the vicinity of Donaldsonville, on the Mississippi, was driven out of that district. New Orleans was then garrisoned by only about 700 men, when a way was opened for Taylor to Algiers, opposite; but the Confederate leader was unable to cross the Mississippi, for Farragut's vessels were patrolling its waters and guarding the

city. When Banks's forces were released by the surrender of Port Huron (July 9) they proceeded to expel Taylor and his forces from the country eastward of the Atchafalaya. This was the last struggle of Taylor to gain a foothold on the Mississippi. Afterwards he was in command at Mobile, and on May 4, 1865, surrendered to General Canby. He died in New York City, April 12, 1879.

Taylor, WILLIAM, clergyman; born in Rockbridge county, Va., May 2, 1821; was educated in Lexington, Va.; entered the ministry of the Methodist Episcopal Church in 1842; went to California as a missionary in 1849; spent several months in evangelistic work in the English-speaking countries of the world; and was made missionary bishop of Africa in 1884. He was the author of *Seven Years' Street Preaching in San Francisco*; *California Life Illustrated*, etc. He died at Palo Alto, Cal., May 18, 1902.

Taylor, WILLIAM ROGERS, naval officer; born in Newport, R. I., Nov. 7, 1811; son of Capt. William Vigeron Taylor; entered the navy in 1828; he was engaged on the Mexican coast during the war (1846-48), and in the Atlantic blockading squadron in 1862-63; was flag-captain in operations against Forts Wagner and Sumter in 1863; and was in the North Atlantic blockading squadron in 1864-65, engaging in both attacks on Fort Fisher. In 1871 he was promoted rear-admiral; in 1873 was retired. He died in Washington, D. C., April 14, 1889.

Taylor, WILLIAM VIGERON, naval officer; born in Newport, R. I., in 1781; having been for some time in the merchant-marine service, was appointed sailing-master in the navy in April, 1813, and ably assisted in fitting out Perry's fleet at Erie. He navigated Perry's flag-ship (*Lawrence*) into and during the battle. His last service was on a cruise in the Pacific, in command of the *Ohio*, seventy-four guns, in 1847. He died in Newport, R. I., Feb. 11, 1858.

TAYLOR, ZACHARY

Taylor, ZACHARY, twelfth President of the United States; from March 4, 1849, to July 9, 1850; Whig; born in Orange county, Va., Sept. 24, 1784. His father,

a soldier of the Revolution, removed from Virginia to Kentucky in 1785, where he had an extensive plantation near Louisville. On that farm Zachary was engaged

TAYLOR, ZACHARY

until 1808, when he was appointed to fill the place of his brother, deceased, as lieutenant in the army. He was made a captain in 1810; and after the declaration of war, in 1812, was placed in command of Fort Harrison, which he bravely defended against an attack by the Indians. Taylor was active in the West until the end of the war. In 1814 he was commissioned a major; but on the reduction of the army, in 1815, was put back to a captaincy, when he resigned, and returned to the farm near Louisville. Being soon reinstated as major, he was for several years engaged in military life on the northwestern frontier and in the South. In 1819 he was promoted to lieutenant-colonel. In 1832 he was commissioned a colonel, and was engaged in the BLACK HAWK WAR (*q. v.*). From 1836 to 1840 he served in Florida (see SEMINOLE WAR), and in 1840 was appointed to the command of the 1st Department of the Army of the Southwest, with the rank of brevet brigadier-general. At that time he purchased an estate near Baton Rouge, to which he removed his family.

After the annexation of TEXAS (*q. v.*), when war between the United States and Mexico seemed imminent, he was sent with

then promoted to major-general. He entered Mexico May 18, 1846, and soon afterwards captured the stronghold of Monterey. He occupied strong positions, but remained quiet for some time, awaiting instructions from his government. Early in 1847 a requisition from General Scott deprived him of a large portion of his troops, and he was ordered to act on the defensive only. While so doing, with about 5,000 men, he was confronted by Santa Ana with 20,000. Taylor defeated and dispersed the Mexicans in a severe battle at Buena Vista, Feb. 23, 1847. During the remainder of the war the valley of the Rio Grande remained in the quiet possession of the Americans. In his campaign in Mexico he acquired the nickname of "Old Rough and Ready," in allusion to the plainness of his personal appearance and deportment.

On his return home, in November, 1847, he was greeted everywhere with demonstrations of warmest popular applause. In June, 1848, the Whig National Convention, at Philadelphia, nominated him for President of the United States, with Millard Fillmore, of New York, for Vice-President. He was elected, and inaugurated March 5, 1849. On July 4, 1850, he was

GENERAL TAYLOR'S RESIDENCE AT BATON ROUGE.

a considerable force into Texas to watch the movements of the Mexicans. In March, 1846, he moved to the banks of the Rio Grande, opposite Matamoras, and in May engaged in two sharp battles with the Mexicans on Texas soil. He was

seized with a violent fever, and died on the 9th. He was attended in his last moments by his wife; his daughter (Mrs. Colonel Bliss) and her husband; his son, Colonel Taylor, and family; his son-in-law, Jefferson Davis, and family; and by Vice-

TAYLOR, ZACHARY

President Fillmore, other officers of the government, members of the diplomatic corps, etc. His last audible words were: "I am about to die. I expect the summons soon. I have endeavored to discharge all my official duties faithfully. I regret nothing, but am sorry that I am about to leave my friends." The funeral occurred on Saturday, July 13, and was attended by a vast concourse of citizens and strangers. The pageant exceeded everything of the kind, in order and magnificence, that had ever taken place at the national capital.

The Central American States.—On March 18, 1850, President Taylor sent the following message to the Congress concerning new treaties with the Central American States, the American political policy towards them, and the pretensions of Great Britain in Nicaragua:

WASHINGTON, March 19, 1850.

To the Senate of the United States,—I herewith transmit to the Senate, for their advice in regard to its ratification, "a general treaty of amity, navigation, and commerce" between the United States of America and the State of Nicaragua, concluded at Leon by E. George Squier, *chargé d'affaires* of the United States, on their part, and Señor Zepeda on the part of the republic of Nicaragua.

I also transmit, for the advice of the Senate in regard to its ratification, "a general treaty of amity, navigation, and commerce" negotiated by Mr. Squier with the republic of San Salvador.

I also transmit to the Senate a copy of the instructions to and correspondence with the said *chargé d'affaires* relating to those treaties.

I also transmit, for the advice of the Senate in regard to its ratification, "a general treaty of peace, amity, commerce, and navigation" negotiated by Elijah Hise, our late *chargé d'affaires*, with the State of Guatemala.

I also transmit, for the information of the Senate, a copy of a treaty negotiated by Mr. Hise with the government of Nicaragua on June 21 last, accompanied by copies of his instructions from and correspondence with the Department of State.

On Nov. 12, 1847, Señor Buétrago,

secretary of state and of the affairs of war and foreign relations and domestic administration of the supreme government of the state of Nicaragua, addressed a letter from the government house at Leon to Mr. Buchanan, then Secretary of State of the United States, asking the friendly offices of this government to prevent an attack upon the town of San Juan de Nicaragua then contemplated by the British authorities as the allies of the Mosquito King. That letter, a translation of which is herewith sent, distinctly charges that—

The object of the British in taking this key of the continent is not to protect the small tribe of the Mosquitos, but to establish their own empire over the Atlantic extremity of the line, by which a canal connecting the two oceans is most practicable, insuring to them the preponderance of the American continent, as well as their direct relations with Asia, the East Indies, and other important countries in the world.

No answer appears to have been returned to this letter.

A communication was received by my predecessor from Don José Guerrero, President and Supreme Director of the state of Nicaragua, dated Dec. 15, 1847, expressing his desire to establish relations of amity and commerce with the United States, a translation of which is herewith enclosed. In this the President of Nicaragua says:

"My desire was carried to the utmost on seeing in your message at the opening of the Twenty-ninth Congress of your republic a sincere profession of political faith in all respects conformable with the principles professed by these States, determined, as they are, to sustain with firmness the continental cause, the rights of Americans in general, and the non-interference of European powers in their concerns."

This letter announces the critical situation in which Nicaragua was placed, and charges upon the Court of St. James a "well-known design to establish colonies on the coast of Nicaragua and to render itself master of the interoceanic canal, for which so many facilities are presented by the isthmus in that state." No reply was made to this letter.

TAYLOR, ZACHARY

The British ships-of-war *Alarm* and *Vixen* arrived at San Juan de Nicaragua on Feb. 8, 1848, and on the 12th of that month the British forces, consisting of 260 officers and men, attacked and captured the post of Serapaquid, garrisoned, according to the British statements, by about 200 soldiers, after a sharp action of one hour and forty minutes.

On March 7, 1848, articles of agreement were concluded by Captain Locke, on the part of Great Britain, with the commissioners of the state of Nicaragua in the island of Cuba, in the Lake of Nicaragua, a copy of which will be found in the correspondence relating to the Mosquito Territory presented to and published by the House of Commons of Great Britain on July 3, 1848, herewith submitted. A copy of the same document will also be found accompanying the note of the minister for foreign affairs of Nicaragua to the Secretary of State of the United States under date March 17, 1848.

By the third article of the agreement it is provided that Nicaragua "shall not disturb the inhabitants of San Juan, understanding that any such act will be considered by Great Britain as a declaration of open hostilities." By the sixth article it is provided that these articles of agreement will not "hinder Nicaragua from soliciting by means of a commissioner to her Britannic Majesty a final arrangement of these affairs."

The communication from Señor Sebastian Salinas, the secretary of foreign affairs of the state of Nicaragua, to Mr. Buchanan, the Secretary of State of the United States, dated March 17, 1848, a translation of which is herewith submitted, recites the aggressions of Great Britain and the seizure of a part of the Nicaraguan territory in the name of the Mosquito King. No answer appears to have been given to this letter.

On Oct. 28, 1847, Joseph W. Livingston was appointed by this government consul of the United States for the port of San Juan de Nicaragua. On Dec. 16, 1847, after having received his exequatur from the Nicaraguan government, he addressed a letter to Mr. Buchanan, Secretary of State, a copy of which is herewith submitted, representing that he had been informed that the English government

would take possession of San Juan de Nicaragua in January, 1848.

In another letter, dated April 8, 1848, Mr. Livingston states that "at the request of the minister for foreign affairs of Nicaragua he transmits a package of papers containing the correspondence relative to the occupation of the port of San Juan by British forces in the name of the Mosquito nation."

On June 3, 1848, Elijah Hise, being appointed *chargé d'affaires* of the United States to Guatemala, received his instructions, a copy of which is herewith submitted. In these instructions the following passages occur:

"The independence as well as the interests of the nations on this continent require that they should maintain the American system of policy entirely distinct from that which prevails in Europe. To suffer any interference on the part of the European governments with the domestic concerns of the American republics, and to permit them to establish new colonies upon this continent, would be to jeopard their independence and to ruin their interests. These truths ought everywhere throughout this continent to be impressed on the public mind. But what can the United States do to resist such European interference while the Spanish-American republics continue to weaken themselves by division and civil war, and deprive themselves of the ability of doing anything for their own protection."

This last significant inquiry seems plainly to intimate that the United States could do nothing to arrest British aggression while the Spanish-American republics continue to weaken themselves by division and civil war, and deprive themselves of the ability of doing anything for their protection.

These instructions, which also state the dissolution of the Central American republic, formerly composed of the five states of Nicaragua, Costa Rica, Honduras, San Salvador, and Guatemala, and their continued separation, authorize Mr. Hise to conclude treaties of commerce with the republics of Guatemala and San Salvador, but conclude with saying that it was not deemed advisable to empower Mr. Hise to conclude a treaty with either Nicaragua, Honduras, or Costa Rica until

TAYLOR, ZACHARY

more full and statistical information should have been communicated by him to the Department in regard to those states than that which it possesses.

The states of Nicaragua, Costa Rica, and Honduras are the only Central American states whose consent or co-operation would in any event be necessary for the construction of the ship-canal contemplated between the Pacific and Atlantic oceans by the way of Lake Nicaragua.

In pursuance of the sixth article of the agreement of March 7, 1848, between the forces of Great Britain and the authorities of Nicaragua, Señor Francisco Castillon was appointed commissioner from Nicaragua to Great Britain, and on Nov. 5, 1848, while at Washington, on his way to London, addressed a letter to the Secretary of State, a translation of which is herewith submitted, asking this government to sustain its minister plenipotentiary residing in London to sustain the right of Nicaragua to her territory claimed by Mosquito, and especially to the port of San Juan, expressing the hope of Nicaragua "that the government of the Union, firmly adhering to its principle of resisting all foreign intervention in America, would not hesitate to order such steps to be taken as might be effective before things reached a point in which the intervention of the United States would prove of no avail."

To this letter also no answer appears to have been returned, and no instructions were given to our minister in London in pursuance of the request contained in it.

On March 3, 1847, Christopher Hempstead was appointed consul at Belize, and an application was then made for his exequatur through our minister in London, Mr. Bancroft. Lord Palmerston referred to Mr. Bancroft's application for an exequatur for Mr. Hempstead to the Colonial Office. The exequatur was granted, and Mr. Hempstead, in a letter to the Department of State bearing date of Feb. 12, 1848, a copy of which is herewith submitted, acknowledged the receipt of his exequatur from her Britannic Majesty, by virtue of which he has discharged his consular functions. Thus far this government has

recognized the existence of a British colony at Belize, within the territory of Honduras. I have recalled the consul, and have appointed no one to supply his place.

On May 26, 1848, Mr. Hempstead represented in a letter to the Department of State that the Indians had "applied to her Majesty's superintendent at Belize for protection, and had desired him to take possession of the territory which they occupied and take them under his protection as British subjects"; and he added that in the event of the success of their application "the British government would then have possession of the entire coast from Cape Conte to San Juan de Nicaragua." In another letter, dated July 29, 1848, he wrote:

"I have not a doubt but the designs of her Majesty's officers here and on the Mosquito shore are to obtain territory on this continent."

The receipt of this letter was regularly acknowledged on Aug. 29, 1848.

When I came into office I found the British government in possession of the port of San Juan, which it had taken by force of arms after we had taken possession of California, and while we were engaged in the negotiation of a treaty for the cession of it, and that no official remonstrance had been made by this government against the aggression, nor any attempt to resist it. Efforts were then being made by certain private citizens of the United States to procure from the state of Nicaragua by contract the right to cut the proposed ship-canal by the way of the river San Juan and the lakes of Nicaragua and Managua to Realejo, on the Pacific Ocean. A company of American citizens entered into such a contract with the state of Nicaragua. Viewing the canal as a matter of great importance to the people of the United States, I resolved to adopt the policy of protecting the work and binding the government of Nicaragua, through whose territory it would pass, also to protect it. The instructions to E. George Squier, appointed by me *chargé d'affaires* to Guatemala on April 2, 1849, are herewith submitted as fully indicating the views which governed me in directing a treaty to be made with Nicaragua. I considered the interference of the British government

TAYLOR, ZACHARY

on this continent in seizing the port of San Juan, which commanded the route believed to be the most eligible for the canal across the isthmus, and occupying it at the very moment when it was known, as I believe, to Great Britain that we were engaged in the negotiation for the purchase of California, as an unfortunate coincidence, and one calculated to lead to the inference that she entertained designs by no means in harmony with the interests of the United States.

Seeing that Mr. Hise had been positively instructed to make no treaty, not even a treaty of commerce, with Nicaragua, Costa Rica, or Honduras, I had no suspicion that he would attempt to act in opposition to his instructions, and in September last I was for the first time informed that he had actually negotiated two treaties with the state of Nicaragua, the one a treaty of commerce, the other a treaty for the construction of the proposed ship-canal, which treaties he brought with him on his return home. He also negotiated a treaty of commerce with Honduras; and in each of these treaties it is recited that he had full powers for the purpose. He had no such powers, and the whole proceeding on his part with reference to those states was not only unauthorized by instructions, but in opposition to those he had received from my predecessor and after the date of his letter of recall and the appointment of his successor. But I have no evidence that Mr. Hise, whose letter of recall (a copy of which is herewith submitted) bears date of May 2, 1849, had received that letter on June 21, when he negotiated the treaty with Nicaragua. The difficulty of communicating with him was so great that I have reason to believe he had not received it. He did not acknowledge it.

The twelfth article of the treaty negotiated by Mr. Hise in effect guarantees the perfect independence of the state of Nicaragua and her sovereignty over her alleged limits from the Caribbean Sea to the Pacific Ocean, pledging the naval and military power of the United States to support it. This treaty authorizes the chartering of a corporation by this government to cut a canal outside of the limits of the United States, and gives

to us the exclusive right to fortify and command it. I have not approved it, nor have I now submitted it for ratification; not merely because of the facts already mentioned, but because on Dec. 31 last Señor Edwardo Carcache, on being accredited to this government as *chargé d'affaires* from the state of Nicaragua in a note to the Secretary of State, a translation of which is herewith sent, declared that he was "only empowered to exchange ratifications of the treaty concluded with Mr. Squier, and that the special convention concluded at Guatemala by Mr. Hise, the *chargé d'affaires* of the United States, and Señor Selva, the commissioner of Nicaragua, had been, as was publicly and universally known, disapproved by his government."

We have no precedent in our history to justify such a treaty as that negotiated by Mr. Hise since the guarantees we gave to France of her American possessions. The treaty negotiated with New Granada on Dec. 12, 1846, did not guarantee the sovereignty of New Granada on the whole of her territory, but only over "the single province of the isthmus of Panama," immediately adjoining the line of the railroad, the neutrality of which was deemed necessary by the President and Senate to the construction and security of the work.

The thirty-fifth article of the treaty with Nicaragua negotiated by Mr. Squier, which is submitted for your advice in regard to its ratification, distinctly recognizes the rights of sovereignty and property which the state of Nicaragua possesses in and over the line of the canal therein provided for. If the Senate doubt on that subject, it will be clearly wrong to involve us in a controversy with England by adopting the treaty; but after the best consideration which I have been able to give to the subject, my own judgment is convinced that the claims of Nicaragua are just, and that as our commerce and intercourse with the Pacific require the opening of this communication from ocean to ocean, it is our duty to ourselves to assert their justice.

This treaty is not intended to secure to the United States any monopoly or exclusive advantage in the use of the canal. Its object is to guarantee protection to

TAYLOR, ZACHARY

American citizens and others who shall construct the canal, and to defend it when completed against unjust confiscations or obstructions, and to deny the advantages of navigation through it to those nations only which shall refuse to enter into the same guarantees. A copy of the contract of the canal company is herewith transmitted, from which, as well as from the treaty, it will be perceived that the same benefits are offered to all nations in the same terms.

The message of my predecessor to the Senate of Feb. 10, 1847, transmitting for ratification the treaty with New Granada, contains in general the principles by which I have been actuated in directing the negotiation with Nicaragua. The only difference between the two cases consists in this: In that of Nicaragua the British government has seized upon part of her territory, and was in possession of it when we negotiated the treaty with her. But that possession was taken after our occupation of California, when the effect of it was to obstruct or control the most eligible route for a ship communication to the territories acquired by us on the Pacific. In the case of New Granada, her possession was undisturbed at the time of the treaty, though the British possession in the right of the Mosquito King was then extended into the territories claimed by New Granada as far as Boca del Toro. The professed objects of both the treaties are to open communications across the isthmus to all nations and to invite their guarantees on the same terms. Neither of them proposes to guarantee territory to a foreign nation in which the United States will not have a common interest with that nation. Neither of them constitutes an alliance for any political object, but for a purely commercial purpose, in which all the navigating nations of the world have a common interest. Nicaragua, like New Granada, is a power which will not excite the jealousy of any nation.

As there is nothing narrow, selfish, illiberal, or exclusive in the views of the United States as set forth in this treaty, as it is indispensable to the successful completion of the contemplated canal to secure protection to it from the local authorities and this government, and as I

have no doubt that the British pretension to the port of San Juan in right of the Mosquito King is without just foundation in any public law ever before recognized in any other instance by Americans or Englishmen as applicable to Indian titles on this continent, I shall ratify this treaty in case the Senate shall advise that course. Its principal defect is taken from the treaty with New Granada, the negotiator having made it liable to be abrogated on notice after twenty years. Both treaties should have been perpetual or limited only by the duration of the improvements they were intended to protect. The instructions to our *chargé d'affaires*, it will be seen, prescribe no limitation for the continuance of the treaty with Nicaragua. Should the Senate approve of the principle of the treaty, an amendment in this respect is deemed advisable; and it will be well to invite by another amendment the protection of other nations, by expressly offering them in the treaty what is now offered by implication only—the same advantages which we propose for ourselves on the same conditions upon which we shall have acquired them. The policy of this treaty is not novel, nor does it originate from any suggestion either of my immediate predecessor or myself. On March 3, 1835, the following resolution, referred to by the late President in his message to the Senate relative to the treaty with New Granada, was adopted in executive session by the Senate without division:

“Resolved, that the President of the United States be respectfully requested to consider the expediency of opening negotiations with the governments of Central America and New Granada for the purpose of effectually protecting by suitable treaty stipulations with them, such individuals or companies as may undertake to open a communication between the Atlantic and Pacific oceans by the construction of a ship-canal across the isthmus which connects North and South America, and of securing forever by such stipulations the free and equal rights of navigating such a canal to all such nations on the payment of such reasonable tolls as may be established to compensate the capitalists who may engage in such undertaking and complete the work.”

TAYLOR, ZACHARY

President Jackson accorded with the policy suggested in this resolution, and in pursuance of it sent Charles Biddle as agent to negotiate with the governments of Central America and New Granada. The result is fully set forth in the report of a select committee of the House of Representatives of Feb. 20, 1849, upon a joint resolution of Congress to authorize the survey of certain routes for a canal or railroad between the Atlantic and Pacific oceans. The policy indicated in the resolution of March 3, 1835, then adopted by the President and Senate, is that now proposed for the consideration and sanction of the Senate. So far as my knowledge extends, such has ever been the liberal policy of the leading statesmen of this country, and by no one has it been more earnestly recommended than by my lamented predecessor.

Status of California, New Mexico, and Texas.—On June, 23, 1850, President Taylor transmitted to the Congress the following special message concerning complications that had arisen in newly acquired territory:

WASHINGTON, Jan. 23, 1850.

To the Senate of the United States,—I transmit to the Senate, in answer to a resolution of that body passed on the 17th inst., the accompanying reports of heads of departments, which contain all the official information in the possession of the Executive asked for by the resolution.

On coming into office I found the military commandant of the Department of California exercising the functions of civil governor in that Territory, and left, as I was, to act under the treaty of Guadalupe-Hidalgo, without the aid of any legislative provision establishing a government in that Territory, I thought it best not to disturb that arrangement, made under my predecessor, until Congress should take some action on that subject. I, therefore, did not interfere with the powers of the military commandant, who continued to exercise the functions of civil governor as before; but I made no such appointment, conferred no such authority, and have allowed no increased compensation to the commandant for his services.

With a view to the faithful execution of the treaty so far as lay in the power of the executive, and to enable Congress to act at the present session with as full knowledge and as little difficulty as possible on all matters of interest in these Territories, I sent the Hon. Thomas Butler King as bearer of despatches to California, and certain officers to California and New Mexico, whose duties are particularly defined in the accompanying letters of instruction addressed to them severally by the proper departments.

I did not hesitate to express to the people of those Territories my desire that each Territory should, if prepared to comply with the requisitions of the Constitution of the United States, form a plan of a State constitution and submit the same to Congress with a prayer for admission into the Union as a State, but I did not anticipate, suggest, or authorize the establishment of any such government without the assent of Congress, nor did I authorize any government agent or officer to interfere with or exercise any influence or control over the election of delegates or over any convention in making or modifying their domestic institutions, or any of the provisions of their proposed constitution. On the contrary, the instructions given by my orders were that all measures of domestic policy adopted by the people of California must originate solely with themselves; that while the executive of the United States was desirous to protect them in the formation of any government republican in its character, to be at the proper time submitted to Congress, yet it was to be distinctly understood that the plan of such a government must at the same time be the result of their own deliberate choice, and originate with themselves, without the interference of the executive.

I am unable to give any information as to laws passed by any supposed government in California or of any census taken in either of the Territories mentioned in the resolution, as I have no information on those subjects.

As already stated, I have not disturbed the arrangements which I found had existed under my predecessor.

In advising an early application by

TAYLOR, ZACHARY

the people of these Territories for admission as States, I was actuated principally by an earnest desire to afford to the wisdom and patriotism of Congress the opportunity of avoiding occasions of bitter and angry dissensions among the people of the United States.

Under the Constitution every State has the right of establishing and from time to time altering its municipal laws and domestic institutions independently of every other State and the general government, subject only to the prohibitions and guarantees expressly set forth in the Constitution of the United States. The subjects thus left exclusively to the respective States were not designed or expected to become topics of national agitation. Still, as under the Constitution Congress has power to make all needful rules and regulations respecting the Territories of the United States, every new acquisition of territory has led to discussions on the question whether the system of involuntary servitude which prevails in many of the States should or should not be prohibited in that Territory. The periods of excitement from this cause which have heretofore occurred have been safely passed, but during the interval, of whatever length which may elapse before the admission of the Territories ceded by Mexico as States, it appears probable that similar excitement will prevail to an undue extent.

Under these circumstances, I thought, and still think, that it was my duty to endeavor to put it in the power of Congress, by the admission of California and New Mexico as States, to remove all occasions for the unnecessary agitation of the public mind.

It is understood that the people of the western part of California have formed a plan of a State constitution, and will soon submit the same to the judgment of Congress, and apply for admission as a State. This course on their part, though in accordance with, was not adopted exclusively in consequence of any expression of my wishes, inasmuch as measures tending to this end had been promoted by the officers sent there by my predecessor, and were already in active progress of execution before any communication from me reached California. If the proposed con-

stitution shall, when submitted to Congress, be found to be in compliance with the requisitions of the Constitution of the United States, I earnestly recommend that it may receive the sanction of Congress.

The part of California not included in the proposed State of that name is believed to be uninhabited, except in a settlement of our countrymen in the vicinity of Salt Lake.

A claim has been advanced by the State of Texas to a very large portion of the most populous district of the Territory commonly designated by the name of New Mexico. If the people of New Mexico had formed a plan of a State government for that Territory as ceded by the treaty of Guadalupe-Hidalgo, and had been admitted by Congress as a State, our Constitution would have afforded the means of obtaining an adjustment of the question of boundary with Texas by a judicial decision. At present, however, no judicial tribunal has the power of deciding that question, and it remains for Congress to devise some mode for its adjustment. Meanwhile I submit to Congress the question whether it would be expedient before such adjustment to establish a Territorial government, which, by including the district so claimed, would practically decide the question adversely to the State of Texas, or by excluding it would decide it in her favor. In my opinion such a course would not be expedient, especially as the people of this Territory still enjoy the benefit and protection of their municipal laws originally derived from Mexico, and have a military force stationed there to protect them against the Indians. It is undoubtedly true that the property, lives, liberties, and religion of the people of New Mexico are better protected than they ever were before the treaty of cession.

Should Congress, when California shall present herself for incorporation into the Union, annex a condition to her admission as a State affecting her domestic institutions contrary to the wishes of her people, and even compel her temporarily to comply with it, yet the State could change her constitution at any time after admission when to her it should seem expedient. Any attempt to deny to the people of the State the right of self-

TAYLOR—TEA IN POLITICS

government in a matter which peculiarly affects themselves will infallibly be regarded by them as an invasion of their rights, and, upon the principles laid down in our own Declaration of Independence, they will certainly be sustained by the great mass of the American people. To assert that they are a conquered people and must as a State submit to the will of their conquerors in this regard will meet with no cordial response among American freemen. Great numbers of them are native citizens of the United States, not inferior to the rest of our countrymen in intelligence and patriotism, and no language of menace to restrain them in the exercise of an undoubted right, substantially guaranteed to them by the treaty of cession itself, shall ever be uttered by me or encouraged and sustained by persons acting under my authority. It is to be expected that in the residue of the territory ceded to us by Mexico the people residing there will at the time of their incorporation into the Union as a State settle all questions of domestic policy to suit themselves.

No material inconvenience will result from the want for a short period of a government established by Congress over the part of the territory which lies eastward of the new State of California; and the reasons for my opinion that New Mexico will at no very distant period ask for admission into the Union are founded on unofficial information which, I suppose, is common to all who have cared to make inquiries on that subject.

Seeing, then, that the question which now excites such painful sensations in the country will in the end certainly be settled by the silent effect of causes independent of the action of Congress, I again submit to your wisdom the policy recommended in my annual message of awaiting the salutary operation of those causes, believing that we shall thus avoid the creation of geographical parties, and secure the harmony of feeling so necessary to the beneficial action of our political system. Connected, as the Union is, with the remembrance of past happiness, the sense of present blessings, and the hope of future peace and prosperity, every dictate of wisdom, every feeling of duty, and every emotion of patriotism tend to in-

spire fidelity and devotion to it, and admonish us cautiously to avoid any necessary controversy which can either endanger it or impair its strength, the chief element of which is to be found in the regard and affection of the people for each other.

Tazewell, LITTLETON WALLER, legislator; born in Williamsburg, Va., Dec. 17, 1774; graduated at William and Mary College in 1792; admitted to the bar in 1796; member of Congress in 1800-2; member of the commission to treat with Spain for the purchase of Florida in 1819; member of the United States Senate in 1824-33; and was chosen governor of Virginia in 1834. In 1840 he was the candidate for the Vice-Presidency on the ticket with James G. Birney. He died in Norfolk, Va., March 6, 1860.

Tea. The tea-plant, which played such a conspicuous part in American history just previous to the Revolutionary War, was brought to Europe by the Dutch East India Company, and first appeared in Holland. It was nearly 100 years before the exports were very large or its use became extensive in England and in the English-American colonies. As early as 1770 the cultivation of the tea-plant was undertaken in Georgia, and from time to time the attempt has been renewed. The imports of tea into the United States in the year ending June 30, 1910, aggregated 85,626,370 lbs., valued at \$13,671,964.

Tea in Politics. Among other articles imported into the colonies upon which a duty was laid, in 1767, was tea, the furnishing of which, for England and her colonies, was a monopoly of the East India Company. In consequence of the violent manifestation of opposition to this method of taxation, and especially of the serious effects upon British trade by the operations of the non-importation league, Lord North, then prime minister, offered a bill in Parliament, in the spring of 1770, for the repeal of the duties upon every article enumerated, excepting tea. He thought, unwisely, that tea, being a luxury, the colonists would not object to paying the very small duty imposed upon it, and he retained that simply as a standing assertion of the right of Parliament to tax the colonists. It was a fatal

TEA IN POLITICS

mistake. The bill became a law April 2, 1770. The minister mistook the character and temper of the Americans. It was not the petty amount of duties imposed, for none of this species of taxation was burdensome; it was the principle involved, which lay at the foundation of their liberties. They regarded the imposition of ever so small a duty upon one article as much a violation of their sacred rights as if a heavy duty on tea was imposed. The ministry would not yield the point, and a series of troubles followed. Merchants in Boston, New York, Philadelphia, Annapolis, and other places agreed not to import tea, and there were combinations against its use in various places. Before North introduced his repeal bill into Parliament the mistresses of 300 families in Boston subscribed to a league, Feb. 9, 1770, binding themselves not to drink any tea until the revenue act should be repealed. Three days afterwards (Feb. 12) the young maidens followed the example of the matrons, and multitudes signed the following document: "We, the daughters of those patriots who have, and do now, appear for the public interest, and in that principally regard their posterity—as such, do with pleasure engage with them in denying ourselves the drinking of foreign tea, in hopes to frustrate a plan which tends to deprive a whole community of all that is valuable in life." Violators of the non-importation agreements were sometimes handled roughly. A Boston merchant, Theophilus Lillie, of Tory tendencies, continued to sell tea openly, which excited popular indignation. A company of half-grown boys placed an effigy near his door with a finger upon it, pointing towards his store. While a man was attempting to remove it, he was pelted with dirt and stones. Running into the store, he seized a gun, and discharged its contents among the crowd. A boy named Snyder was killed, and a lad named Samuel Gore was wounded. The affair produced intense excitement, not only in Boston, but throughout the colonies. The funeral of Snyder was a most impressive pageant. His coffin, inscribed "Innocence itself is not safe," was borne to Liberty Tree, where an immense concourse were assembled, who thence followed the remains to the grave.

Six of Snyder's school-mates bore the coffin, and nearly 500 school-boys led the procession. The bells of Boston were tolled; so, also, were those of the neighboring towns.

By smuggling, non-importation, and non-consumption agreements, the tax on tea, retained for the purpose of vindicating the authority of Parliament, was virtually nullified at the opening of 1773. Then a new thought upon taxation occurred to Lord North. The East India Company severely felt the effects of these causes, and requested the government to take off the duty of 3*d.* a pound on their tea levied in America. Already 17,000,000 lbs. had accumulated in their warehouses in England, and they offered to allow the government to retain 6*d.* upon the pound as an exportation tariff if they would take off the 3*d.* duty. Here was an opportunity for conciliation; but the ministry, deluded by false views of national honor, would not accede to the proposition, but stupidly favored the East India Company, and utterly neglected the principles and feelings of the Americans. They proposed a bill for the exportation of tea to America on their own account, without paying export duty, and it passed May 10, 1773. Agents and consignees were appointed in the several colonies to receive the tea, and the ministry congratulated themselves with outwitting the patriots. This movement perfected the nullification of the tea tax, for universal opposition to its use was manifested.

Those who accepted the office of consignees of the tea cargoes of the East India Company were held in equal disrepute with the stamp-distributers. They were requested to refrain from receiving the proscribed article. The request of a public meeting in Philadelphia, Oct. 2, 1773, that Messrs. Wharton should not act, was complied with, and their answer was received with shouts of applause. Another firm refused, and they were greeted with groans and hisses. A public meeting in Boston (Nov. 5) appointed a committee to wait upon the consignees in that town and request them to resign. These consignees were all friends of Governor Hutchinson—two of them were his sons and a third his nephew. They had been summoned to attend a meeting of the

TEA IN POLITICS—TECHNOLOGY

Sons of Liberty (under Liberty Tree) and resign their appointments. They contemptuously refused to comply; now, in the presence of the town committee, they so equivocated that the meeting voted their answer "unsatisfactory and daringly affrontive." Another committee was appointed for the same purpose at a meeting on the 18th, when the consignees replied: "It is out of our power to comply with the request of the town." The meeting broke up with ominous silence. The consignees became alarmed and asked leave to resign their appointments into the hands of the governor and council. The prayer was refused, and the consignees fled to the protection of the castle. At a meeting held first in Faneuil Hall and then in the South Meeting-house (Nov. 29), a letter was received from the consignees, offering to store the tea until they could write to England and receive instructions. The offer was rejected with disdain. The sheriff then read a proclamation from the governor, ordering the meeting to disperse. It was received with hisses. Then the meeting ordered that two tea-vessels hourly expected at Boston should be moored at Griffin's Wharf. At the demand of a popular meeting in New York (Nov. 25) the appointed consignees there declined to act, whereupon Governor Tryon issued an order for the cargo of any tea-ship that might arrive to be deposited in the barracks.

When news reached America that tea-ships were loading for colonial ports, the patriots took measures for preventing the unloading of their cargoes here. The Philadelphians moved first in the matter. At a public meeting held Oct. 2, 1773, in eight resolutions the people protested against taxation by Parliament, and denounced as "an enemy to his country" whoever should "aid or abet in unloading, receiving, or vending the tea." A town-meeting was held in Boston (Nov. 5), at which John Hancock presided, which adopted the Philadelphia resolutions, with a supplement concerning remissness in observing non-importation and non-consumption agreements, but insisting upon a strict compliance with them in the future. A tea-vessel, bound for Philadelphia, was stopped (Dec. 25) 4 miles below that city, information having been received of the

destruction of the tea in Boston. Another, driven by stress of weather to the West Indies, did not arrive at New York for several months afterwards. When it arrived (April 21, 1774) at Sandy Hook, the pilots, under instructions from the city committee, refused to bring her up, and a committee of vigilance soon took possession of her. When the captain was brought to town he was ordered to take back his ship and cargo. The consignees refused to interfere; and meanwhile another ship, commanded by a New York captain, was allowed to enter the harbor, on the assurance that she had no tea on board. A report soon spread that she had tea on board, and the captain was compelled to acknowledge that he had eighteen chests, belonging to private parties, and not to the East India Company. The indignant people poured the tea into the harbor, and the captain of the East India tea-ship—with grand parade, a band of music playing "God save the King," the city bells ringing, and colors flying from liberty-poles—was escorted from the custom-house to a pilot-boat, which took him to his vessel at the Hook, when, under the direction of the vigilance committee, the vessel was started for England. A tea-ship (the *Dartmouth*) arrived at Boston late in November, 1773, and was ordered by a town-meeting (Nov. 29) to be moored at Griffin's Wharf. It was voted by the same meeting that the "owner be directed not to enter the tea-ship at his peril"; and the captain was warned not to suffer any of the tea to be landed. Two other tea-ships that arrived there were served in the same way, and suffered outrage. A fourth tea-vessel, bound for Boston, was wrecked on Cape Cod, and a few chests of her tea, saved, were placed in the castle by the governor's orders. About twenty chests brought in another vessel, on private account, were seized and cast into the water. In Charleston a cargo was landed, but, being stored in damp cellars, was spoiled. See BOSTON TEA PARTY.

Technology, INSTITUTES OF, a noteworthy feature of the educational progress in the United States in recent years is the great attention that is being paid to the education of the young in technical lines. The institutes of technology are institutions wholly distinct from the agri-

TECUMSEH

cultural and mechanical colleges that have been established in the various States and Territories under provisions of two acts of Congress. The latter, while providing special instruction in agriculture, also give courses to a limited extent in manual training. Technical institutes also differ from what are known as manual training-schools, the latter affording instruction in a few branches of industry dependent on hand work. The usual course in the purely technical institutions includes civil, mechanical, mining and electrical engineering, foundry work, model-making, wood and metal turning, and mechanical drawing, in addition to the French and German languages, chemistry, and other necessities for a professional technical career. Within a few years the curriculum in manual-training schools has been greatly extended, technical high schools have sprung up in nearly all of our large cities, distinctive vocational schools have been established as a branch of municipal educational systems, and great railroad corporations and many large manufacturing concerns are maintaining schools for educating youth for skilled work in their respective establishments. Specialized training is a conspicuous feature of the American educational system of the day. An efficient recipient of such training is seldom out of employment. See **MANUAL AND INDUSTRIAL TRAINING.**

Tecumseh, an Indian warrior, chief of the Shawnees; born in Old Piqua, near Springfield, O., about 1768; was one of the boldest and most active of the braves who opposed Wayne (1794-95), and was at the treaty of Greenville. As early as 1804 he had begun the execution of a scheme, in connection with his brother, "The Prophet," for confederating the Western Indians for the purpose of exterminating the white people. He made use of the popularity of his brother as a prophet or medicine-man, whose influence had been very great over large portions of the Delawares, Shawnees, Wyandottes, Miamis, Ottawas, Pottawatomies, Kickapoos, Winnebagoes, and Chippewas. It was among the more remote tribes that a greater part of his converts were obtained. In the summer of 1808 the Prophet removed his village to Tippecanoe Creek (a

northern branch of the upper Wabash), among the Delawares and Miamis. There throughout 1809 the Prophet attracted large numbers of Indians, when military exercises were interspersed with religious mummeries and warlike sports. These military exercises, and an alleged secret intercourse of the brothers with the British traders and agents, had drawn

TECUMSEH.

upon the Prophet and his brother the suspicions of Harrison, the governor of the Indian Territory and superintendent of Indian affairs. With consummate duplicity, the Prophet, visiting Harrison at Vincennes, allayed his suspicions by assuming to be a warm friend of peace, his sole object being to reform the Indians and to put a stop to their use of whiskey. Not long afterwards, a treaty made with several tribes by Harrison was denounced by Tecumseh, and serious threats were made by him. Harrison invited the brothers to an interview at Vincennes (August, 1810), when the latter appeared with many followers and showed so much hostility that the governor ordered him and his people to quit the neighborhood.

Tecumseh went among the Seminoles in Florida, the Creeks in Alabama and Georgia, and tribes in Missouri in the

TECUMSEH

spring of 1811, trying to induce them to join his confederacy. He went on a similar mission in the autumn, taking with him his brother, the Prophet, partly to employ him as a cunning instrument in managing the superstitious Indians, and partly to prevent his doing mischief at home in Tecumseh's absence. About thirty warriors accompanied them. His mission, then, was to engage the Indians as allies for the British and against the Americans. The Choctaws and Chickasaws, through whose country Tecumseh passed, would not listen to him; but the Seminoles and Creeks lent him willing ears. He addressed the assembled Creeks for the first time in the lower part of (the present) Autauga county, Ala., late in October. Soon afterwards, having addressed the Creeks at different points, he approached a great council called by Colonel Hawkins, United States Indian agent, at Toockabatcha, the ancient Creek capital, where fully 5,000 of the nation were gathered. Tecumseh marched with dignity into the square with his train of thirty followers, entirely naked, excepting their flaps and ornaments, their faces painted black, their heads adorned with eagles' feathers, while buffalo tails dragged behind, suspended by bands around their waists. Like appendages were attached to their arms, and their whole appearance was as hideous as possible, and their bearing uncommonly pompous and ceremonious. They marched round and round in the square, and then, approaching the Creek chiefs, gave them the Indian salutation of a hand-shake at arm's-length and exchanged tobacco in token of friendship. So they made their appearance each day until Hawkins departed.

That night a council was held in the great round-house. It was packed with eager listeners. Tecumseh made a fiery and vengeful speech, exhorting the Creeks to abandon the customs of the pale faces and return to those of their fathers; to cast away the plough and loom and cease the cultivation of the soil, for it was an unworthy pursuit for noble hunters and warriors. He warned them that the Americans were seeking to exterminate them and possess their country; and told them that their friends, the British, had sent him from the Great Lakes to invite them

to the war-path. The wily Prophet, who had been told by the British when a comet would appear, told the excited multitude that they would see the arm of Tecumseh, like pale fire, stretched out in the vault of heaven at a certain time, and thus they would know by that sign when to begin the war. The people looked upon him with awe, for the fame of Tecumseh and the Prophet had preceded them. Tecumseh continued his mission with success, but found opponents here and there. Among the most conspicuous of them was Tustinuggee-Thlucco, the "Big Warrior." Tecumseh tried every art to convert him to his purposes. At length he said, angrily: "Tustinuggee-Thlucco, your blood is white. You have taken my redsticks and my talk, but you do not mean to fight. I know the reason; you do not believe the Great Spirit has sent me. You shall believe it. I will leave directly and go straight to Detroit. When I get there, I will stamp my foot upon the ground and shake down every house in Toockabatcha."

Strangely enough, at about the time Tecumseh must have arrived at Detroit, there was heard a deep rumbling underground all over the Alabama region, and there was a heaving of the earth that made the houses of Toockabatcha reel and totter as if about to fall. The startled savages ran out, exclaiming: "Tecumseh is at Detroit! Tecumseh is at Detroit! We feel the stamp of his foot!" It was the shock of an earthquake that was felt all over the Gulf region in December, 1812. At the same time the comet—the blazing arm of Tecumseh—appeared in the sky. These events made a powerful impression on nearly the whole Creek nation, but it did not move the "Big Warrior" from his allegiance to the United States. The Creeks rose in arms, and in less than two years their nation was ruined.

In the War of 1812-15 Tecumseh was the active ally of the British, and received the commission of brigadier-general in the British army. Assisting General Proctor in the battle of the Thames, he was slain there, Oct. 5, 1813. Who killed Tecumseh? was an unsettled, and, at one time, exciting question. It was supposed, at the time of the battle on the Thames, that he was slain by the pistol of Col

TEEDYUSCUNG—TEHUANTEPEC SHIP RAILWAY

Richard M. Johnson. Indeed, the friends of Colonel Johnson asserted it positively as an undoubted fact; and during the political campaign when he was a candidate for the Vice-Presidency of the United States, the question caused much warm discussion. That he killed an Indian under circumstances which were warranted was never denied. Two Indian warriors lay dead upon the spot after the battle, one of whom was believed to be Tecumseh. They were stripped naked. It has been pretty clearly shown that neither body was that of Tecumseh, for his was carried away by his warriors. The exasperated Kentuckians mutilated the supposed body of Tecumseh, and later Kentuckians have recorded, by a sculpt-

JOHNSON'S MONUMENT.

ure in marble upon Colonel Johnson's monument, in the cemetery at Frankfort, their conviction that he killed the great chief.

Teedyuscung, chief of the Delaware Indians; born near Trenton, N. J., about 1700; removed to the forks of the Delaware in 1730; received Christian baptism and the name Gideon from Bishop Cammerhoff, a Moravian missionary, in 1750.

He deserted the Moravians in 1754, and led the Delawares and their allies who resided within the WALKING PURCHASE (*q. v.*), Wyoming Valley. In November, 1757, a treaty of pacification was concluded with Teedyuscung at Easton, Pa., and in the following year a town was laid out in Wyoming Valley for him and his tribe. His house was set afire by an enemy while he was asleep, and he was burned to death, April 16, 1763.

Teganakoa, STEPHEN, Indian convert; went with his family to the mission of Sault St. Louis, where they were baptized. In the fall of 1790, while on a hunting expedition with his wife and another Indian, he was taken prisoner by a band of Cayugas and carried to Onondaga, N. Y. One of the party said to him that he owed his death to having left his countrymen for the "dogs of Christians at the Sault." He answered: "Do what you will with me, I fear neither your outrages nor your fires. I willingly give my life for a God who shed his blood for me." He was then slowly tortured to death, enduring his agony with fortitude and praying for his torturers.

Teganissorens, an Iroquois Indian chief; born in Onondaga, N. Y.; became a strong ally of the French; was converted to Christianity in 1693; and in the following year visited Frontenac, the French governor, to whom he proposed the rehabilitation of Fort Catarocouy (Kingston), which appeared to Frontenac as a wise policy. He accordingly raised an expedition to carry out the plan which he was soon forced to abandon, owing to orders received from the French Court. Later Teganissorens received both English and French agents, to whom he declared that he would remain neutral, and thereafter strongly protested against attacks on the English settlers. In 1711 he gave information to the French that preparations were being made in New York, Boston, and Albany for the invasion of Canada. He died in Caughnawaga, or Sault St. Louis, after 1711.

Tehuantepec Ship Railway. Early in 1881 Capt. James B. Eads, who had won considerable reputation as an engineer in building the great bridge over the Mississippi at St. Louis, and also in constructing the system of jetties at the mouth of

TEHUANTEPEC SHIP RAILWAY—TELEPHONE

that river, obtained from the Mexican government the right to build a ship railway across the isthmus of Tehuantepec. That government also promised him a large grant of money and land, and he immediately made application to Congress for further aid to secure the carrying-out of the plan. The matter was referred in the House of Representatives to a committee, and this body, Feb. 12, 1881, made report endorsing the project, and recommending the passage of a bill pledging the protection of the United States to the railway company and guaranteeing the interest on \$50,000,000 of its bonds. This report, however, was laid upon the table by an overwhelming vote, and thus for the time being the consideration of the merits of the project was prevented.

Captain Eads estimated the cost of the railway over the Tehuantepec route, 112 miles in length, at \$75,000,000. He claimed that wherever a canal could be built a strong railway for the transportation of ships could be built for half the cost of the canal. He selected the Tehuantepec in preference to the Panama route.

In the fall of 1881, and in 1882, a corps of engineers were employed in surveying this route. However, all Captain Eads obtained from the Forty-sixth or the two subsequent congresses was favorable committee reports. When he was altogether worn out with the struggle to obtain due recognition for his scheme, the Forty-ninth Congress partially consented to incorporate his company. A bill was passed by the Senate Feb. 17, 1887, which constituted James B. Eads and some eighty other persons named as a body politic under the name and title of the Atlantic and Pacific Ship Railway Company. The stock was not to exceed \$100,000,000, and when 10 per cent. of the stock had been subscribed for and 10 per cent. thereon paid in cash, a meeting of stockholders was to be held in Washington or New York for the election of directors. If \$10,000,000 of stock was not subscribed for and 10 per cent. in cash paid thereon within two years, the charter—so the bill declared—must expire by limitation. This bill did not get through the House, however, being lost in the rush

of legislation before adjournment, and as Captain Eads died March 8 following, nothing was accomplished with his scheme.

Telegraph. A telegraph on an improved plan was invented by Jonathan Grant, of Belchertown, Mass., as early as 1799. The inventor set up one of his lines between Boston and Martha's Vineyard, places 90 miles apart, at which distance he asked a question and received an answer in less than ten minutes. Until the perfecting of the electro-magnetic telegraph by Professor Morse in 1844, telegraphy was carried on by means of contrivances visible to the eye. In 1846 three men conducted the entire telegraph business in the United States from a dingy basement in New York City.

In 1911 the telegraph business of the United States was handled by the Western Union, the Commercial Cable, and the Postal Telegraph companies. The first reported 214,360 miles of poles and cables, 1,429,049 miles of wires, 24,825 offices, and 75,135,405 messages handled in a year. The second company carries on a foreign business; and the third, a foreign and also some domestic business, operating 62,223 miles of poles, 374,666 miles of wire, and 31,715 offices. See also CABLES; WIRELESS TELEGRAPHY.

Company in opposition to the American Bell Telephone Co., organized.....

1901

In 1910 the total number of telephones in the United States operated under the Bell system was 5,142,692, of which 3,588,247 belonged to associated companies and 1,554,445 to connecting companies. The associated companies of the Bell system had 104,956 employes, 10,480,026 miles of wire, and a record of 20,442,535 daily conversations. The system had property valued at \$612,600,000; capital stock and floating and funded debts, \$581,300,000; and surplus of liquid assets, \$57,200,000.

Telescope. Telescopes were first constructed in the Netherlands about 1608. In 1853 Alvan Clark, of Cambridgeport, Mass., a comparatively unknown portrait-

painter, after having experimented from 1846 in grinding lenses, succeeded in turning out a glass superior to any made elsewhere in the world. He and his sons went on making larger and larger instruments, till they ground the 36-inch telescope for the Lick Observatory, in California, and the son, Alvan G., made the 40-inch Yerkes telescope for the observatory of the University of Chicago, erected at Williams Bay, Wis. The movable part of the latter weighs about 12 tons, and the clock weighs 1½ tons. The refracting telescopes of the Naval Observatory, at Washington, 33 feet long, and at the Leander McCormick Observatory, University of Virginia, both made by Alvan Clark & Sons, have a 26-inch aperture. The largest reflecting telescope in the United States is at Harvard University, 28-inch mirror. Other notable telescopes are at Princeton University (Clark, 23-inch); Rochester, N. Y. (Clark, 16-inch); Madison, Wis. (Clark, 15.5-inch); Dudley, at Albany, N. Y. (Fitz, 13-inch); University of Michigan (Fitz, 12.5-inch); and Middletown University (Clark, 12-inch).

Telfair, EDWARD, patriot; born in Scotland in 1735; came to America in 1758 as agent for a mercantile house; resided first in Virginia, then in North Carolina, and finally settled as a merchant in Savannah in 1766. An active patriot there, he was on the revolutionary committees, and was one of a party which broke open the magazine at Savannah and removed the gunpowder in 1775. He served in the Continental Congress in 1778, 1780-83, and in 1786 and 1790-93 he was governor of Georgia. He died in Savannah, Ga., Sept. 17, 1807.

Teller, HENRY MOORE, legislator; born in Granger, N. Y., May 23, 1830; educated at Alfred University, N. Y.; admitted to the bar in 1858; settled in Colorado in 1861; major-general of the Colorado militia in 1862-64; Democratic United States Senator in 1876-82; Secretary of the Interior in 1882-85; again a United States Senator in 1885-1909. He was re-elected in 1891 as a Republican, but in 1896 withdrew from the National Republican Convention on account of its financial policy; and was returned to the Senate in 1897 as an independent Silver Republican.

TEMPERANCE REFORM—TEMPERANCE SOCIETIES

Temperance Reform. Maurice, the landgrave of Hesse, founded an order of temperance, Dec. 25, 1600; a total-abstinence society existed at Skibbereen, Ireland, in 1817; the Sober Society was formed at Allentown, N. J., in 1805, and this was followed by temperance societies organized, one at Moreau, Saratoga co., N. Y., April 30, 1808; another at Greenfield, N. Y., in 1809; and another at Hector, N. Y., April 3, 1818. The Massachusetts Society for the Suppression of Intemperance was instituted at Boston, Feb. 5, 1813; but temperance reform as an organized movement began Feb. 13, 1826, when the American Society for the Promotion of Temperance was organized at the Park Street Church, Boston, Mass. Drs. Justin Edwards, Woods, Jenks, and Wayland, and Messrs. John Tappan and S. V. S. Wilder were prominent in it.

The following is the chronology of the chief events in the temperance movement in America:

First women's temperance society organized in Ohio, close of.....1828

New York State and Connecticut State temperance societies organized.....1829

Congressional Temperance Society organized at Washington, D. C....Feb. 26, 1833

First national temperance convention meets at Philadelphia; 440 delegates from twenty-two States.....May 24-27, 1833

Order of Sons of Temperance organized in New York.....Sept. 29, 1842

John B. Gough signs the pledge at Worcester, Mass.....Oct. 31, 1842

Father Mathew visits the United States; arriving in New York on the *Ashburton*; he is welcomed at the Irving House as the guest of the city.....July 2, 1849

Maine liquor law passed..June 2, 1851

Order of Good Templars formed in New York State.....1851

Father Mathew sails from Philadelphia on the *Pacific* for Ireland after an extended tour throughout the United States Nov. 8, 1851

John B. Gough makes a two years' tour of England, delivering his first address in Exeter Hall, London.....Aug. 2, 1853

World's temperance convention in Metropolitan Hall, N. Y...Sept. 6-10, 1853

Spirit rations in the navy of the United States abolished after.....Sept 1, 1862

National Temperance Society and pub-

lication house, with headquarters at New York, organized.....1865

National Prohibition party organized at Chicago, Ill.....Sept. 1-2, 1869

National Prohibition party nominates James Black (Pa.) for President and John Russell (Mich.) for Vice-President, who receive 5,608 popular votes....1872

Blue-ribbon movement begun by Francis Murphy, of Maine.....1873

Woman's temperance crusade begins in Hillsboro, O.....December, 1873

National Woman's Christian Temperance Union organized..Nov. 18-20, 1874

Women's international temperance congress in Philadelphia, Pa....June 12, 1876

International temperance congress in Philadelphia, Pa.....June 13-14, 1876

Department of scientific temperance in public schools created in connection with the Women's Christian Temperance Union1880

World's Christian Temperance Union organized by Frances E. Willard...1883

John B. Gough dies in Philadelphia Feb. 17, 1886

Law for compulsory temperance education in public schools passed by Congress for District of Columbia and the Territories.....May 17, 1886

Frances E. Willard, president of the Women's Christian Temperance Union, and founder of the World's Christian Temperance Union, dies in New York City Feb. 18, 1898

See PRESIDENTIAL ELECTIONS for Prohibition candidates; PROHIBITION.

Temperance Societies. French traders engaged extensively in the sale of intoxicating liquors to the Indians in Canada. The Jesuit missionaries opposed the traffic with all their power, as it was not only injurious to the Indians, but interfered seriously with the labors of the missionaries. The wealthy traders managed to interest the governor-general in their behalf, also the King's counsel, on the pretext that the traffic was necessary to secure the good-will of the Indians. It was asserted that the evils of it were imaginary or much exaggerated. For once, however, philanthropy triumphed over sordid interest. The Bishop of Quebec went to France in 1678, and obtained a royal decree prohibiting the traffic under heavy penalties.

TEMPLE—TENNESSEE

The first modern temperance society was formed in 1789 by 200 farmers of Litchfield county, Conn., who agreed not to use "any distilled liquor in doing their farm-work the ensuing season." Organized societies of a similar kind began to be formed in 1811, and in 1826 the first public temperance society was organized in the United States. The total-abstinence principle was not adopted until 1836, when a national convention held at Saratoga, N. Y., took that higher stand. The Washingtonian Society, the first formed on total-abstinence principles, was organized in Baltimore in 1840 by six men of intemperate habits who signed a pledge to totally abstain from intoxicating drinks. At the first anniversary of the society more than 1,000 reformed drunkards walked in procession.

Temple, OLIVER PERRY, lawyer; born in Green county, Tenn., Jan. 27, 1820; graduated at Washington College, Tennessee, in 1844, and was admitted to the bar in 1846. He delivered the first speech for the Union made in Tennessee after the first election of Abraham Lincoln; was chancellor of Tennessee in 1866-78; retired from the practice of law in 1881; was postmaster in Knoxville, Tenn., in 1881-85. He was author of *The Covenanters*,

the Cavalier, and the Puritan; East Tennessee and the Civil War; and Union Leaders of East Tennessee. He died in Knoxville, Tenn., in 1907.

Ten Broeck, ABRAHAM, military officer; born in Albany, N. Y., May 13, 1734; became a merchant in 1753; member of the Provincial Congress in 1775; and chairman of the convention that inaugurated the State government in 1776. Soon after the outbreak of the Revolutionary War he was appointed colonel of militia; was made brigadier-general in 1778, and commanded the forces in Ulster and Dutchess counties, and a brigade in the action at Bemis's Heights in October, 1777. He was mayor of Albany in 1779-83. He died in Albany, N. Y., Jan. 10, 1810.

Ten-forties, popular name of the United States five-per-cent. bonds issued in 1864, redeemable in ten, and payable in forty years.

Ten-hour Law. The hours of labor in manufactories formerly varied from twelve to fourteen hours daily. In 1847 England enacted the first ten-hour law. In 1853 some of the American factories introduced an eleven-hour day. This has gradually been reduced to the present standard of eight hours.

TENNESSEE

Tennessee (name of Cherokee Indian origin, applied to several former settlements of that tribe; meaning now lost), a State in the East South Central Division of the North American Union; bounded on the n. by Kentucky and Virginia, e. by North Carolina, s. by Georgia, Alabama, and Mississippi, and w. by Arkansas and Missouri; area, 42,022 square miles, of which 335 are water surface; extreme breadth, e. to w., 430 miles; extreme length, n. to s., 120 miles; number of counties, 96; capital, Nashville; popular name, "the Big Bend State"; State motto, "Agriculture, Commerce"; organized as a Territory, May 26, 1790; admitted into the Union as the sixteenth State, June 1, 1796; proclaimed out of the Union, June 24, 1861; readmitted, July 24, 1866; population (1910), 2,184,789.

General Statistics.—Tennessee is noted for its unique early history; its share in the wars of the Revolution, 1812-15, and secession; its valuable mineral productions, especially coal; its agricultural and manufacturing interests; and for having given the country three Presidents: Jackson, Polk, and Johnson. Its banner year in aggregate value of mineral productions (1906) showed a total of \$27,444,570, of which coal represented \$7,667,415, but the value of the latter was larger in 1908, and the production reached its maximum in 1910—7,121,380 short tons, valued at \$7,925,350. In 1907 the output of pig iron was valued at \$7,542,000; copper, \$3,895,024; and phosphate rock, \$3,047,836. There are over 245,500 farms, comprising 10,875,000 improved acres, and representing a value in lands, buildings, and implements of \$500,866.

TENNESSEE

000, an increase in the value of lands and buildings of 81 per cent. in ten years. Ordinary farm crops have a value of over \$83,000,000; corn (\$53,955,000), hay and forage (\$12,618,000), wheat (\$10,434,000), and tobacco (\$5,665,000) leading.

In the cotton-growing industry the highest single-year production (1910) showed 337,596 bales of fibre, valued at \$23,340,000, and 148,000 long tons of seed, valued at \$4,010,000, making the total value of this crop \$27,350,000. Domestic animals, poultry, and bees have a value of over \$110,554,000—an increase of 81 per cent., also in ten years, horses (\$39,258,000), mules (\$35,060,000), and cattle (\$20,655,000) leading.

Manufacturing industries are represented by 4,609 factory-system establishments, employing \$167,924,000 capital and 73,841 wage-earners; paying \$37,438,000 for salaries and wages and \$104,016,000 for materials; and yielding products valued at \$180,130,000. These figures show an increase in ten years in capital, from \$63,140,657; wage-earners, from 45,963; salaries and wages, from \$17,775,169; cost of materials, from \$54,559,039; and value of products, from \$92,749,129. The principal industries are the manufacture of flour and grist, lumber and timber, furniture, foundry and machine-shop products, steam-railroad cars, books, and periodicals, cotton-seed oil and cake, leather, and various textiles. The internal-revenue collections on taxable manufactures total over \$2,342,000 in a single year. Tennessee has a foreign trade in merchandise, through the ports of delivery of Chattanooga, Knoxville, Memphis, and Nashville, of over \$440,000 per annum—all imports.

General business interests are served by 102 national banks, having \$11,917,724 capital and resources of \$90,846,940; about 317 State banks (267 reporting capital \$9,919,437 and resources \$49,928,298); and thirteen stock savings-banks, with \$744,455 capital and \$11,730,029 resources. The exchanges at the clearing-houses at Memphis (\$313,341,500), Nashville, and Chattanooga aggregate over \$418,754,000 in a single year.

Religious interests are promoted by 8,021 organizations of white congregations, having 7,400 church edifices, 697,570 com-

municants or members, 355,550 Sunday-school scholars, and church property valued at \$14,469,012, the strongest denominations being the Baptist, Methodist, Presbyterian, Disciples, Roman Catholic, and Protestant Episcopal; and by 3,691 organizations of colored congregations, having 1,808 church edifices, 172,867 members, and church property valued at \$2,631,502, the strongest denominations being the Baptist, Methodist, and Presbyterian. The Roman Catholic Church has a bishop at Nashville; the Protestant Episcopal, one at Memphis; the Methodist Episcopal South, two at Nashville; the African Methodist, one at Nashville; and the Colored Methodist Episcopal, one each at Jackson and Nashville.

STATE SEAL OF TENNESSEE.

The school age is 6-21; enrolment in the public schools, white, 411,910; colored, 100,248; average daily attendance, white, 262,369; colored, 83,536; value of public-school property, \$7,738,805; total revenue, \$3,407,837; total expenditure, \$3,404,555; estimated number of pupils in private and parochial schools, 37,124. For higher education there are twenty universities and colleges for men and both sexes; seven colleges for women only; five schools of theology, five of law, eight of medicine, three of dentistry, and four of pharmacy; two manual and industrial training schools; and, for the colored race, twelve secondary schools. The State maintains schools for the deaf and dumb (Knoxville) and the blind (Nashville), and a re-

TENNESSEE

form school at Nashville; and Shelby, Hamilton, and Knox counties have industrial reform schools at Bartlett, East Chattanooga, and Knoxville respectively. The most important universities and colleges are the University of Tennessee, Knoxville; Vanderbilt University (M. E. S.), Nashville; Cumberland University (Presb.), Lebanon; Fisk University (Cong.), Nashville; University of the South (P. E.), Sewanee; Lincoln Memorial University, Cumberland Gap; Southwestern Presbyterian University, Clarks-ville University of Chattanooga (M. E.); Knoxville College (Unit. Presb.); Wal-don University (M. E.), Nashville; Chris-tian Brothers College (R. C.), Memphis; Tennessee College (Bap.) Murfreesboro; and Swift Memorial College (Presb.), Rogersville.

Government.—A constitution was adopt-ed by a convention without submission to popular vote in 1796; another was rati-fied by the people in 1835, and amended in 1853; a majority vote of the State favored acceptance of the provisional government of the Confederate States, East Tennes-see declared its opposition to the Confed-eracy, and Governor Harris proclaimed the State out of the Union, in 1861; con-stitutional amendments abolishing slav-ery and annulling all acts relating to secession were ratified by popular vote in 1865; and a new constitution was sim-ilarly adopted in 1870. The Thirteenth Amendment to the federal Constitution was ratified in 1865, and the Fourteenth in 1866, and the legislature abolished all distinction of race or color in qualifica-tions for electors in 1867. A prohibition constitutional amendment was defeated in 1887, and the Australian-ballot sys-tem adopted in 1889.

The executive authority is vested in a governor (annual salary, \$7,500), sec-retary of State, treasurer, comptroller, at-torney-general, adjutant-general, superin-tendent of public instruction, and commis-sioners of agriculture and insurance—offi-cial terms, two years. The legislature consists of a senate of thirty-three mem-bers and a house of representatives of ninety-nine members—terms of each, two years; salary of each, \$5 per diem; sessions, biennial; limit, none, but mem-bers are paid for seventy-five days only.

The chief judicial authorities are a Court of Appeals of five judges and a Supreme Court, comprising a chief-justice and four associate justices. In 1911 the total bonded debt was \$11,793,766, of which \$335,666 was unfunded bonds held by the federal government, which the State will not redeem till certain of its claims are adjusted between the two governments; assessed valuations for 1910, \$499,702,478, besides \$91,028,024 assessed on railroad, telephone, and telegraph property; tax rate, \$3.50 per \$1,000.

In the apportionment of representation in Congress, Tennessee was given one member under the census of 1790; three in 1800; six in 1810; nine in 1820; thirteen in 1830; eleven in 1840; ten in 1850, 1870, '80, '90, and 1910; and eight in 1880.

History: Early Period.—The present

State of Tennessee was originally a part of North Carolina, and was claimed as a hunting-ground by the Chickasaws, Choctaws, Shawnees, and even by the Six Nations. No tribe made it a fixed habitation excepting the Cherokees, who dwelt in the extreme southeast part. Earl Loudon, governor of Virginia, sent Andrew Lewis thither in 1756 to plant a settlement, and he built Fort Loudon, on the Tennessee River, about 30 miles from the site of Knoxville. It was besieged by Indians in 1760 and captured, the inmates being murdered or reduced to captivity. Armed men from Virginia and North Carolina retook the fort in 1761, and compelled the Indians to sue for peace.

Immigrants from North Carolina, led by James Robinson, settled on the Watauga River, one of the head streams of the Tennessee, in 1768. It was on lands of the Cherokees, from whom the settlers obtained an eight-year lease in 1771. They there organized themselves into a body politic, and adopted a code of laws signed by each adult individual of the colony. Others soon joined them and extended settlements down the valley of the Holston, and over intervening ridges to the Clinch and one or two other streams, while others penetrated Powell Valley and began a settlement in the southwest corner of Virginia. These settlers were known as the "Watauga Association" from 1769 to 1777.

The territory was represented in the North Carolina legislature as the District

CHATTANOOGA, TENNESSEE, IN 1862.

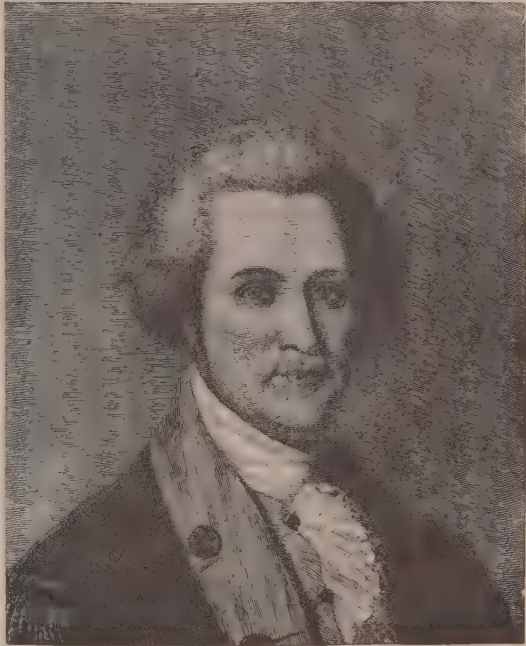

TENNESSEE

of Washington. In 1785 the STATE OF would have been impolitic and hazardous FRANKLAND (*q. v.*) was organized, but to undertake by open force. They went was reunited with North Carolina in mounted, and leading a mare of Sevier's 1788, and the next year that State ceded the territory to the national government.

Under Governor Sevier.—

JOHN SEVIER (*q. v.*), first governor of Frankland, stands out as one of the most prominent and picturesque figures in the early history of Tennessee. He was called "the greatest of Indian fighters," having fought against the savage Creeks, Choc-taws, and Cherokees—the bravest, most warlike, and most blood-thirsty of all the native tribes east of the Mississippi. The settlers were constantly menaced by them, and nothing had saved the stout-hearted pioneers from total extermination except their rude log forts and the sleepless and untiring vigilance of such men as Sevier, whose sterling honesty, captivating manners, and generous public spirit, great personal bravery, and high soldierly qualities had won for him the admiration and affection of every man, woman, and child throughout the wide expanse of the territory.

An incident which well serves to illustrate their devotion to him, as well as a typical phase of the arduous life of those times, is recorded in the story of the trial of Sevier by the State authorities of North Carolina, for high treason and outlawry, and his ingenious and dramatic rescue by a party headed by one of his lieutenants, James Cosby. The trial was in progress at Morganton, and many thousands had come together to witness what was deemed by them the most important political event that had occurred since the proclamation of peace with Great Britain. With three others—Major Evans, and James and John Sevier, the two sons of the general—Cosby proposed to go to the rescue, to effect by stratagem what it

JOHN SEVIER.

which was known as the swiftest-footed animal in the territory. The rescuers halted on the outskirts of Morganton, and, concealing their horses in a clump of underbrush, left them there in charge of the young Seviars. Then Cosby and Evans, disguised as countrymen, entered the town. When they arrived at the court-house, Evans dismounted, and, throwing the bridle loosely over the neck of the animal, stood with her directly before the open door and in plain view of the interior of the building. Then Cosby entered the courtroom, and, elbowing his way up the crowded aisle, halted directly in front of the judge's bench, and only a few feet from where his beloved leader stood encompassed by the court officials. Catching his eye, Cosby, by a significant gesture, directed Sevier's attention to his horse, that

TENNESSEE

WARNING SETTLERS OF THE APPROACH OF INDIANS.

stood impatiently pawing the ground at the door. At one glance, the quick eye of Sevier took in the situation. Seeing that he was understood, Cosby pressed closer to the bench, and in quick, energetic tones said to the judge: "Are you not about done with that man?" The question, and the tone and manner of the speaker, drew all eyes upon him in amazement. For a few moments—as Cosby had intended—all was confusion. Taking instant advantage of this, Sevier sprang from among the officers, and, the crowd parting to the right and left, with two bounds he was upon the back of his horse and in two hours far away in the mountains. He was followed

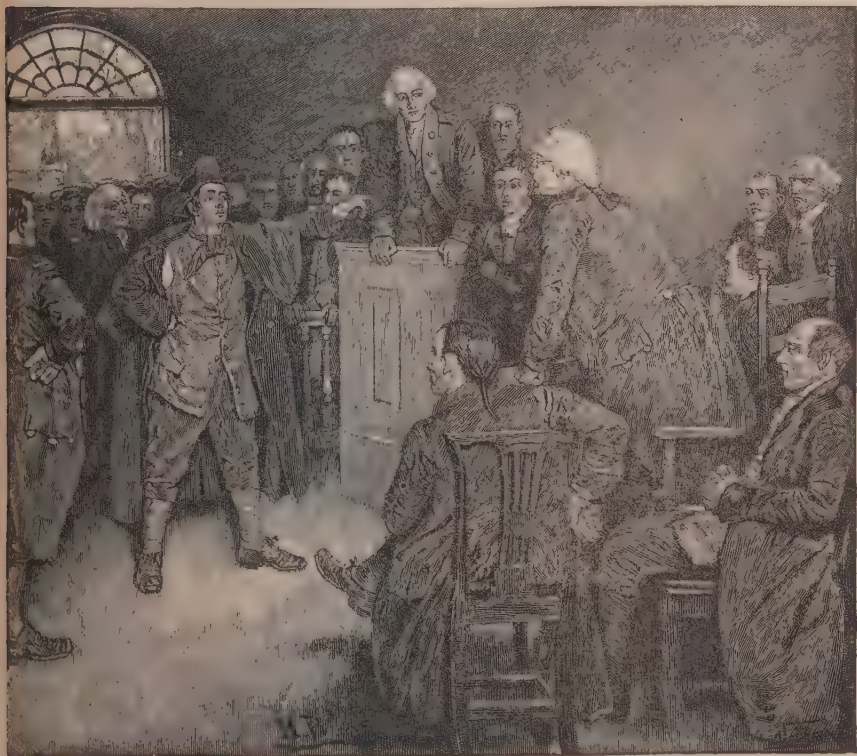

TENNESSEE

by the cheers of the crowd, and by a posse of State officials, but the mare outstripped them and bore her brave rider in safety to his home on the Nolichucky. As the news of Sevier's escape flew from hamlet to hamlet, the whole territory broke out into a blaze of bonfires and illuminations, and soon the people elected him—branded rebel and outlaw as he was—to the senate of North Carolina, and within twelve months Washington gave him the rank of general, with the supreme military command of the district now comprised in east Tennessee.

In 1790 it was organized, together with Kentucky, as "The Territory south of the Ohio." A distinct Territorial government was granted to Tennessee in 1794, and in 1796 (June 1) it entered the Union as a State. The constitution then framed was

amended in 1835, and again in 1853. The seat of State government was migratory, having been at Knoxville, Kingston, Nashville, and Murfreesboro until 1826, when it was permanently fixed at Nashville.

In War of 1812-15.—Tennessee took an active part in the War of 1812-15, especially in the operations in the Gulf region. Tidings of the declaration of war reached Andrew Jackson at the Hermitage, near Nashville, a week after that event, and on the same day (June 26) he authorized Governor Blount to tender to the President of the United States the services of himself and 2,500 men of his division (he was a major-general of Tennessee militia) as volunteers for the war. Madison received Jackson's generous offer with gratitude, and accepted it "with peculiar satisfaction." The Secretary of

THE RESCUE OF SEVIER.

TENNESSEE

War wrote (July 11) a cordial letter of acceptance to Governor Blount, and that official publicly thanked Jackson and his volunteers for the honor they had done the State of Tennessee by their patriotic movement. Everything seemed so quiet below the Tennessee River that it was past mid-autumn before the Tennessee volunteers were called upon. On Oct. 21 Governor Blount was asked for 1,500 volunteers to be sent to New Orleans to reinforce Wilkinson, and he made a requisition upon Jackson for that number. The latter immediately entered upon that military career which rendered his name famous. On Dec. 10, when the weather in Tennessee was intensely cold and deep snow lay upon the ground, about 2,000 troops assembled at Nashville, bearing clothes for both cold and warm weather. When organized, these consisted of two regiments of infantry of 700 men each, commanded respectively by Cols. William Hall and Thomas H. Benton, and a corps of cavalry, 670 in number, under the command of Col. John Coffee. These troops were composed of the best physical and social materials of the State.

On Jan 7, 1813, the little army went down the Cumberland River in boats, excepting the mounted men, whom Coffee led across the country to join the others at Natchez, on the Mississippi. In a letter to the Secretary of War, General Jackson, alluding to the conduct of some Pennsylvania and New York troops on the Niagara frontier who had constitutional objections to going into a foreign country by invading Canada, said: "I am now at the head of 2,070 volunteers—the choicest of our citizens—who go at the call of their country to execute the will of the government, 'who have no constitutional scruples,' and, if the government orders, will rejoice at the opportunity of placing the American eagle on the ramparts of Mobile, Pensacola, and Fort Augustine, effectually banishing from the Southern coasts all British influence." Jackson was then forty-six years of age. The troops, after many hardships, reached Natchez and disembarked, when they met an order from Wilkinson to halt there and await further orders, as he had no instructions concerning their employment; nor had he quarters for their accommodation. There Jackson and his men

waited until March 1, when he wrote to the Secretary of War, saying he saw little chance for the employment of his small army in the South, and suggested that they might be used in the North.

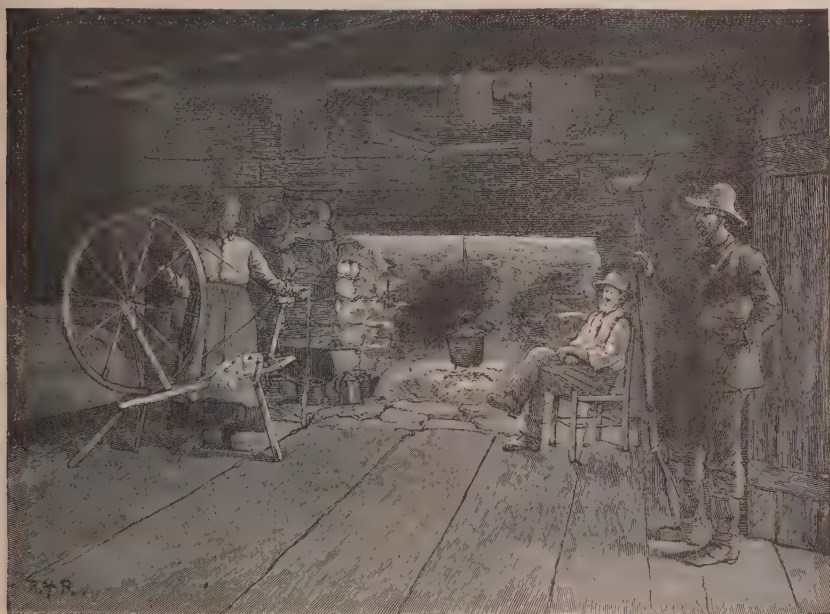

Day after day he waited anxiously for an answer. At length one came from John Armstrong, the new Secretary of War, who wrote simply that the causes of calling out the Tennessee volunteers to march to New Orleans had ceased to exist, and that on the receipt of that letter they would be dismissed from public service. He was directed to turn over to General Wilkinson all public property that may have been put into his hands. The letter concluded with the tender of cold and formal thanks of the President to Jackson and his troops. The hero's anger was fiercely kindled because of this cruel letter, which dismissed his army 500 miles from their homes, without pay, without sufficient clothing, without provisions, or means of transportation through a wilderness in which Indians only roamed. He wrote fiery letters to the President, Secretary of War, and Governor Blount, and took the responsibility of disobeying his orders and taking the troops back to Nashville before he would dismiss them. The Secretary apologized, saying he did not know that Jackson had moved far from Nashville when he wrote the letter. Late in March he began his homeward movement. It was full of peril and fatigue, and it took a month to accomplish it, moving 18 miles a day. The general shared the privations of his soldiers, who admired his wonderful endurance. They said he was as "tough as hickory," and he received the nickname, which he bore through life, of "Old Hickory." Drawn up in the public square at Nashville, the Tennessee volunteers were presented with an elegant stand of colors from the ladies of Knoxville, and were there disbanded, May 22, 1813.

The Civil War Period.—The people of Tennessee, like those of North Carolina, loved the Union supremely; but their governor, ISHAM G. HARRIS (*q. v.*), had been for months in confidential correspondence with the Confederates in the Gulf States and in South Carolina and Virginia. To further this cause he labored incessantly to bring about the secession of Tennessee. He called

TENNESSEE

a special session of the legislature at Nashville, Jan. 7, 1861, and in his message he recited a long list of so-called grievances which the people of the State had suffered under the rule of the national government. He appealed to their passions and prejudices, and recommended amendments to the national Constitution favorable to the perpetuation and protection of the slave system. The legislature provided for a convention, but decreed that when the people should elect the delegates they should vote for "Convention"

to meet on April 25, 1861, and in a message to them he strongly urged the immediate secession of the State. He urged that there was no propriety in wasting time in submitting the question to the people, for a revolution was imminent. A few days afterwards Henry W. Hilliard, a commissioner of the Confederate States of America, clothed with authority to negotiate a treaty of alliance with Tennessee, appeared (April 30) and was allowed to address the legislature. He expressed his belief that there was not a

INTERIOR OF A MOUNTAINEER'S HOME IN TENNESSEE.

or "No convention"; also, that any ordinance adopted by the convention concerning "Federal relations" should not be valid until submitted to the people for ratification or rejection. The election was held Feb. 9, 1861, and the Union candidates were elected by an aggregate majority of about 65,000; and, by a majority of nearly 12,000, decided not to have a convention. The loyal people were gratified, and believed the secession movements in the State would cease.

Governor Harris called the legislature

IX.—8.

true-hearted man in the South who would not spurn submission to the "Abolition North," and considered the system of government founded on slavery which had just been established as the only form of government that could be maintained in America. The legislature, in which was a majority of Confederate sympathizers, authorized (May 1) the governor to enter into a military league with the Confederate States, by which the whole military rule of the commonwealth was to be subjected to the will of Jefferson Davis. It

TENNESSEE

A CORN-MILL IN EAST TENNESSEE.

was done on May 7. The eighteen members from East Tennessee (which section remained loyal) did not vote.

The legislature passed an act to submit to a vote of the people of Tennessee a declaration of independence and an ordinance of secession: also an ordinance for the adoption of the constitution of the Confederate States of America. The governor was empowered to raise 50,000 volunteers "for the defence of the State," and, if necessary, to call out the whole available military strength of the commonwealth, to be under the absolute immediate control of the governor. He was also authorized to issue bonds of the State for \$5,000,000, to bear an annual interest of 8 per cent.

Pursuant to the act of the legislature authorizing the governor to take measures to annex that State to the Confederacy, the governor appointed Gustavus A. Henry, Archibald O. W. Totten,

and Washington Barrow, commissioners for the purpose. They negotiated a treaty with the agent of the Confederate States, Henry W. Hilliard, and on the 7th a copy of the treaty was submitted to the legislature. By the treaty the authorities of Tennessee were to "turn over" to the Confederate States "all the public property, naval stores, and munitions of war of which she might then be in possession, acquired from the United States, on the same terms and in the same manner as the other States of the Confederacy." Already Governor Harris had ordered (April 29, 1861) the seizure of Tennessee bonds to the amount of \$66,000 and \$5,000 in cash belonging to the United States in the hands of

the collector at Nashville. At about that time Jefferson Davis, disgusted with the timidity of Governor Magoffin, of Kentucky, recommended the Kentuckians "true to the South" to go into Tennessee and there "rally and organize."

Operations in East Tennessee.—East Tennessee, where loyalty to the Union was kept in submission to the Confederacy by the strong arm of military power. The people longed for deliverance, which seemed near at hand when, in January, 1862, the energetic General Mitchel made an effort to seize Chattanooga. His force was too small to effect it, for E. Kirby Smith was watching that region with a strong Confederate force. Mitchel asked Buell for reinforcements, but was denied. Finally General Negley, after a successful attack upon Confederates near Jasper, having made his way over the rugged ranges of the Cumberland Mountains, suddenly appeared opposite Chattanooga (June 7).

TENNESSEE

Towards evening he had heavy guns in position, and for two hours he cannonaded the town and the Confederate works near. The inhabitants and Confederates fled from the town. With a few more regiments Negley might have captured and held the place, and Mitchel could have marched into east Tennessee. But Buell would not allow it. The Confederates had already evacuated Cumberland Gap voluntarily, and the inhabitants of east Tennessee were jubilant with hope of deliverance. But they were again disappointed and compelled to wait. The cautious Buell and the fiery Mitchel did not work well together, and the latter was soon assigned to the command of the Department of the South.

In August, 1863, General Burnside was assigned to the command of the Army of the Ohio, and was ordered to take active co-operation with the Army of the Cumberland. He had gathered 20,000 men near Richmond, Ky., well disciplined and equipped. They left camp Aug. 21, climbed over the Cumberland Mountains, and

entered the magnificent valley of east Tennessee, their baggage and stores carried, in many places, by pack-mules. On his entering the valley 20,000 Confederates, commanded by GEN. SIMON B. BUCKNER (*q. v.*), fled to Georgia and joined Bragg. General Burnside had been joined by General Hartsuff and his command. Their numbers were swelled by junction with other troops. At the mouth of the Clinch River they first had communication with Colonel Minty's cavalry, on Rosecrans's extreme left. At Loudon bridge General Shackelford had a skirmish with Confederates, and drove them across the stream, they burning the magnificent structure, 2,000 feet long. Early in September a force of Confederates, under General Frazer, holding Cumberland Gap, surrendered to the Nationals, and the great valley between the Cumberland and Alleghany Mountains (of which Knoxville was the metropolis), extending from Cleveland to Bristol, seemed to be permanently rid of armed Confederates. The loyal inhabitants of that region

BURNSIDE'S ARMY AT CUMBERLAND GAP.

TENNESSEE

LOOKOUT MOUNTAIN IN SEPTEMBER, 1863

received the National troops with open arms.

After the battle of Stone River, or Murfreesboro, the armies of Rosecrans and Bragg lay confronting each other, the former at the scene of the battle and the latter below the Duck River. Bragg's main base of supplies was at Chattanooga. In that relative position the two armies continued from January until June, 1863. Meanwhile detached parties were very active in various parts of Tennessee. At the beginning of February (1863), General Wheeler, Bragg's chief of artillery, with 4,500 mounted men, with Brigadier-Generals Forrest and Wharton, attempted to recapture Fort Donelson. The chief object of the Confederates there was to interrupt the navigation of the Cumberland River, and thus interfere with the transportation of supplies for Rosecrans's army. The Confederates failed in their project, for the fort was well defended by a little

garrison of 600 men under Col. A. C. Harding, assisted by gunboats. There was a severe engagement (Feb. 3), and at 8 p.m. the Confederates fled with a loss of nearly 600 men. Harding lost 156, of whom fifty were made prisoners. Late in January, Gen. J. C. Davis swept over a considerable space in thirteen days, and captured 141 of Wheeler's men. Later, Gen. Earl Van Dorn, with a large mounted force, was hovering near Franklin, below Nashville. Sheridan, at Murfreesboro, and Colonel Colburn, at Franklin, marched simultaneously to confront him. Van Dorn was accompanied by Forrest. Colburn, with 2,700 men, moved against Van Dorn at Spring Hill, but failed to form a junction with Sheridan. After a sharp encounter he was forced to surrender (March 5) about 1,300 of his infantry. The remainder, with the cavalry, escaped. Sheridan, with about 1,800 cavalry, skirmished in several places with the Confed-

TENNESSEE

crates, and finally at Thompson's Station, after a sharp engagement, captured some of his antagonists and drove Van Dorn beyond the Duck River. He returned to Murfreesboro with nearly 100 prisoners, with a loss of ten men killed and wounded. On March 18, Col. A. S. Hall with 1,400 men was attacked by Morgan, the guerilla, and 2,000 men at Milton, 12 miles from Murfreesboro. With the aid of Harris's battery, in a three hours' struggle Hall repulsed Morgan, who lost 300 or 400 men killed and wounded. Early in April, Gen. Gordon Granger was in command at Franklin, building a fort near. He had about 5,000 troops. Van Dorn attacked him there (April 10) with 9,000 Confederates. The latter intended if successful to push on and seize Nashville, but he was repulsed with a loss of about 300 men. Rosecrans sent COL. ABDEL D. STREIGHT

(q. v.) on an extensive raid in Alabama and Georgia in April and May, which resulted in the capture of the leader and his men.

Battle of Lookout Mountain.—Late in November, 1863, GEN. SHERMAN (q. v.) approached Chattanooga. It was imperative that he should get over the river without being discovered. To draw the attention of the Confederates to another quarter, Hooker was ordered to engage them on the northern side of Lookout Mountain. His entire force consisted of approximately 10,000 men. The main Confederate force was encamped in a hollow half-way up the mountain, the summit of which was held by several brigades. Hooker began the attack on the morning of November 24. Geary, supported by Cruft, proceeded to Wauhatchie, crossing Lookout Creek there, the rest of the troops crossing in front of

BATTLE OF LOOKOUT MOUNTAIN.

TENNESSEE—TERNAY

the Confederates on temporary bridges. Geary crossed at eight o'clock, and, seizing a picket-guard of forty men, extended his line to the base of the mountain. By eleven o'clock Hooker was striving to drive the Confederates from the mountain; all his guns opened at once upon the breast-works and rifle-pits along the steep wooded acclivity, and Gross's and T. J. Wood's brigades, sweeping everything before them, captured the rifle-pits. At the same time the troops scaled the heights, driving the Confederates from the hollow to a plateau well up towards the crest and around towards the Chattanooga Valley. At considerably past noon the plateau was cleared, and the Confederates were retreating in confusion towards the Chattanooga Valley. Hooker established his line on the easterly face of the mountain; so that, by an enfilading fire, he completely commanded the Confederate defences, stretching across the valley to Missionary Ridge. See CHATTANOOGA CAMPAIGN, THE; LOOKOUT MOUNTAIN, BATTLE ON; MISSIONARY RIDGE, BATTLE OF.

General Burnside, with the Army of the Ohio, had occupied Knoxville, Sept. 23, 1863. The Confederate General Buckner, upon his advance, evacuated east Tennessee and joined Bragg at Chattanooga. Early in November, General Livingstone, with 16,000 men, advanced against Knoxville. On the 14th he crossed the Tennessee. Burnside repulsed him on the 16th at Campbell's Station, thereby gaining time to concentrate his army in Knoxville. Longstreet advanced, laid siege to the town, and assaulted it twice (Nov. 18 and 29), but was repulsed. Meantime Grant had defeated Bragg at Chattanooga, and Sherman, with 25,000 men, was on the way to relieve Knoxville. Livingstone, compelled to raise the siege, therefore retired up the Holston River, but did not entirely abandon eastern Tennessee until the next spring, when he again joined Lee in Virginia.

Later Events.—In 1866 the legislature passed an act disfranchising all citizens who voluntarily bore arms for or aided the Confederate government, and another making negroes and Indians competent witnesses, and in 1868 one for the suppression of the K κ -KLU κ KLAN (*q. v.*). A bill to settle the State debt at the rate

of fifty cents on the dollar was rejected by the people in 1879; a second one, to settle by the issue of compromise bonds, was passed in 1881, declared unconstitutional in 1882; and a new funding act was adopted in 1883. During 1891-93 there was much trouble at the coal and iron mining camps, growing out of the employment of convict labor. The legislature, in special session, resolved that it was powerless to abolish the convict-lease system, but declared it would not renew the lease, whereupon white miners set free over 300 convict miners. A second outbreak (1892) was settled by the State replacing all convicts by white free miners, and a later one necessitated the presence of the State militia.

During 1908 there was more trouble between white and colored miners, and parts of the State were overrun by NIGHT RIDERS (*q. v.*). A bitter political campaign was marked by the assassination (Nov. 9) of Edward W. Carmac, former United States Senator and editor of the *Tennessean*, at Nashville, by Robin Cooper. During his administration (1907-11) Governor Patterson granted 956 pardons, 152 of which were to persons convicted of murder.

Tenney, EDWARD PAYSON, author; born in Concord, N. H., Sept. 29, 1835; president of Colorado College, 1876-84; works include *The New West*; *Colorado and the New West*, etc.

Tenure-of-office Act. Late in February, 1867, a bill was passed by Congress limiting the powers of the President in removals from office. It took from the President the power to remove members of his cabinet excepting by permission of the Senate, declaring that they should hold office "for and during the term of the President by whom they may have been appointed, and for one month thereafter, subject to removal by and with the consent of the Senate." President Johnson vetoed this bill (March 2), when it was passed over his veto and became a law.

In 1885 President Cleveland maintained his rights under the Constitution, and the Senate restored to the President the power of making removals at all times without the consent of the Senate.

Ternay, CHARLES LOUIS D'ARSAC, CHEVALIER DE, naval officer; born in Ter-

TERRAPIN WAR—TERRITORIES OF THE UNITED STATES

may Castle, near Laudun, France, in 1722; entered the French service in 1738; commanded a squadron in the invasion of Newfoundland in June, 1762; resigned in 1772; and in 1779 was governor of Bourbon and the adjacent islands. He arrived at Newport, R. I., as commander of the fleet that brought troops to America under Rochambeau, July 10, 1780, and died there, Dec. 15, 1780.

Terrapin War. The opponents of the War of 1812 denounced the embargo acts in unmeasured terms of scorn and ridicule. They called the conflict a "Terrapin War"—the nation, by extinguishing commerce, drawing within its own shell like

FAC-SIMILE OF A NEWSPAPER CUT.

a terrapin. Squibs, epigrams, caricatures, and songs were levelled against the acts. Newspapers and speakers especially condemned the "land embargo"—the cutting-off trade with Canada. The trade so suddenly thrown into confusion by it was represented in a caricature by a bewildered serpent which had been suddenly stopped in its movements by two trees, marked, respectively, "Embargo" and "Non-Importation Act." The wondering snake is puzzled to know what has happened, and the head cries out, "What's the matter, tail?" The latter answers, "I can't get out." A cock, representing France, stands by, crowing joyfully. In the late spring and early summer of 1812 a very popular song was sung at all gatherings of the Federalists. The following is a copy:

"Huzza for our liberty, boys,
These are the days of our glory—
The days of true national joys,
When terrapins gallop before ye!
There's Porter and Grundy and Rhea,
In Congress who manfully vapor,
Who draw their six dollars a day,
And fight bloody battles *on paper!*
Ah, this is true Terrapin war."

"Poor Madison the tremors has got,
'Bout this same arming the nation;
They're a parcel of high-sounding words,
Go on—and he loses his station.
Then bring up your 'regulars,' lads,
In 'attitude' nothing ye lack, sirs.
Ye'll frighten to death the Danads.
With fire-coals blazing aback, sirs!
Oh, this is true Terrapin war!"

"As to powder and bullet and swords,
For, as they were never intended,
They're a parcel of high-sounding words,
But never to *action* extended.
Ye must frighten the rascals away.
In '*rapid descent*' on their quarters;
Then the plunder divide as ye may,
And drive them headlong in the waters.
Oh, this is *great* Terrapin war!"

Territories of the United States. All the States of the Republic were first organized as Territories, excepting the original thirteen States; but in the last few years the country has been running short of such possessions. Alaska, though usually spoken of as a Territory, is not one in a legal sense, but is an administrative and judicial district, unorganized as to the customary forms of Territorial government, having judicial, customs, and military officers, and a governor, and being administered under the general laws of Oregon. Its government at present is of a tentative character; it has a representative in Congress; and all of its officials are appointed by the President. Arizona, created a Territory in 1863, and New Mexico, similarly treated in 1850, were both enabled by Congress to become States in 1910. Indian and Oklahoma Territories were united and admitted into the Union as the State of Oklahoma in 1907. The District of Columbia is not a Territory, but a federal district, governed by commissioners under the direct legislation of Congress. In the usual and legal sense of the word there are no longer any Territories in the continental part of the United States.

Of our insular or non-contiguous possessions, the Philippine Islands have been

TERRY—TETINCHOUA

given a civil form of government with much native responsibility, and are under the general administration of the Philippine Commission, and the direct authority of a governor-general, and have representation in Congress. Hawaii and Porto Rico are the only possessions of a strictly Territorial character, each having representative government, a delegate in Congress, and a governor appointed by the President. Hawaii elects both houses of its legislature; Porto Rico has a house of delegates elected by the people and an executive council appointed by the President. Guam, Tutuila, Wake, and other islands in the Pacific are administered by naval officers solely.

Terry, ALFRED HOWE, military officer; born in Hartford, Conn., Nov. 10, 1827; educated at Yale College; admitted to the bar in 1848, and practised from 1854 to 1860. He entered the national army as colonel of the 2d Connecticut Volunteers; led the regiment in the battle of Bull Run, retiring in good order when defeat was certain, hurrying up the rear of the retreat, and saving a large amount of government property. Returning home and raising the 7th Connecticut Volunteers, he was attached to the expedition to the coast of South Carolina, under Gen. W. T. Sherman, and occupied Hilton Head. He assisted in the capture of Port Royal and Fort Pulaski, and was placed in command of the latter; and during the summer of 1862 had command of the posts and forts on the eastern coast of Florida, having been made brigadier-general of volunteers in March. He led a division in the operations against Fort Wagner, and afterwards in the Army of the James, in its operations against Petersburg and Richmond. From May to December, 1864, he commanded the 10th Corps; and in January, 1865, aided by the fleet of Porter, he captured Fort Fisher. For this act he was made major-general of volunteers and brigadier-general United States army. He afterwards captured Wilmington, N. C., and was brevetted major-general. After the surrender of Lee he was in command of Richmond. He was promoted major-general in 1886, and was retired in 1888. He died in New Haven, Conn., Dec. 16, 1890.

Terry, SILAS WRIGHT, naval officer;

born in Kentucky, Dec. 28, 1842; appointed acting midshipman in the Naval Academy in 1858; was engaged in blockading service on the Atlantic coast in 1861-63; in the Mississippi squadron and on the Red River expedition in 1863-64; and was present during the naval operations at Forts Fisher and Anderson, at the capture of Wilmington, and at the fall of Richmond. In January, 1882, while in command of the *Marion*, he rescued the crew of the bark *Trinity*, which had been wrecked on Heard Island, in the Indian Ocean, in 1880; and in February, while at Cape Town, saved the English ship *Poonah* from total loss by hauling her off the beach, for which he received the thanks of the governments of both Cape Colony and Great Britain. He was assigned to the command of the *Iowa* in 1898; detached in September, 1899; appointed to the command of the navy-yard at Washington, D. C., March 24, 1900, and promoted rear-admiral on the 27th following. He died in Washington, D. C., Feb. 9, 1911.

Tesla, NICOLA, electrician; born in Smiljan, Croatia, Austria-Hungary, in 1857; graduated at the Polytechnic School in Gratz; later studied philosophy and languages at Prague and Budapest; came to the United States and was employed in the Edison works; became electrician of the Tesla Electric Light Company, and established the Tesla Laboratory in New York for independent electrical research. He invented the rotary magnetic field embodied in the apparatus used in the transmission of power from Niagara Falls; new forms of dynamos, transformers, induction coils, condensers, arc and incandescent lamps, and the oscillator combining steam-engine and dynamo, and many other inventions.

Test Oath. See OATHS.

Tetinchoua, Miami Indian chief; was met by the French traveller Nicolas Rerrot, at Chicago, in 1671, and is described by him as a great chief, having had control of about 4,000 warriors. He was constantly guarded night and day by forty men, and scarcely ever had any personal communication with his people, but issued orders to them through subordinates. He was unable on account of old age to go to the mouth of Lake Superior, where all

TEXAS

the country bordering on the lakes was formally claimed by the French, but delegating the Pottawatomies to act for him.

It is said that FATHER CLAUDE DABLON (*q. v.*) met him and his 3,000 Miamis in 1672, but made no converts.

TEXAS

Texas (name supposed to be derived from an Indian word used as a token of friendship and applied by the Spaniards to the Hasinai tribes of the Angeline and Upper Neches valleys), a State in the West South Central Division of the North American Union, the largest of all; bounded on the n. and e. by New Mexico, Oklahoma, Arkansas, and Louisiana; s. e. by the Gulf of Mexico; s. w. by Mexico; and w. by New Mexico; area, 265,896 square miles, of which 3,498 are water surface; extreme breadth, e. to w., 760 miles; extreme length, n. to s., 620 miles; number of counties, 246; capital, Austin; popular name, "the Lone Star State"; State flower, the Blue-bonnet; State motto, none; admitted into the Union as the twenty-eighth State, Dec. 29, 1845; seceded, Feb. 23, 1861; readmitted, March 30, 1870. Pop. (1910), 3,896,542.

General Statistics.—Texas ranks first among the cotton-growing States of the Union, and is also noted for its large livestock interests. There are over 416,000 farms, comprising 27,120,000 improved acres, and representing a value in lands, buildings, and implements of \$1,879,243,000, an increase in the value of lands and buildings in ten years of 163 per cent. Ordinary farm products have a value of over \$167,400,000, corn (\$114,206,000), wheat, forage, and oats leading. Irrigation projects completed and under construction represent a value of nearly \$13,500,000, and serve an area of 1,253,000 acres. In the cotton-growing industry, the highest single-year production on record (1906) was 4,066,472 bales of fibre and 1,858,000 long tons of seed; and the record values were (1910), fibre, \$214,520,000; seed, \$33,360,000; making the total value of this crop \$247,880,000. Domestic animals, poultry, and bees have a value of over \$313,764,263, an increase in ten years of 30 per cent.; cattle (\$129,130,900), horses (\$83,532,700), mules (\$73,781,000), and swine (\$11,606,000) leading.

The State has a very large commerce in general merchandise, its chief port, Galveston, ranking second among the exporting cities of the country, with values exceeding \$201,875,000. With Sabine, Brazos de Santiago, Corpus Christi, Paso del Norte, and Saluria, the imports at all ports exceed \$15,709,500; and the exports, \$249,317,000, an aggregate merchandise trade of more than \$265,000,000. General business interests are served by 519 national banks, with \$44,076,000 in capital and \$293,785,460 in resources; 533 State

STATE SEAL OF TEXAS.

banks, with \$11,973,000 capital and \$46,676,409 resources; 24 private banks, with \$2,786,281 capital and \$9,508,587 resources; and 51 loan and trust companies, with \$5,935,000 capital and \$22,820,631 resources. The exchanges at the clearing-houses at Houston (\$647,457,500), Galveston, Fort Worth, Austin, and Beaumont aggregate over \$1,351,111,300 in a single year.

Manufacturing industries are represented by 4,588 factory-system establishments, employing \$216,876,000 capital and 70,229 wage-earners; paying \$48,775,000 for salaries and wages and \$178,179,000 for materials; and yielding products val-

TEXAS

ued at \$272,896,000. These figures show an increase in ten years in capital, from \$63,655,616; wage-earners, from 38,604; salaries and wages, from \$19,830,357; cost of materials, from \$54,388,303; and value of products, from \$92,894,433. The principal products are flour and grist, cottonseed oil and cake, lumber and timber, packed meat, steam-railroad cars, periodicals and books, foundry and machine-shop work, and malt liquors. The internal revenue collections on taxable manufactures exceed \$1,000,000 in a single year. The most valuable of mineral resources is petroleum, the output of which increased from 48 barrels in 1889 to the maximum of 28,136,189 barrels in 1905, and then began decreasing. The highest single-year value of output was \$10,410,865 in the year of 1907.

Religious interests are promoted by 12,354 organizations of white congregations, having 9,589 church edifices, 1,226,906 communicants or members, 533,535 Sunday-school scholars, and church property valued at \$22,949,976, the strongest denominations numerically being the Baptist, Methodist, Roman Catholic, Disciples, Presbyterian, and Lutheran; and by 5,051 organizations of colored congregations, having 2,860 church edifices, 227,032 members, and church property valued at \$3,106,101, the leading denominations being the Baptist National Convention, Methodist Episcopal, African Methodist, and Colored Methodist. The Roman Catholic Church has bishops at Brownsville, Dallas, Galveston, and San Antonio; the Protestant Episcopal, at Austin, Dallas, and San Antonio; and the Methodist Episcopal South, at Sherman and San Antonio.

The school age is 7-17; enrolment in the public schools, white, 681,593; colored, 152,038; average daily attendance, 462,472 white; 95,035 colored; value of public-school property, \$19,256,579; total revenue, \$9,855,641; total expenditure, \$10,289,755; estimated number of pupils in private and parochial schools, 10,000. In 1911 the permanent school fund aggregated \$17,279,353, nearly all of which was invested in State, municipal, and other bonds. For higher education there are fifteen universities and colleges for men and both sexes; four colleges for women only; four schools each of theology,

medicine, and pharmacy, one of law, and two of dentistry; public normal schools at Denton, Huntsville, and Prairie View; 420 public high schools; manual and industrial training schools at Austin, Campbell, Denton, and San Antonio; and nine colleges for the colored race. The State maintains a reform school at Gatesville, and separate institutions for white and colored deaf, dumb, and blind, at Austin. The leading institutions of college grade are the University of Texas, at Austin; State Agricultural and Mechanical College, College Station; Fort Worth University (M. E.); Trinity University (Presb.), Waxahachie; Baylor University (Bapt.), Waco; St. Louis College (R. C.), San Antonio; Polytechnic College (M. E. S.), Fort Worth; colleges for women at Belton (Bapt.), San Antonio (M. E. S.), Sherman (M. E. S.), and South Houston (non-sect.); and for the colored race, State Normal College, Prairie View; Wiley University (M. E.), Marshall; Guadalupe College (Bapt.), Seguin; Paul Quinn College (A. M. E.), Waco; Samuel Houston College (M. E.), Austin; Tillotson College (Con.), Austin; and Mary Allen Seminary (Presb.), Crockett.

Government.—A declaration of independence and a provisional constitution were framed at San Felipe in 1835; a constitution for the Republic of Texas was adopted in convention, and Samuel Houston was inaugurated President in 1836; the first State constitution was ratified by popular vote in 1845; and the first legislature was convened under it, and James Pinckney Henderson was inaugurated the first governor, in 1846. On March 23, 1861, the legislature ratified the constitution of the Confederate States; in 1866 a new constitution was ratified by popular vote; in 1869 another, framed by a convention convened under the Reconstruction Act of Congress, was similarly ratified; and in 1876 still another was adopted. The Fourteenth and Fifteenth amendments to the federal Constitution were ratified by the legislature, Feb. 18, 1870. Five amendments to the constitution were ratified by popular vote in 1891; three in 1904; one out of three in 1908; and one in 1909—all chiefly concerning financial matters.

In 1907 a pure-food law was adopted;

TEXAS

the anti-trust law was made more stringent; and blacklisting, bucket-shops, gambling on baseball and football games, lobbying, and political contributions by corporations were prohibited. In 1908 the State Supreme Court decided that the Waters-Pierce Oil Company must pay \$1,623,000 penalties and retire from business in the State, whereupon the company appealed to the United States Supreme Court. A proposition to submit to popular vote a prohibition amendment to the constitution was declared both adopted and defeated, the latter on a technicality, and the Democratic State Convention resolved to resubmit the proposed amendment. On the ground that the State Railroad Commission had ordered it to spend \$2,000,000 on betterments, the International and Great Northern System placed itself in the hands of a receiver. The railroad-rate law of 1905 was declared unconstitutional by the United States Supreme Court. Another attempt to secure State-wide prohibition was made at a special session of the legislature in 1910, when the house adopted and the senate defeated bills aiming thereat, and in the special State liquor elections in 1911 large anti-prohibition majorities were recorded.

The executive authority is vested in a governor (annual salary, \$4,000), lieutenant-governor, secretary of state, treasurer, comptroller, attorney-general, superintendent of public instruction, and commissioners of agriculture, insurance, public lands, railroads, and several other departments—official terms, two years, unless otherwise specified. The legislature consists of a senate of thirty-one members and a house of representatives of 109 members—terms of senators, four years; of representatives, two years; salary of each, \$5 per diem; sessions biennial; limit, none, but members receive regular pay for sixty days and \$2 per diem thereafter. The chief judicial authority is a Supreme Court, comprising a chief-justice and two associate justices. In 1911 the total bonded debt was \$3,977,500, of which all except \$1,300 was held in various State

tain De Leon, a Spanish officer, was sent to drive out the French. He found them scattered, and the next year he returned with 110 men and some friars, and on the site of a fort built by La Salle, on Matagorda Bay, established a Spanish mission. A Spanish governor, with troops, was sent thither in 1691, but Indian hostilities and menaces of famine caused the settlement to be abandoned in 1693. In 1714 the French again attempted to plant settlements in Texas, under the direction of Crozat, of Louisiana. Soon afterwards

revolution, were compelled to retreat into the United States in 1827. In 1830 Bustamante, who had made himself dictator of Mexico, issued a decree forbidding the people of the United States to enter Texas as colonists. The American settlers in Texas then numbered about 20,000, and in 1833 they held a convention, determined to separate Texas from Coahuila, prepared a State constitution, and requested Santa Ana, then at the head of the government of Mexico, to admit them as a separate State of the republic. COL.

TEXAS RANGERS.

(1715) Spanish missions were planted at various points. In 1765 there were about 750 white inhabitants in Texas.

Texas was a part of the Spanish province of Mexico which had declared itself independent of Spain. In 1824, when a considerable number of colonists from the United States were there, Mexico united Coahuila with Texas, and placed a Mexican as governor over the united states. He treated the Americans there with great injustice, and some of them, engaged in a

STEPHEN F. AUSTIN (*q. v.*), representing the American colonists, went to Mexico, where Santa Ana detained him until 1835. A committee of safety was created in Texas, which assumed governmental powers. A skirmish took place with some Mexicans near Gonzales, Oct. 2, 1835, and other battles followed. On Nov. 9, a provisional government was formed in a convention called the "Consultation," and a governor and a lieutenant-governor were chosen.

At the same time SAMUEL HOUSTON

TEXAS

SAM HOUSTON.

(*q. v.*), of Tennessee, who had settled in Texas, was chosen commander-in-chief of the forces, and Austin was sent as commissioner to the United States. After San Antonio de Bexar was captured (Dec. 10), the entire Mexican force was driven out of Texas, and on the 20th a declaration of independence was adopted, and issued at Goliad, by Capt. Philip Dimitt and others. Santa Ana, with a well-provided army of 7,500 men, set out for the recovery of Texas. He invested the ALAMO (*q. v.*), a strong fort near San Antonio, with 4,000 men, and, after bombarding it eleven days, carried it by storm. It was garrisoned by about 170 men, under Capt. W. B. Travis. The whole garrison was massacred (March 6) by order of Santa Ana—only one woman, a child, and a servant were saved. "Remember the Alamo!" was a Texan war-cry after that. The Mexicans lost, in the attack, 1,600 men.

On March 1 a convention issued a dec-

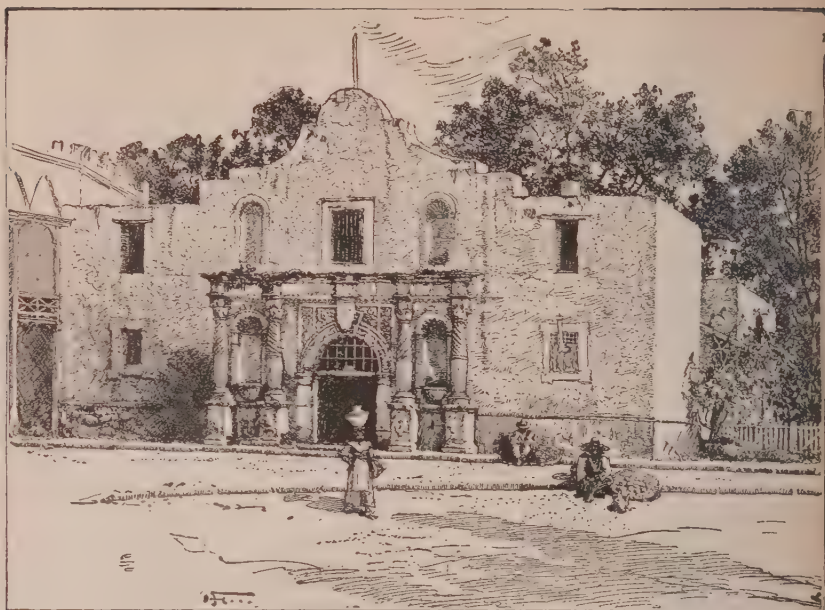

laration of independence, and a provisional president (David G. Burnet) was chosen. On the 27th the command of Colonel Fanning, at Goliad, were massacred in cold blood, and successive defeats of the Texans produced a panic. Houston, meanwhile, in order to scatter the Mexican forces, continually fell back, until he reached San Jacinto. There, at the head of a force of 800 troops, he gave battle (April 21, 1836) to about twice that number of Mexicans, and in the pursuit of them killed 630, wounded 208, and took 730 prisoners. Among the latter, captured the next day, was President Santa Ana. His force was annihilated. The survivors fled westward in terror. The war was practically at an end. The Mexicans did not again invade Texas. Houston was elected president of the republic (September, 1836). The independence of Texas was acknowledged by the United States in March, 1837, but Mexico did not give up her claim to it. See ACQUISITION OF TERRITORY; BENTON, THOMAS HART.

Annexation of Texas.—The Southern people were anxious to have the State of Texas annexed to the United States, and such a desire was a prevailing feeling in that sovereign State. The proposition, when formally made, was opposed by the people of the North, because the annexation would increase the area and political strength of the slave power, and lead to a war with Mexico. But the matter was persisted in by the South, and, with the approbation of Presi-

MAP OF THE BATTLE OF SAN JACINTO.

TEXAS

THE ALAMO.

dent Tyler, a treaty to that effect was signed in Washington, D. C., April 12, 1844, by Mr. Calhoun, Secretary of State, and Messrs. Van Zandt and Henderson on the part of Texas. It was rejected by the Senate in June following. The project was presented at the next session of Congress in the form of a joint resolution. It had been made a leading political question at the Presidential election in the autumn of 1844. James K. Polk had been nominated over Mr. Van Buren, because he was in favor of the annexation. The joint resolution was adopted March 1, 1845, and received the assent of President Tyler the next day. On the last day of his term of office he sent a message to the Texas government, with a copy of the joint resolutions of Congress in favor of annexation. These were considered by a convention in Texas, called for the purpose of forming a State constitution. That body approved the measure (July 4, 1845), and on that day Texas became one of the States of the Union.

The following is the text of the joint

resolution of the Congress and of the Texas ordinance:

COMMITTEE ROOM, July 4, 1845.

Hon. Thomas J. Rusk, President of the Convention:

The committee to whom was committed the communication of his Excellency the President of the republic, together with the accompanying documents, have had the same under consideration, and have instructed me to report the following ordinance, and recommend its adoption by the convention.

ABNER S. LIPSCOMB, Chairman.

Whereas, the Congress of the United States of America has passed resolutions providing for the annexation of Texas to that Union, which resolutions were approved by the President of the United States on the first day of March, 1845; and

Whereas, the President of the United States has submitted to Texas the first and second sections of the said resolutions as the basis upon which Texas may be ad-

TEXAS

mitted as one of the States of said Union, and

Whereas, the existing government of the republic of Texas has assented to the proposals thus made, the terms and conditions of which are as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, that Congress doth consent that the territory properly included within, and rightfully belonging to, the republic of Texas, may be erected into a new State, to be called the State of Texas, with a republican form of government, adopted by the people of said republic, by deputies in convention assembled, with consent of the existing government, in order that the same may be admitted as one of the States of this Union.

And be it further resolved, that the foregoing consent of Congress is given upon the following conditions, to wit: First, said State to be formed, subject to the adjustment by this government of all questions of boundary that may arise with others governments, and the constitution thereof, with the proper evidence of its adoption by the people of said republic of Texas, shall be transmitted to the President of the United States, to be laid before Congress for its final action, on or before the first day of January, 1846; second, said State, when admitted into the Union, after ceding to the United States all public edifices, fortifications, barracks, forts and harbors, navy and navy-yards, docks, magazines, and armaments, and all other means pertaining to the public defence belonging to the said republic, shall retain all its public funds, debts, taxes, and dues of every kind which may belong to or be due and owing to the said republic, and shall also retain all the vacant and unappropriated lands lying within its limits, to be applied to the payment of the debts and liabilities of said republic of Texas, and the residue of said lands, after discharging said debts and liabilities, to be disposed of as said State may direct; but in no event are said debts and liabilities to become a charge upon the government of the United States; third, new States, of convenient size, not exceeding four in number, in addition to said State of Texas, and having sufficient population, may

hereafter, by the consent of said State, be formed out of the territory thereof, which shall be entitled to admission under the provisions of the federal Constitution; and such States as may be formed out of that portion of said territory lying south of 36° 30' N. lat., commonly known as the Missouri Compromise line, shall be admitted into the Union, with or without slavery, as the people of each State asking admission may desire; and in such State or States as shall be formed out of said territory north of said Missouri Compromise line slavery or involuntary servitude (except for crime) shall be prohibited.

Now, in order to manifest the assent of the people of the republic, as is required in the above-recited portions of said resolution, we, the deputies of the people of Texas in convention assembled, in their name and by their authority, do ordain and declare that we assent to, and accept the proposals, conditions, and guarantees contained in the first and second sections of the resolutions of the Congress of the United States aforesaid.

Adopted by a vote of 56 to 1, July 4, 1845, in the tenth year of the republic.

THOMAS J. RUSK, President.

JAMES H. RAYMOND, Secretary.

After the cession of Louisiana to the United States a controversy arose about its western boundary, which was amicably settled, in 1806, by General Wilkinson and the Spanish commander, establishing the territory between the Sabine River and Arroya Honda as neutral ground. In 1806 revolutionary movements, incited by those of AARON BURR (*q. v.*), began in that region, and many skirmishes and battles occurred, chiefly by invasions of Americans. In conflicts in 1813 the Spanish lost about 1,000 men; and in a conflict the same year, a force of about 2,500 Americans and revolted Mexicans was nearly destroyed. Only about 100 escaped. The Spaniards murdered 700 of the peaceable inhabitants of San Antonio. After the close of the War of 1812-15 Lafitte made Galveston Island his headquarters, established there a town named Campeachy, and remained there until 1821, when the settlement was broker up by United States forces. In 1819 the Sabine was established as the eastern boundary of Texas.

TEXAS

but dissatisfaction caused disturbances to continue, and the territory was almost deserted. In 1820 Moses Austin, then living in Missouri, received from the Spanish authorities of Mexico a grant of land in Texas, and dying, his son, Stephen F., received a confirmation of the grant in 1823. Emigrants from the United States flocked into Texas. A thousand families were soon there. Spanish rule was harsh towards the American colonists, and they were so oppressed that, in 1833, they took the measures to obtain the independence of the State already described. The annexation of Texas to the United States led to a war with Mexico (see MEXICO, WAR WITH), begun in 1846, and ended by treaty in February, 1848. It then embraced an area of 376,163 square miles. In 1850 the State ceded to the United States its claims to all territory beyond its present limits (274,353 square miles), in consideration of \$10,000,000 in bonds, with the proceeds of which the State debt was paid.

TEXAS AS CLAIMED BY THE UNITED STATES.

Civil War Period.—In 1860 began the movement for secession. Governor Samuel Houston, opposed the movement with all his might; but members of the KNIGHTS OF THE GOLDEN CIRCLE (*q. v.*) were working secretly and effectively. Among the Knights were many members of the legislature, and active politicians all over the State. Sixty of these irresponsible persons, early in January, 1861, called a State convention, to meet at Austin on the 28th of that month; and a single member of the legislature issued a call for the assembling of that body at the same time and place. When they met, the legislature, by a joint resolution, declared the convention a legally constituted body. Governor Houston protested against the assumption of any power by the convention, except to refer the matter of secession to the people. The convention assembled in the hall of the House of Representatives, on the appointed day, under the chairmanship of JUDGE JOHN H. REAGAN (*q. v.*). A commissioner from South Carolina (McQueen) was there

to assist. Not one-half of the 122 counties in the State were represented. On Feb. 1, 1861, an ordinance of secession was adopted by a vote of 166 against 7. It declared that the national government had failed "to accomplish the purpose of the compact of union between the States," and the chief grievance complained of was that the national government would no longer uphold the slave system. They therefore abrogated, in the name of the people of Texas, the ordinance of annexation adopted July 4, 1845. They talked of a "resumption of sovereign powers" with some plausibility, for Texas was the only State in the Union that had ever possessed them, as an absolutely independent State. They decreed that the ordinance should be submitted to the people, but the day named (Feb. 23) was so early that no opportunity was afforded the people for discussion.

The convention appointed a committee of safety to carry out its decision before the people could think or act upon the

ordinance of secession. The committee was immediately organized, and appointed two of their number (Devine and Maverick) commissioners to treat with Gen. David E. Twiggs, then in command of the National troops in Texas, for the surrender of his army and the public property under his control to the authorities of Texas. Twiggs performed that act. In counting the votes cast on Feb. 23 concerning the ordinance of secession there seemed to be fully 23,000 majority in favor of the ordinance, when it is asserted that really a very large proportion of the people of Texas were opposed to it.

Governor Houston's Loyal Address to the people of his State, early in March, 1861, revealed what he called its usurpations. He had denounced the convention as an illegal body, gathered through fraud and violence. "To enumerate all its usurpations," he said, "would be impossible, as a great portion of its proceedings were in secret. This much has been revealed: It has elected delegates to the provisional council of the Confederate States at Montgomery before Texas had withdrawn from the Union; and also, on the 2d day of March, annexed Texas to the Confederate States and constituted themselves members of Congress, when it was not officially known by the convention until the 4th of March that a majority of the people had voted for secession. While a portion of these delegates were representing Texas in the Congress of the Confederate States, two of them, still claiming to be United States Senators, have continued to represent Texas in the United States Senate, under the administration of Mr. Lincoln—an administration which the people of Texas have declared odious and not to be borne. Yet Texas has been exposed to obloquy and forced to occupy the ridiculous attitude, before the world, of attempting to maintain her position as one of the United States, and, at the same time, claim to be one of the Confederate States. It has created a committee of safety, a portion of which has assumed the executive power of the government, and, to supplant the executive authority, have entered into negotiations with federal officers. This committee, and commissioners acting under it, have caused

the Federal troops to be removed from posts in the country exposed to Indian depredations, and had them located, with their arms and field-batteries, on the coast, where, if their desire is to maintain a position in the country, they cannot only do so successfully, but destroy the commerce of the State. They have usurped the power to withdraw these troops from the frontier; but though in possession of ample stores, munitions of war, and transportation, have failed to supply troops in place of those removed. As a consequence, the wail of women and children is heard upon the border. Devastation and ruin have thus come upon the people; and though the convention, with all the means in its power, has been in session two weeks (adjourned session), no succor has been sent to a devastated frontier. . . . The convention has assumed to appoint agents to foreign States, and created offices, civil and military, unknown to the laws, at its will, keeping secret its proceedings. It has deprived the people of a right to know its doings. It has appointed officers and agents under its assumed authority." "It has declared," he said, "that the people of Texas ratify the provisional government of the Confederate States, requiring all persons then in office to take an oath of allegiance to the same or suffer the penalty of removal." It had changed the State constitution and established a test-oath of allegiance to the Confederate States, and, "in the exercise of its petty tyranny," had required the governor and other officers to appear at its bar at a certain time to take the oath. It had assumed to create organic laws, and to put the same into execution. "It has overthrown," he said, "the theory of free government by combining in itself all the departments of government and exercising the powers belonging to each." The governor concluded by saying: "I have refused to recognize this convention. I believe it has received none of the powers it has assumed either from the people or the legislature. I believe it guilty of a usurpation which the people cannot suffer tamely and preserve their liberties. I am ready to lay down my life to maintain the rights and liberties of Texas. I am ready to lay down office rather than yield to usurpation and degradation."

TEXAS

Recovering the State.—In 1863 General Banks sent Franklin, with 4,000 troops, accompanied by four gunboats, under Crocker, to seize the Confederate post at Sabine Pass, on the boundary-line between Louisiana and Texas, preparatory to an attempt to recover the latter State from Confederate control. The expedition sailed from New Orleans Sept. 5. A premature attack was made by the gunboats on the garrison at Sabine Pass (Sept. 8), and the expedition was a disastrous failure. Two of the gunboats were captured, and the transports, with Franklin's troops, fled back to New Orleans, the Nationals

a march upon Alexandria and Shreveport was again begun. When, in obedience to orders, he began falling back, he was suddenly and furiously struck by Confederates under Gen. Richard Taylor, and a regiment (23d Wisconsin) on which the blow fell was reduced from 226 men to ninety-eight, most of them made prisoners. Meanwhile about 6,000 National troops, under General Dana, with some war-vessels, had sailed for the Rio Grande. Banks, in person, accompanied the expedition. The troops debarked Nov. 2 at Brazos de Santiago, drove a small Confederate cavalry force stationed there, and followed them to

STATE CAPITOL AT AUSTIN, TEXAS.

having lost 200 men made prisoners and fifty killed and wounded; also two gunboats and fifteen heavy rifled cannon. The garrison attacked consisted of about 200 men, and only forty were present. Banks now concentrated his forces on the Atchafalaya, for the purpose of penetrating Texas by way of Shreveport, on the Red River; but this design was abandoned for a time (see RED RIVER EXPEDITION), and it was determined to attempt to seize and hold the coast harbors of Texas. To mask this movement, Gen. C. C. Washburne, with a considerable body of troops, advanced from Brashear City to Opelousas, to give the impression that

Brownsville, opposite Matamoras, which Banks entered on Nov. 6. At the close of the year the National troops occupied all the strong positions on the Texan coast excepting Galveston Island and a formidable work at the mouth of the Brazos River, and the Confederates had abandoned all Texas west of the Colorado River.

Notwithstanding the downfall of the civil and military power of the Confederacy east of the Mississippi, the insurgents west of it, under the command and influence of Gen. E. Kirby Smith, were disposed to continue the conflict longer. He addressed his soldiers on April

TEXAS

21. 1865, telling them that upon their prowess depended "the hopes of the [Confederate] nation." He assured them that there were hopes of succor from abroad. "Protract the struggle," he said, "and you will surely receive the aid of nations who already deeply sympathize with you." Public meetings were held in Texas, where resolutions to continue the contest were adopted. To meet this danger, General Sheridan was sent to New Orleans with a large force, and made preparations for a vigorous campaign in Texas. His appearance dismayed the trans-Mississippi insurgents, and they refused to longer follow their leaders in the hopeless struggle. General Smith formally surrendered his whole command to General Canby (May 26), but exhibited "the bad faith," said Grant in his report, "of first disbanding most of his army, and permitting an indiscriminate plunder of the public property." So ended the Civil War in the field.

Andrew J. Hamilton was appointed by the President provisional governor in the summer of 1865, and measures were taken for the reorganization of civil government there. Under the reconstruction acts of 1867, Texas, with Louisiana, was made a military district, and subjected to military rule under General Sheridan. A convention assembled Dec. 7, 1868, adopted a constitution, which was ratified at an election (Nov. 30 to Dec. 3) in 1869, and a governor and legislature were chosen at the same time. The Fourteenth and Fifteenth amendments to the national Constitution were ratified (Feb. 23, 1870), and on March 30, by act of Congress, the State was entitled to representation in Congress. On April 16 the government was transferred to the civil authorities.

Later Events.—The principal political events have already been chronicled under *Government*. The State Capitol was destroyed by fire in 1881, and a new one dedicated in 1888. In 1891-92 bands of Mexican revolutionists crossed the border and made some trouble. A great dam on the Colorado River near Austin was completed in 1893, and destroyed in a flood in 1900, which caused a property loss of over \$3,000,000. In 1911 it was decided to build a new dam at a cost of \$1,720,000, which would be the prop-

erty of the city, and furnish it with an abundance of water and power for manufacturing purposes. Galveston suffered by a tornado a loss of over 1,000 lives and \$30,000,000 in property, Sept. 8, 1900, and July 29, 1904, its great protective seawall was completed at a cost of about \$1,500,000.

On the night of Aug. 13-14, 1906, many shots were fired into occupied dwellings in Brownsville, and it was charged that the firing was done by colored soldiers of the Twenty-fifth U. S. Infantry. The affair created wide-spread excitement; President Roosevelt discharged all the enlisted men of the three companies said to be involved in the shooting; the President sent a special message to Congress concerning it; Senator Joseph B. Foraker, of Ohio, made a vigorous defence of the accused soldiers; and a military court charged the shooting to the negro soldiers.

In 1910, during the early part of the revolution in Mexico, there was considerable trouble along the Rio Grande. As the revolution spread, President Taft, in 1911, mobilized an army of approximately 20,000 men along the boundary, with principal rendezvous at El Paso and San Antonio, and sent war-ships to the vicinity of the Pacific and Gulf coasts of Mexico, ostensibly as a military manœuvre. During several attacks by the revolutionists on Federal posts, especially in the assaults on Ciudad Juarez in May, a number of persons on the Texan side of the river were wounded by "wild" bullets from the other side. On the success of the revolution and the resignation and self-expatriation of President Diaz (May), the "manœuvre" division of the American army was gradually withdrawn, leaving, however, a strong border patrol.

A slight flurry of excitement was created later in the year by the arrest of Gen. Bernardo Reyes at San Antonio (Nov. 18) by a United States marshal after his indictment by a Federal grand jury on charges of having violated the neutrality laws by planning in Texas a military expedition against Mexico. The United States troops along the boundary line were, in consequence, ordered to prepare for active patrol, and the entire national guard of Texas was ordered held in instant readiness for field service. Docu-

TEXAS RANGERS—THACHER

ments seized by the United States Secret Service men indicated a wide-spread planning for another revolution in Mexico.

Texas Rangers, a body of armed and mounted men constituting a combined military and constabulary force. It has been in existence for many years; is made up of carefully selected men; and has many deeds of extraordinary daring credited to its memory. As the name implies, this body ranges over the State in the performance of its unique work, at one time assisting the officers of the law in their duties, at others defending the Rio Grande border against raiding cattle thieves from Mexico, and at others suppressing riots and other disturbances of the peace. The best idea of the peculiar functions of this body is obtained from a report of its operations in the single month of December, 1897, when the members made forty arrests for various crimes; were sent on seventy scouting expeditions; assisted sheriffs forty-seven times; guarded jails nine times; attended district courts thirty-four times; made nine attempts to arrest that failed; and travelled 4,843 miles.

Texas University. The Congress of the Republic of Texas in 1839 provided for a general system of education with a university to be located at Austin, with a grant of 221,400 acres "for the establishment and endowment of two colleges or universities," and in 1858 appropriated \$100,000 in United States bonds, and a further endowment of 3,200,000 acres of land, part of which was subsequently diverted to establish common schools. The main university was opened to the admission of students Sept. 15, 1883.

Textile Fabrics. The difficulty of paying for imported goods in Massachusetts, about 1640, stimulated the people to new kinds of industry. Among other things, cotton and woollen cloths were manufactured. The cultivation of hemp and flax was successfully undertaken. Vessels were sent to the West Indies for cotton, and, at Rowley, where a colony of Yorkshire clothiers had recently settled, the fabrication of linen, woollen, and cotton cloth was set on foot. The first cotton factory in the United States was started in Beverly, Mass., in 1789, by a company which only succeeded in *introducing* that

industry, with very imperfect machinery. A woollen factory was in operation in Hartford, Conn., in 1789, and in 1794 one was established in Byfield, Mass. The same year a carding-machine for wool was first put into operation in the United States. It was constructed under the direction of John and Arthur Schofield. SAMUEL SLATER (*q. v.*) may be considered the father of cotton manufacturing in the United States. But his operations were only in spinning the yarn. It remained for a citizen of the United States, Francis C. Lowell, a merchant of Boston, to introduce the weaving of cotton cloth here. He invented a power loom, and in 1812 he and Francis S. Jackson erected a mill in Waltham, Mass. The machinery was constructed by Paul Moody. After many failures and alterations, they succeeded in perfecting looms that worked well, and in 1813 they had also a spinning-wheel, with 1,300 spindles. Slater's Rhode Island mill had then only 144 spindles.

Statistics.—In 1911 the Bureau of the Census issued a tentative summary of the combined textiles industry of the United States which showed the following aggregates; number of establishments under the factory-system classification, 4,820; salaried employes, 27,881; wage-earners, 833,749; capital, \$1,709,265,000; salaries and wages, \$349,193,000; cost of materials used, \$947,676,000; miscellaneous expenses, \$102,357,000; and value of products, \$1,592,482,000. Cotton manufactures had \$821,109,000 capital, and products valued at \$629,699,000; hosiery and knit goods, \$163,641,000 capital and \$200,143,000 products; woollen goods, \$506,323,000 capital and \$507,219,000 products; silk goods, \$144,799,000 capital and \$196,475,000 products; and cordage, twine, jute, and linen goods, \$73,393,000 capital and \$58,946,000 products. See COTTON INDUSTRY; WOOL INDUSTRY.

Thacher, JAMES, physician; born in Barnstable, Mass., Feb. 14, 1754; joined the Continental army at Cambridge in 1775, and served through the war as surgeon, being present at many of the prominent battles in the North. He kept a diary, and in 1824 published a *Military Journal of the Revolution*, a work of great historical value. He was author, also, of several other works, scientific, philosophi-

THACHER—THAMES

cal, and historical. He died in Plymouth, Mass., May 26, 1844.

Thacher, JOHN BOYD, author; born in Ballston, N. Y., Sept. 11, 1847; graduated at Williams College in 1869; served in the State Senate in 1884-85, where he introduced measures which later resulted in the reform of the tenement-house construction and management; was mayor of Albany in 1886-87 and 1896-97; was appointed by President Harrison a member of the World's Columbian Exposition Commission, and became chairman of its bureau of awards. He wrote *The Continent of America*; *The Cabotian Discovery*; *Christopher Columbus*, etc. He died in Albany, N. Y., Feb. 25, 1909.

Thames, BATTLE OF THE. When General Harrison landed his invading army near Fort Malden, Canada, in 1813, General Proctor, in command of the British troops there, fled northward, leaving the fort, navy buildings, and store-houses in flames. Proctor had impressed into his service all the horses of the inhabitants to facilitate his flight. Harrison wrote to the Secretary of War (Sept. 27): "I will pursue the enemy to-morrow, although there is no probability of overtaking him, as he has upwards of 1,000 horses and we have not one in the army. I shall think

myself fortunate to collect a sufficiency to mount the general officers." Harrison did pursue. On Oct. 1 he was joined by Col. Richard M. Johnson, with his cavalry, at Sandwich. There a council of officers was held. Only two lines of pursuit were feasible—one by Lake Erie to Long Point, the other by land to the rear of the fugitives. The latter was chosen. McArthur and his brigade were left to hold Detroit; Cass's brigade and Ball's regiment were left at Sandwich, and 3,500 men, mostly Kentucky volunteers, started in pursuit towards Chatham, on the Thames River, where, it was ascertained, Proctor had encamped. General Cass accompanied Harrison as volunteer aide.

Learning that some small vessels containing the enemy's artillery and baggage were escaping on Lake St. Clair towards the mouth of the Thames, Commodore Perry despatched a portion of his fleet, under Captain Elliott, in pursuit. Perry soon followed in the *Ariel*, accompanied by the *Caledonia*. The little squadron reached (Oct. 2) the mouth of the Thames, with the baggage, provisions, and ammunition wagons of the Americans, but the vessels of the enemy had escaped up that stream. Harrison pressed forward rapidly, along the border of the lake and

APPEARANCE OF THE THAMES BATTLE-GROUND IN 1860.

THAMES, BATTLE OF THE

up the Thames. Three of Perry's armed vessels also went up the river as convoys to transports. The British had encamped at Dolsen's—700 white men and 1,200 Indians—but on the approach of Harrison they continued their flight, Tecumseh cursing Proctor for his cowardice. The former boasted of the victory he should win, but kept on retreating, destroying bridges and other property in his flight, burning his own vessels and leaving arms behind. At last the pursuit was so sharp and close that Proctor was compelled to make a stand on the bank of the Thames, near the Moravian town, his left on the river, where the bank is high and precipitous, and on his right a marsh, running almost parallel with the river for about 2 miles. The space between was covered with woods, with very little undergrowth.

The British regulars were formed in two lines between a smaller swamp and the river, their artillery being planted in the road, near the bank of that stream. The Indians were posted between the two swamps, and so disposed as easily to flank Harrison's left. They were commanded by Tecumseh, assisted by Oshawahnah, a brave Chipewewa chief. Harrison's force was now little more than 3,000 in number, composed of 120 regulars, five brigades of Kentucky volunteers, under Governor Shelby, and Colonel Johnson's regiment of mounted men. Harrison attacked (Oct. 5), and a severe battle ensued. Tecumseh was slain, and his amazed followers, who had fought desperately, broke and fled to the shelter of the swamp. The whole British force was speedily vanquished, and most of them were made prisoners. Proctor escaped in a carriage, with his personal staff, a few dragoons, and mounted Indians, hotly pursued some distance by Johnson and his horsemen. He made his way to the western end of Lake Ontario, and there his military career was ended. Censured by his superiors, rebuked by the Prince Regent,

and scorned by honorable men for his career of cruelty and cowardice in America, Proctor sank into merited obscurity.

Harrison's victory was complete. The whole country resounded with his praises. Congress gave him and Shelby the thanks

OSHAWAHNAH.*

of the nation and each a gold medal. At the battle of the Thames six brass cannon taken from Hull at Detroit were recovered, on two of which were engraved the words, "Surrendered by Burgoyne at Saratoga." These may now be seen at West Point. The loss in this short but decisive battle is not exactly known. It

* This picture is from a photograph from life of Tecumseh's lieutenant at the battle of the Thames, taken at Brantford, Canada, in September, 1858, when he was attending a grand council there. In that council he appeared with all his testimonials of bravery—his "stars and garters"—as seen in the picture. Around his hat was a silver band. He also displayed a silver gorget, medals, etc., a sash of bead-work, strings of wampum, and an ornamented tomahawk pipe. He was then about ninety years of age. He had been a famous warrior—the hero of fifteen battles.

THANKSGIVING DAY—THATCHER

lasted only about fifteen minutes. The Americans lost about forty-five killed and wounded; the British forty-four, besides 600 made prisoners. Harrison had recovered all that Hull had lost. He had gained much. He had subdued western Canada, broken up the Indian Confederacy, and ended the war on the northwestern border of the Union. The frontier being secured, Harrison dismissed a greater portion of the volunteers. Leaving General Cass (whom he had appointed civil and military governor of Michigan) in command of a garrison at Detroit, composed of 1,000 regulars, he proceeded (Oct. 23) with the remainder of his troops to Niagara, to join the Army of the Centre. For some unexplained reason General Armstrong, the Secretary of War, treated Harrison so badly that the latter left the army, and the country was deprived of his valuable services at a most critical time. See HARRISON, WILLIAM HENRY.

Thanksgiving Day. The first recorded public thanksgiving appointed by authority, in America, was proclaimed in Massachusetts Bay, Feb. 6, 1631. Owing to the great scarcity of provisions and consequent menace of starvation, Feb. 22 was appointed to be observed as a fast-day. Before that time a long-expected vessel arrived, laden with provisions, and the fast-day was changed into one of thanksgiving. The practice was sometimes observed in New Netherland. Governor Kieft proclaimed a public thanksgiving, to be held in February, 1644, on account of a victory over the Indians; and again, in 1645, because of the conclusion of peace. Thanksgivings and fasts, sometimes general and sometimes partial, were appointed in the several colonies, and early in the Revolutionary War the Continental Congress adopted the practice. The days appointed during the war were as follows: Thursday, July 20, 1775; Friday, May 17, 1776; and another, to be fixed by the several States, ordered by resolution, Dec. 11, 1776; Wednesday, April 22, 1778; Thursday, May 6, 1779; Wednesday, April 6, 1780; Thursday, May 3, 1781; Thursday, April 25, 1782. These eight several appointments of thanksgiving days were made by the Continental Congress, in the form of recommendations to the executive heads of the several State governments,

reciting the occasion which prompted the observance. With only one exception, Congress suspended business on the days appointed for thanksgiving.

Washington issued a proclamation for a general thanksgiving by the Continental army on Thursday, Dec. 18, 1777; and again, at Valley Forge, May 7, 1778. As President, Washington appointed Thursday, Nov. 26, 1789, a day for general thanksgiving throughout the Union; also Thursday, Feb. 19, 1795. Successive Presidents of the United States were moved to do likewise, from time to time. The *Book of Common Prayer*, revised (1789) for the use of the Protestant Episcopal Church in America, directed the first Thursday of November (unless another day be appointed by the civil authorities) "to be observed as a day of thanksgiving to Almighty God for the fruits of the earth," etc. In New England, especially, a day of thanksgiving has been annually celebrated for a century and more, and made the occasion for family reunions. The custom gradually extended to other States, and for several years the President of the United States has issued a proclamation for a day of public thanksgiving throughout the Union—usually the last Thursday in November—and the State executives have chosen the same day, so that the custom is now general. Thanksgiving Day is now a legal holiday.

Tharja, ROBERT SEYMOUR SYMMES, lawyer; born in Magnolia, S. C., Jan. 10, 1830; graduated at the College of Charleston in 1857 and at the Law Department of the University of New York in 1859; was strongly in favor of the Union prior to the Civil War, and owing to his opinions was attacked by a mob in 1861. He fled to Cincinnati; afterwards settled in Richmond, Ind.; and served in the Union army in 1861-62. In 1888 he declined a nomination, by the Industrial Conference in Washington, for President of the United States; and was later engaged in the auditor's office in Washington. His publications include *Arbitrary Arrests in the South*; and *Letters on the Political Situation*.

Thatcher, BENJAMIN BUSSEY, author; born in Warren, Me., Oct. 8, 1809; graduated at Bowdoin College in 1826; studied law and was admitted to the bar, but

THATCHER—THAYER

turned his attention to literary work. He was the author of *Biography of North American Indians*; *Memoir of Phillis Wheatley*; *Memoir of S. Osgood Wright*; *Traits of the Boston Tea-party*; *Traits of Indian Manners, etc.*; and *Tales of the American Revolution*. He died in Boston, Mass., July 14, 1840.

Thatcher, HENRY KNOX, naval officer; born in Thomaston, Me., May 26, 1806; grandson of Gen. Henry Knox; entered the navy in 1823; was made captain in 1831, and commodore in July, 1862. In 1862-63 he commanded the Mediterranean Squadron, and was in command of the steam-frigate *Colorado*, of the North Atlantic Squadron, in both attacks on Fort Fisher. He afterwards commanded the West Gulf Squadron, and assisted General Canby in the reduction of Mobile. On May 10, 1865, Thatcher received the surrender of the Confederate naval forces at Mobile and on the Alabama River. In July, 1866, he was made rear-admiral, and in May, 1868, retired. He died in Boston, Mass., April 5, 1880.

Thayer, ELI, educator; born in Mendon, Mass., June 11, 1819; graduated at Brown College in 1845; established the Oread Institute, Worcester, Mass., in 1848; member of the legislature in 1853-54, during which period he organized and founded the Emigrant Aid Company and endeavored to unite the North in favor of his scheme to send into Kansas anti-slavery settlers. His company founded Topeka, Lawrence, Manhattan, and Ossawatimie, of which places Gov. Charles Robinson said: "Without these settlements Kansas would have been a slave State without a struggle; without the Aid Society these towns would never have existed; and that society was born of the brain of Eli Thayer." Mr. Thayer was a member of Congress in 1857-61. He invented an automatic boiler cleaner, an hydraulic elevator, and a sectional safety steam-boiler. His publications include a history of the Emigrant Aid Company; several lectures; a volume of his speeches in Congress; and the *Kansas Crusade*. He died in Worcester, Mass., April 15, 1899.

Thayer, MARTIN RUSSELL, jurist; born in Petersburg, Va., Jan. 27, 1819; graduated at the University of Pennsylvania in 1840; admitted to the bar in 1842; mem-

ber of Congress in 1863-67; judge of the district court of Philadelphia in 1867-96. He was author of *The Duties of Citizenship*; *The Great Victory: Its Cost and its Value*; *The Battle of Germantown*; *The Philippines: What is Demanded of the United States by the Obligations of Duty and National Honor*, etc. He died in Philadelphia, Pa., in 1906.

Thayer, SIMEON, military officer; born in Mendon, Mass., April 30, 1737; he served with the Rhode Island troops in the French and Indian War, and in 1757 in the Massachusetts line, under Colonel Frye and Rogers the Ranger. He was taken prisoner in 1757 at Fort William Henry. He accompanied Arnold in his famous expedition to Quebec (1775), and was made prisoner; but was exchanged in July, 1777, and was prominent in the defence of Red Bank and Fort Mifflin, where he was major. He was wounded in the battle of Monmouth; served in New Jersey in 1780, and in 1781 retired from the service. He left a *Journal of the Invasion of Canada in 1775*, which was published in 1867. He died in Cumberland, R. I., Oct. 14, 1800.

Thayer, SYLVANUS, military officer; born in Braintree, Mass., June 9, 1785; graduated at Dartmouth College in 1807 and at West Point in 1808, entering the corps of engineers. He was chief engineer of Dearborn's army in 1812, and of Hampton's division in 1813. He was chief engineer in the defence of Norfolk, Va., in 1814. In 1815 he was sent with Colonel McRae to Belgium and France to examine the fortifications there; and from 1817 to 1833 he was superintendent at West Point, and established the academy on its present basis. In 1838 he was made lieutenant-colonel, and from 1833 to 1857 was constructing engineer of the defences of Boston Harbor, and temporary chief of the engineer corps from 1857 to 1859. He was commissioned colonel in March, 1863; brevetted brigadier-general in May; and resigned June 1. He died in South Braintree, Mass., Sept. 7, 1872.

Thayer, WILLIAM MAKEPEACE, author; born in Franklin, Mass., Feb. 23, 1820; graduated at Brown University in 1843; later studied theology; was in charge of the Orthodox Congregational Church, Ashland, Mass., in 1849-57; and subse-

THEKAKISQUI—THEOCRACY

quently applied himself to literary work; returned to Franklin in 1858; member of the legislature in 1857 and 1863; and secretary of the Massachusetts Temperance Alliance in 1860-76. He was author of *Character and Public Service of Abraham Lincoln*; *Marvels of the New West*; *Youth's History of the Rebellion*; *From Tannery to the White House*; *From Log Cabin to the White House*, etc. He died in Franklin, Mass., April 7, 1898. •

Thekakisqui, Iroquois chief; born in central New York in 1756; was made a chief in 1776; gave considerable aid to the British in the Revolutionary War; commanded a band of Indians who laid waste parts of the Carolinas with fire and sword. In 1794 he turned over to the United States government a part of the lands of his tribe. Under his leadership his people made progress in the science of agriculture and civilization. He died in 1802.

Theatres in the United States. The first recorded theatrical performance in North America was by amateurs, at Quebec, in 1694. The first in English was in the island of Jamaica in 1745. The first English play in New England was "The Orphans," given by amateurs at the Coffee-house in State Street, Boston, in 1749; but a law of 1750 forbade such performances, fining spectators and actors £5 each, etc. The first theatre in the Colonies opened at Williamsburg, Va., with *The Merchant of Venice*, by an English company under Lewis Hallam, Sr., Sept. 5, 1752.

First brick theatre in U. S. erected at Annapolis, Md., and opened with "The Beaux' Stratagem" 1753
First theatre in New York City opened in Nassau Street; play, "The Conscious Lovers" Sept. 17, "
Warehouse fitted as a temporary theatre in an alley above Pine Street, Philadelphia, Pa.; first play, "The Fair Penitent" April, 1754
First performance by professional actors in New England at a temporary theatre in Newport, R. I.: "The Provoked Husband," given, in spite of prohibition by a town meeting Sept. 7, 1761
New theatre built in Chapel Street, New York City, wrecked during a riot caused by the Stamp act. March, 1765
John Street Theatre, New York City, opened with "The Stratagem," Dec. 7, 1767
First Theatre in Albany, N. Y., opened with "Venice Preserved," July 3, 1769
First theatre built in Charleston, S. C., by Mr. Douglas Sept., 1773

"The American Company," under Lewis Hallam, Jr., leave for the West Indies, the Continental Congress advising that all public amusements be suspended Oct. 24, 1774
"Contrast," a comedy in five acts containing the first Yankee part for the stage, the first play written by an American (Royal Tyler, chief-justice of Vermont) and acted by professionals, at John Street Theatre, New York, by the old American company, April 16, 1786
First theatre in Baltimore, Md., opened by Hallam and Henry Aug. 16, "
"The Father of an Only Child," the first accepted play of William Dunlap, the earliest American professional dramatist, produced Sept. 7, 1789
"New Exhibition Room," in Broad Alley, near Hawley Street, Boston, a theatre, opened Aug. 16, 1792
First theatrical riot in Boston, players giving "Douglas" and "The Poor Soldier" as "Moral Lectures," being arrested "
Massachusetts repeals the law against the theatre 1793
First regular theatre in Boston opens in Federal Street, with "Gustavus Vasa" and "Modern Antiquities" (burned 1798) Feb. 4, 1794
First theatre in Hartford, Conn., opened by Hodgkinson, with part of the old American company 1796
First theatre in Providence, R. I., opened by part of same company. "
"Starring" begun in the U. S. by T. A. Cooper 1800
"United States Theatre," first in Washington, D. C., opened by Wignell. "
First theatre in New Orleans built by a company of French comedians 1809
Theatre in Richmond, Va., destroyed by fire during the performance; 70 killed Dec. 26, 1811
First regular theatre in Cincinnati opened 1815
First Park Theatre, New York City, opened, 1798; burned, 1820; second Park Theatre opened 1821
First American theatre in New Orleans, built by James H. Caldwell, opened with "The Dramatist" 1823
First theatre in St. Louis, built by James H. Caldwell, opened with "The Honeymoon" June 30, 1827
First brick theatre in Pittsburgh, Pa., opened with the "Busy Day" Sept. 2, 1832
Eagle Street Theatre, Buffalo, N. Y., opened July 21, 1835
"Christy's Minstrels," organized by E. P. Christy at Buffalo, N. Y. 1842
Astor Place Opera-house opened, Nov. 22, 1847
[The scene of the Macready riot, evening of May 10, 1849, when Macready attempted to play "Macbeth." New York City.]
Assassination of President Lincoln, at Ford's Theatre, Washington, D. C., by J. Wilkes Booth April 14, 1865
Conway's Brooklyn Theatre, Brooklyn, N. Y., burned; 295 lives lost Dec. 5, 1876

Theocracy. In 1631 the government of Massachusetts was made a theocracy. In May of that year the General Court decreed that no man should be a "freeman"—a citizen and voter—unless he were a

THEOLOGY—THEOSOPHY

member of some colonial church. To become such was to submit to the most rigid tests of his purity of life and his orthodoxy in religion. The magistrates and General Court were aided by the clergy, and they jointly exercised a supreme control in temporal as well as spiritual matters. The clergy were always consulted in matters purely temporal. They were maintained at the public expense, for which the people were taxed; and by the joint influence of the clergy and magistrates many severe laws were enacted, sumptuary and otherwise. Men were whipped, their ears were cropped, or they were banished for "slandering the government or the churches, or for writing letters in disparagement of the authorities in Church and State." The system of manners during the reign of this tyrannous theocracy was very austere. Gravity was a sign of holiness; all amusements were proscribed; gayety seemed to be regarded as sin; religious lectures on weekdays were so frequent that their attendance imposed a heavy burden on the industry of the people, who went from town to town to hear them. There was a rigid fast in spring, answering to Lent, and a thanksgiving at the close of autumn. The observance of Christmas and other holidays of the Roman Catholic and English Churches was denounced, and came to be regarded by the people as idolatrous. Even the eating of mince-pies on Christmas was discontinued. This tyrannous theocracy prevailed in Massachusetts with increasing strength for fully fifty years, until the chain was gradually removed by enlightenment. "It seemed like an attempt to establish a vast Puritan monastery, with freedom only in marrying and money-making." See ARISTOCRACY.

Theology. SCHOOLS OF. In the school-year 1909-10, the number of schools of theology reporting to the United States Commissioner of Education was 184; enrollment in all schools, 11,012, including 491 women; graduates of the year 1,759, including 33 women; income of the year, \$3,356,500, including \$1,431,028 in benefactions. The famous Andover Theological Seminary, founded at Andover, Mass., in 1807, became affiliated with Harvard University, but preserving its autonomy, in 1908.

Theondechoren. JOSEPH, Indian convert; embraced Christianity in 1641, and became a fervent preacher; took part with the Iroquois in an attack on Quebec, where he was wounded, but escaped to the woods. He was captured by hostile Indians, who were so influenced by his preaching that they nursed him back to health. In 1649, when the Hurons were forced to leave their country, he went to live on St. Joseph's Island, but subsequently, with a number of his countrymen, settled near Quebec. He died near Tadoussac, Canada, June 26, 1652.

Theosophy, a name derived from the Greek word *theosophia*, divine wisdom. The subject of theosophical study is professedly to understand the nature of divine things. It differs, however, from both philosophy and theology, even when these have the same object of investigation. For in seeking to learn the divine nature and attributes, philosophy employs the methods and principles of natural reasoning; theology uses these, adding to them certain principles derived from revelation. Theosophy, on the other hand, professes to exclude all reasoning processes as imperfect, and to derive its knowledge from direct communication with God himself. It does not, therefore, accept the truths of recorded revelation as immutable, but as subject to modification by later direct and personal revelations. The theosophical idea has had followers from the earliest times. Since the Christian era we may class among theosophists such sects as Neoplatonists, the Hesychasts of the Greek Church, the Mystics of mediæval times, and, in later times, the disciples of Paracelsus, Thalhauser, Böhme, and others.

Theosophical Society.—The Theosophical Society was founded in New York City on Nov. 17, 1875, by Mme. H. P. Blavatsky and Col. Henry S. Olcott, but its headquarters were removed in 1879 to Adyar, Madras, India. Its objects are three: (a) To form a nucleus of the Universal Brotherhood of Humanity, without distinction of race, creed, sex, caste, or color; (b) to encourage the study of comparative religion, philosophy, and science; (c) to investigate unexplained laws of nature and the powers latent in man. It has now eleven territorial sections, each presided over by a general secretary: America,

THERMOPYLAE OF AMERICA—THOMAS

Great Britain, India, Scandinavia, Holland, Hungary, France, Italy, Germany, Australia, and New Zealand. During the 34 years of its existence it has admitted about 28,000 members and chartered over 750 branches. The membership at present of the American section is about 3,000; there are 114 branches. Reincarnation and Karma are the basic stones of the theosophical system. The president, Mrs. Annie Besant, resides at the Adyar headquarters. Weller Van Hook, 103 State Street, Chicago, Ill., is the general secretary.

Universal Brotherhood.—The Universal Brotherhood and Theosophical Society, founded by Mme. Blavatsky in New York, 1875, continued after her death under the leadership of the cofounder, William Q. Judge, and now, under the leadership of their successor, Katherine Tingley, has its international headquarters at the world's theosophical centre, Point Loma, Cal. The secretary-general is Frank M. Pierce. This organization declares that brotherhood is a fact in nature. The principal purpose of the organization is to teach brotherhood, demonstrate that it is a fact in nature, and make it a living power in the life of humanity, establishing Raja Yoga schools throughout the world and creating a new literature. Its subsidiary purpose is to study ancient and modern religion, science, philosophy, and art, to investigate the laws of nature and the latent divine powers in man. It declares in its constitution that every member has a right to believe or disbelieve in any religious system or philosophy, each being required to show that tolerance for the opinions of others which he expects for his own.

Thermopylae of America, a phrase applied to Fort Alamo, Tex.; in allusion to the heroic defence of it in 1836. See ALAMO, FORT; TEXAS.

Third-Termism, in United States history, a phrase that relates to the efforts of the friends of General Grant to procure for him a third term in the Presidency. These efforts led to the division of the Republican party into two sections, known as "Stalwarts" and "Half-Breeds." The opponents of the movement produced an interesting array of historical facts to prove that the sentiment of the country

had ever been against a third Presidential term.

Thomas, ALLEN CLAPP, historian; born in Baltimore, Md., Dec. 26, 1846; graduated at Haverford College in 1865; became professor of history, and librarian of Haverford College in 1878. He is the author of *A History of the United States for Schools and Academies*; *An Elementary History of the United States*; *History of the Society of Friends in America*, etc.

Thomas, CYRUS, ethnologist; born in Kingsport, Tenn., July 27, 1825; was admitted to the bar and practised till 1865; became assistant on the United States geological and geographical surveys of Territories in 1869; accepted the chair of natural sciences at the Southern Illinois Normal University in 1873; appointed archaeologist to the United States Bureau of Ethnology in 1882. He was author of *The Cherokees and Shawnees in Pre-Columbian Times*; *Mound Explorations of the Bureau of Ethnology*; *Prehistoric Works East of the Rocky Mountains*; *Introduction to American Archaeology*; *Indians of North America in Historic Times*; *Prehistoric North America*, etc. He died in Washington, D. C., June 26, 1910.

Thomas, GEORGE HENRY, military officer; born in Southampton county, Va., July 31, 1816; graduated at West Point in 1840, and entered the artillery. He served in the Seminole War; was with General Taylor in the war with Mexico; and again fought the Seminoles in Florida in 1849-50. From 1851 to 1854 he was instructor of artillery at West Point, and was made major of cavalry in May, 1855. From 1856 to 1860 he served in Texas, and in a fight with the Indians near Brazos River was wounded. He was promoted colonel of the 5th Cavalry (Col. Robert E. Lee's old regiment) in May, 1861; and, having served awhile in the vicinity of the upper Potomac, was made brigadier-general of volunteers in August. From November, 1861, till March, 1862, he commanded a division of the Army of the Ohio, defeating the Confederates in the battle of MILL SPRING (*q. v.*) in January. At Corinth, Miss., he commanded the right wing of the Army of the Tennessee, and was second in command of the Army of the Ohio at Perryville in October. For nearly

THOMAS

a year from November, 1862, he commanded the 14th Corps of the Army of the Cumberland, doing eminent service in the battles of STONE RIVER and CHICKAMAUGA (*qq. v.*). In October, 1863, he

GEORGE HENRY THOMAS.

was placed in command of the Department and Army of the Cumberland, and was promoted brigadier-general, United States army. He was in the battle of MISSIONARY RIDGE (*q. v.*), and did signal service in the Atlanta campaign, when he took post at Nashville and defended Tennessee against the invasion of Hood. For this service he was made a major-general, and received the thanks of Congress, and from the legislature of Tennessee a gold medal. In February, 1868, he was offered the brevet of lieutenant-general by President Johnson, but he declined to receive it. He died in San Francisco, Cal., March 28, 1870. On Nov. 19, 1879, an exquisitely wrought equestrian statue of General Thomas, in design and execution by J. Q. A. Ward, was unveiled at the national capital, with very imposing ceremonies, such as had never been seen there before.

Thomas, ISAAC, scout; born in Virginia about 1735; settled among the Cherokee Indians in 1755. He warned Gen. John Sevier and James Robertson at Watauga, Va., on May 30, 1776, of an intended attack by the Indians. About the middle of July he joined the small force of forty in the fort at Watauga, and with them

repulsed the assault of Oconosta. Later he led the party that invaded the Indian country. He was guide to General Sevier for twenty years in almost all of his numerous movements against the Creeks and Cherokees. He died in Sevierville, Tenn., in 1819.

Thomas, ISAIAH, printer; born in Boston, Mass., Jan. 19, 1749; was apprenticed to a printer seven years, and started business for himself in Newburyport, Mass., when he was eighteen years of age. In 1770 he transferred his printing establishment to Boston, and on July 17, 1771, began the publication of the *Massachusetts Spy*, which became the champion of the colonies contending for right and justice. The government tried to suppress it, but in vain. After the skirmish at Lexington (April 19, 1775) he transferred his establishment to Worcester, where he continued to publish the *Spy* until 1801, when it was continued by his son from that time until 1819. Enterprising in business, he established a book-store in Boston in 1788 with Mr. Andrews, and they established branches of their publishing business in various places. They published the *Massachusetts Magazine* from 1789 to 1796, and the *New England Almanac* forty-two years—from 1775. For many years the Bibles and school books used in the English colonies, and in the States afterwards, were issued from Thomas's press at Worcester. He printed several editions of the Bible. In 1791 he issued a folio edition, with copper-plates, and another, in quarto, with a concordance; and in 1793 an edition in octavo; and in 1797 another in duodecimo. Thomas says Isaac Collins printed, at Trenton, N. J. (where he was State printer), "a handsome and very correct octavo edition of the Bible." Collins also printed a quarto edition. In 1812 Mr. Thomas founded the American Antiquarian Society in Worcester; provided a building for its use on his grounds; gave it nearly 8,000 books and a most valuable series of newspapers; and bequeathed to it the land on which the hall was built. He also made a provision for the maintenance of the library and museum equal to about \$24,000. Mr. Thomas wrote and published (1810) a valuable *History of Printing*. He died in Worcester, Mass., April 4, 1831.

THOMAS—THOMPSON

Thomas, JANE, heroine; born in Chester county, Pa., in the eighteenth century; wife of Col. John Thomas, of the South Carolina Spartan Regiment. Prior to the Revolutionary War Colonel Thomas, learning that a large party of Tories was on the way to seize the ammunition that Gov. John Rutledge had left in his charge, fled, carrying with him a part of the powder. Two men and two women, one of whom was Mrs. Thomas, remained in charge of the house. When the place was attacked the woman loaded the gun while the men kept up an incessant firing till the enemy withdrew. It was said that the ammunition thus saved was the main supply for the troops of Sumter during the skirmishes around Hanging Rock and Rocky Mount.

Thomas, JOHN, military officer; born in Marshfield, Mass., in 1725; was a practising physician, and was surgeon in the provincial army sent to Nova Scotia in 1746. In 1747 he was on Shirley's medical staff, and in 1759 he became colonel of a provincial regiment. He commanded a regiment under Amherst and Haviland in 1760 in the capture of Montreal. Colonel Thomas was one of the most active Sons of Liberty in Massachusetts; was appointed brigadier-general by Congress in 1775; commanded a brigade during the siege of Boston, and after the evacuation was sent to take command of the American troops in Canada. He joined the army before Quebec May 1, 1776, and died in Chambly, June 2, 1776.

Thomas, LORENZO, military officer; born in Newcastle, Del., Oct. 26, 1804; graduated at West Point in 1823; served in the Seminole War and in the war with Mexico; and in May, 1861, was made adjutant-general, with the rank of brigadier-general, which office he held throughout the Civil War. In 1863 he was engaged in organizing colored troops in the South. He was brevetted major-general, United States army, in 1865, and retired in 1869. He died in Washington, D. C., March 2, 1875. See **JOHNSON, ANDREW**.

Thomas, PHILIP FRANCIS, statesman; born in Easton, Md., Sept. 12, 1810; admitted to the bar, 1831; member of the State legislature, 1838 and 1843-45; member of Congress, 1839-41; governor of Maryland, 1848-51; United States Secre-

tary of the Treasury, 1860-61; member of Congress, 1875-77. He died in Baltimore, Md., Oct. 2, 1890.

Thomas, THEODORE, musician; born in Esens, Hanover, Germany, Oct. 11, 1835; received his musical education principally from his father, with whom he came to the United States in 1845. He organized the world-famed orchestra in New York, which he conducted till 1888. He was director of the Cincinnati College of Music in 1878-81; conductor of the Cincinnati musical festivals, 1873-98; and of the American Opera Company in 1885-87. He removed to Chicago, Ill., in 1891, to conduct the Chicago orchestra; and was musical director of the World's Columbian Fair. He died in Chicago, Ill., Jan. 4, 1905.

Thompson, ALEXANDER RAMSEY, military officer; born in 1790; graduated at the United States Military Academy in 1812; served in the War of 1812, taking part in Gen. James Wilkinson's expedition down the St. Lawrence, in the defence of Plattsburg, and in other operations on Lake Champlain; promoted captain of infantry in 1814; became major in 1832, and lieutenant-colonel in 1837; served in the war with the Seminole Indians; and was killed in the battle of Okeechobee, Dec. 25, 1837.

Thompson, ALFRED WORDSWORTH, artist; born in Baltimore, Md., May 26, 1840; studied art in Paris, France; settled in New York in 1863; became an associate of the National Academy of Design in 1873, and a member of the Society of American Artists in 1878. His paintings include, *Desolation*; *Annapolis in 1776*; *Review at Philadelphia, 1777*; *The Advance of the Enemy*; *The Departure for the War, 1776*, etc. He died in Summit, N. J., Aug. 28, 1896.

Thompson, SIR BENJAMIN. See **RUMFORD**.

Thompson, DANIEL PIERCE, author; born in Charlestown, Mass., Oct. 1, 1795; graduated at Middlebury College in 1820; admitted to the bar in 1823, and practised in Montpelier, Vt.; was register of probate in 1824; clerk of the legislature in 1830-33; and was appointed to compile the *Laws of Vermont from 1824 down to and including the year 1834*. He was judge of probate in 1837-40; clerk of the Su-

THOMPSON

preme and county courts in 1843-45, and Secretary of State in 1853-55. He was a popular lecturer; edited the *Green Mountain Freeman* in 1849-56; and was author of *The Green Mountain Boys*; *The History of Montpelier, 1781-1860*, etc. He died in Montpelier, Vt., June 3, 1868.

Thompson, DAVID, explorer; born in St. John, England, April 30, 1770; entered the employ of the Hudson Bay Company in 1789; later engaged in exploring expeditions. On April 27, 1798, he discovered Turtle Lake, from which the Mississippi River takes its southerly course to the Gulf. He explored the southern shore of Lake Superior in 1798; crossed the Rocky Mountains in 1807, and explored the whole length of Columbia River in 1811; was employed by Great Britain in surveying and laying out the boundary-line between the United States and Canada in 1816-26. He was the author of *Map of the Northwest Territory of the Province of Canada, made for the North-west Company in 1813-14*. He died in Longueuil, Canada, Feb. 16, 1857.

Thompson, EGBERT, naval officer; born in New York City, July 6, 1820; entered the navy in 1837; was attached to the South Sea Exploring Expedition, and was in all the operations of the home squadron in the war with Mexico. In the attacks on Fort Donelson and Island Number Ten he commanded one of the iron-clad gunboats; also in the attack on Confederate rams near Fort Pillow. He commanded the steamer *Commodore Macdonough* in the South Pacific Squadron in 1866-67; was promoted captain in 1867, and retired in 1874. He died in Washington, D. C., Jan. 5, 1881.

Thompson, ELIZABETH, philanthropist; born in Lyndon, Vt., Feb. 21, 1821; was the daughter of Samuel Rowell, a farmer, and at the age of nine went out to service. Her education was chiefly self-acquired. While on a visit to Boston in 1843 her remarkable beauty so attracted the attention of Thomas Thompson, a millionaire, that they were married within a year. At Mr. Thompson's death the entire income of his immense estate was left to her. She gave large sums of money to the cause of temperance and charity; provided \$10,000 for a thorough investigation of yellow fever in the South; founded the town of Long-

mont, at the foot of the Rocky Mountains, and gave 640 acres of land and \$300 to each colonist there. She contributed largely to the purchase of the Vassar College telescope; purchased and presented to Congress Francis B. Carpenter's painting of the *Signing of the Emancipation Proclamation by President Lincoln in the Presence of his Cabinet*, and for this was granted the freedom of the floor. She also contributed large sums to the American Association for the Advancement of Science, and was made its first patron. She died in Littleton, N. H., July 20, 1899.

Thompson, GEORGE, reformer; born in Liverpool, England, June 18, 1804; came to the United States at the request of William Lloyd Garrison to aid the abolition cause; addressed large meetings in the Northern States, and through his efforts 150 anti-slavery societies were formed. He was threatened by mobs several times, and once, when in Boston, escaped death by fleeing in a small boat to an English vessel, on which he sailed to England. His visit created much excitement and was denounced by President Jackson in a message to Congress. He revisited the United States in 1851, and again during the Civil War, when a public reception was given in his honor at which President Lincoln and his cabinet were present. In 1870 a testimonial fund was raised for him by his admirers in the United States and England. He died in Leeds, England, Oct. 7, 1878.

Thompson, HENRY ADAMS, educator; born in Stormstown, Pa., March 23, 1837; graduated at Jefferson College in 1858; and studied theology; professor of mathematics in Otterbein; Prohibition candidate for Congress in 1874, for lieutenant-governor of Ohio in 1875, for governor in 1877, and for Vice-President on the ticket with Neal Dow in 1880.

Thompson, JACOB, lawyer; born in Caswell county, N. C., May 15, 1810; graduated at the University of North Carolina in 1831. Admitted to the bar in 1834, he began the practice of law in Chickasaw county, Miss., in 1835. He was elected to Congress in 1839, and remained in that body until 1851. For several years he was chairman of the committee on Indian affairs, and he defended his adopted State when she repudiated her

THOMPSON—THOMSON

bonds. He was vehemently pro-slavery in his feelings, and was one of the most active disunionists in his State many years before the Civil War. He was Secretary of the Interior under President Buchanan, but resigned, Jan. 7, 1861, and entered into the services of the Confederacy. He was governor of Mississippi in 1862-64, and was then appointed Confederate commissioner in Canada. He died in Memphis, Tenn., March 24, 1885. See PEACE COMMISSION.

Thompson, JOHN, author; born in 1777. He was the author of articles published in the *Petersburg Gazette*, and signed "Cassia" and "Gracchus," in which he attacked President Adams's administration, and of letters signed "Curtiss," which were addressed to Chief-Justice John Marshall in 1798, and later published in book form. He died in Petersburg, Va., in 1799.

Thompson, LAUNT, sculptor; born in Abbeyleix, Queen's County, Ireland, Feb. 8, 1833; came to the United States in 1847; studied medicine and later drawing and modelling; and opened a studio in New York in 1858. Among his best-known works are statues of General Sedgwick, Winfield Scott, and Abraham Pierce, and busts of Edwin Booth, Bryant, and General Dix. He was vice-president of the National Academy of Design in 1874. He died in Middletown, N. Y., Sept. 26, 1894.

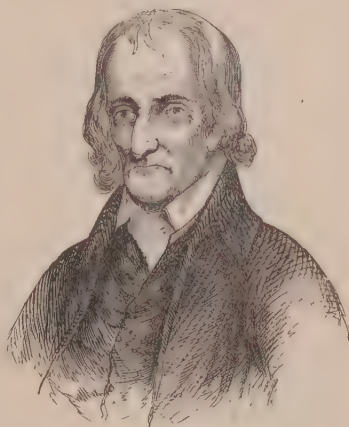

Thompson, RICHARD WIGGINTON, statesman; born in Culpeper county, Va., June 9, 1809; admitted to the bar in 1834; began practice in Bedford, Ind.; member of Congress in 1841-43 and in 1847-49, and Secretary of the Navy in 1877-81. He resigned in the latter year and became chairman of the American committee of the Panama Canal Company. His publications include *History of the Tariff and Recollections of Sixteen Presidents*. He died in Terre Haute, Ind., Feb. 9, 1900.

Thompson, SMITH, jurist; born in Stanford, N. Y., Jan. 17, 1768; graduated at Princeton in 1788; Secretary of the Navy, 1818-23; justice of the United States Supreme Court, 1823-43. He died in Poughkeepsie, N. Y., Dec. 18, 1843.

Thompson, ZOPC, geologist; born in Bridgewater, Vt., May 23, 1796; graduated at the University of Vermont in 1823; was appointed State geologist of

Vermont in 1845-48; accepted the chair of Chemistry and Natural History in the University of Vermont in 1851. He was the author of *Gazetteer of the State of Vermont*; *History of the State of Vermont to 1832*; *History of Vermont, Natural, Civil, and Statistical*; *Guide to Lake George, Lake Champlain, Montreal, and Quebec*; *Geography and Geology of Vermont*, etc. He died in Burlington, Vt., Jan. 19, 1856.

Thomson, CHARLES, patriot; born in Maghera, Ireland, Nov. 29, 1729; came to America in 1741; educated by the famous Dr. Allison, and became teacher in the Friends' school at Newcastle, Del. Afterwards making his home in Philadelphia, he was favored with the friendship of Dr. Franklin, and, taking an interest in the labors in behalf of the Indians by the Friendly Association, he attended Indian

CHARLES THOMSON

treaties. The Delawares adopted him with a name which signified "one who speaks the truth." As he was alighting from a carriage in Philadelphia with his Quaker bride—the possessor of a handsome fortune—a messenger came to him from the Continental Congress, just assembled, saying, "They want you at Carpenter's Hall to keep the minutes of their proceedings, as you are very expert at that business." Thomson complied, and he served in that capacity almost fifteen years. He was a

THOMSON—THORNTON

thorough patriot, and held the respect and confidence of all his associates. He had married, at the age of forty-five, Hannah Harrison, aunt of President Harrison. Thomson was an excellent classical scholar, and made a translation of the Old and New Testaments. He had gathered much material for a history of the Revolution, but destroyed it. He died in Lower Merion, Pa., Aug. 16, 1824.

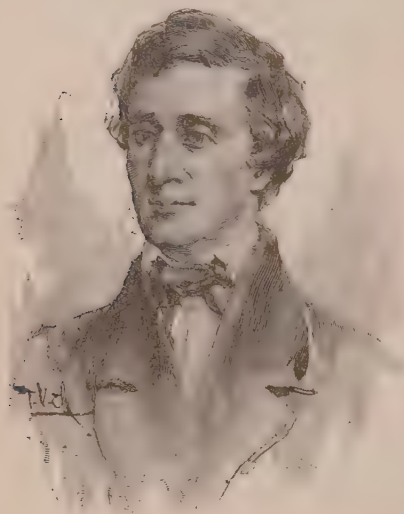

Thomson, ELIHU, electrician; born in Manchester, England, March 29, 1853; graduated at Central High School in 1870; appointed Professor of Chemistry in Central High School in 1870; connected with the Thomson-Houston and General Electric companies for the past twenty years. Mr. Thomson has patented many hundreds of inventions bearing upon electric welding, lighting, heating, and power. He was made an officer of the Legion of Honor by the French government in 1889. See **ELECTRICITY**.

Thoreau, HENRY DAVID, author; born in Concord, Mass., July 12, 1817; graduated at Harvard College in 1837; became

Emerson. His publications include *Resistance to Civil Government*; *A Week on the Concord and Merrimac Rivers*; *Walden, or Life in the Woods*; *The Maine Woods*; *Cape Cod*; *Letters to Various Persons*; *A Yankee in Canada*, etc. He died in Concord, Mass., May 6, 1862.

Thorfinn, Scandinavian navigator; born in Norway; sailed from Norway to Greenland with two vessels in 1006. In the same year he organized an expedition to sail for Vinland, which consisted of 160 men and women and three vessels. They were driven by wind and current to what is probably Newfoundland. They next reached Nova Scotia, and in looking for the grave of **THORVALD** (q. v.) are supposed to have sailed along the coast of New England. After passing Cape Cod two scouts were landed, who spent three days searching the country to the southwest, and then returned, bringing some ears of wheat and bunches of grapes. They spent the winter at what is either Nantucket or Martha's Vineyard, where they constructed booths, and during the spring cultivated the land and explored the country. Thorfinn then sailed for what is probably Mount Hope Bay and there founded a settlement. Here they first met the Eskimos, who then inhabited the country, and carried on a considerable trade with them. In the fall of 1009 a son was born to Thorfinn, who was in all probability the first child of European parents born within the present boundary of the United States. In the following winter the natives became hostile, and after combating them for some time Thorfinn returned to Norway, where he arrived in 1011, and was received with great honors. He died in Glæmbøland, Ireland, after 1016.

Thornton, SIR EDWARD, diplomatist; born in London, England, July 17, 1817; graduated at Cambridge University in 1840; was appointed minister to the United States in December, 1867; member of the joint high commission on the *Alabama* claims in 1871; member of the arbitration board of the American and Mexican claims commission in 1873; and of the board to arrange the boundaries of Ontario in 1878. He was transferred from Washington to St. Petersburg in May, 1881. Died in London, Jan. 26, 1906.

HENRY DAVID THOREAU.

a lecturer and writer, and was strongly opposed to slavery; was an intimate friend of Bronson Alcott and Ralph Waldo

THORNTON—THORVALD

Thornton, JAMES SHEPARD, naval officer; born in Merrimac, N. H., Feb. 25, 1826; entered the navy as midshipman in 1841; served in the sloop *John Adams* during the Mexican War; became a passed midshipman in 1846; and resigned from the navy in 1850. He was reinstated in 1854; promoted master in 1855; and lieutenant in 1855; served during the Civil War in the brig *Bainbridge*; was executive officer of the flag-ship *Hartford*; promoted lieutenant - commander in 1862; had charge of the gunboat *Winona* in the engagements at Mobile; executive officer of the *Kearsarge* in the fight with the *Alabama* off Cherbourg, and for his gallantry in this action was given a vote of thanks and advanced thirty numbers in his rank. He served in the navy-yard at Portsmouth, N. H., in 1866-67; promoted commander in 1866; and captain in 1872. He died in Germantown, Pa., May 14, 1875.

Thornton, JOHN WINGATE, historian; born in Saco, Me., Aug. 12, 1818; graduated at the Harvard Law School in 1840; was admitted to the bar and practised in Boston; was one of the originators of the New England Historic-Genecalogical Society. His publications include *Lives of Isaac Heath and John Bowles*, and of Rev. John Eliot, Jr.; *The Landing at Cape Anne, or the Charter of the First Permanent Colony on the Territory of the Massachusetts Company, now Discovered and First Published from the Original Manuscript*; *Ancient Pemaquid and Historic Review*; *Peter Oliver's "Puritan Commonwealth" Reviewed*; *The Pulpit of the American Revolution, or the Political Sermons of the Period of 1776, with an Introduction, Notes, and Illustrations*; *Colonial Schemes of Popham and Gorges*; *The Historical Relation of New England to the English Commonwealth*, etc. He died in Saco, Me., June 6, 1878.

Thornton, MATTHEW, a signer of the Declaration of Independence; born in Ireland in 1714; came to America in early life; was educated at Worcester, and became a physician in New Hampshire. He was in Pepperell's expedition against Louisburg in 1745 as a surgeon; presided over the New Hampshire Provincial Convention in 1775; and was a short time a delegate to the Continental Congress, taking his seat in November, 1776, when

he signed the Declaration. He was made chief-justice of the county of Hillsboro, and judge of the Supreme Court of the State. He was in both branches of the legislature, and in the council in 1785. He died in Newburyport, Mass., June 24, 1803.

Thornton, SETH BARTON, military officer; born near Fredericksburg, Va., in 1814; served in the Seminole War as second lieutenant of United States Dragoons, becoming first lieutenant in 1837 and captain in 1841; had command of a squadron in the Mexican War and exchanged the first shots with the enemy at La Rosia, April 25, 1846, in which engagement he was severely wounded and captured with the greater part of his force. At the close of Scott's campaign, while leading his squadron in advance of Worth's division at the village of San Augustin, he was shot dead, June 18, 1847.

Thorpe, FRANCIS NEWTON, author; born in Swampscott, Mass., April 16, 1857; studied at Syracuse University and at the University of Pennsylvania Law School; was fellow Professor of American Constitutional History at the University of Pennsylvania in 1885-98. He is the author of *The Government of the People of the United States*; *Franklin and the University of Pennsylvania*; *The Story of the Constitution*; *The Government of the State of Pennsylvania*; *The Constitution of the United States, with Bibliography*; *A Constitutional History of the American People, 1776-1850*; *The Constitutional History of the United States in 1765-1895*; and *A History of the United States for Junior Classes*, etc.

Thorpe, THOMAS BANGS, author; born in Westfield, Mass., March 1, 1815; received a collegiate education; settled in Louisiana in 1836 and devoted himself to literature; served in the Mexican War and was promoted colonel for meritorious services. His publications include *The Big Bear of Arkansas*; *Our Army of the Rio Grande*; *Our Army at Monterey*; *A Voice to America*; *Scenes in Arkansas*; *Reminiscences of Charles L. Elliott*, etc. He died in New York City in October, 1878.

Thorvald, ERICSSON, navigator; born in Scandinavia in the tenth century. In 1002 he selected a crew of thirty men and

THREE RIVERS—THURSTON

sailed westward. He is supposed to have reached what is now the coast of Rhode Island, and to have wintered near the present site of Providence. In the spring of 1003 he sailed southward and westward and anchored near what is supposed to be Cape Alderton. Here were sighted three canoes containing nine savages, eight of whom were slain. The ninth escaped, and on the following night brought back a large number of Eskimos, who appeared

the mouth of the Sorel. A British force took post at Three Rivers. General Sullivan sent General Thompson with Pennsylvania troops, led by St. Clair, Wayne, and Irvine, to attack the British there. Thompson was badly beaten, and he and Irvine, with 150 private soldiers, were made prisoners. This disaster discouraged Sullivan, and he was compelled to abandon Canada.

Thurman,

ALLEN GRANBERY, statesman; born in Lynchburg, Va., Nov. 13, 1813; practised law in Chillicothe, O., and became eminent at the bar; was a life-long Democrat. In 1845-47 he represented Ohio in the national House of Representatives, and in 1851-55 was a judge of the State Supreme Court. In 1867 he was the candidate for governor in opposition to Rutherford B. Hayes, and the campaign was close and exciting, though Hayes won. During two terms, 1869 to 1881, Thurman was a member of the United States Senate, where he served on the judiciary committee and on the electoral commission of 1877, and was a leader of the party and an authority on constitutional questions. He had been a candidate for the Presidential nomination, and in 1888 he accepted the second place on the ticket with Grover Cleveland. In

ALLEN G. THURMAN.

to have lived in the tenth century much farther south than in later times. These natives, after discharging a shower of arrows on the Scandinavians, fled. During the attack Thorvald received an arrow wound of which he died. After burying him at Cape Alderton his crew returned to Rhode Island, and in 1005 sailed for Greenland.

Three Rivers, BATTLE OF. When a large British and German force began to arrive in the St. Lawrence (May, 1776) the Americans retreated up the river to

the election Cleveland and Thurman were defeated by Harrison and Morton. Senator Thurman died in Columbus, O., Dec. 12, 1895.

Thurston, LORREN A., diplomatist; born in Hawaii; studied law in Columbia College in 1880-81; practised in Honolulu, where he also published the *Daily Bulletin* in 1884; elected to the legislature in 1886; prominent in the reform movement of 1887; minister of the interior in 1887-90; member of the House of Nobles in 1892-98; and was chairman of the commission appointed in 1893 to present to the United

Frederic Remond

States government the project for the annexation of the Sandwich Islands. See HAWAII.

Thwaites, REUBEN GOLD, historian; born in Dorchester, Mass., May 15, 1853; was educated at Yale College; served as editor of the *Wisconsin State Journal* in 1876-86; then became secretary and superintendent of the Wisconsin State Historical Society. He is the author of *Historic Waterways*; *The Story of Wisconsin*; *The Colonies in 1492-1750*; *Afloat on the Ohio*, etc. He was also editor of the *Wisconsin Historical Collections* (volumes ix.-xv.); *Chronicles of Border Warfare*; *The Jesuit Relations* (73 volumes); *Original Journals of Lewis and Clark*; *Father Marquette*; *Daniel Boone*, etc.

Tibbles, THOMAS HENRY, politician; born in Washington county, O., May 22, 1840; joined in the movement to settle Kansas and make it a free State; became an itinerant Methodist preacher, then a Presbyterian minister, and subsequently a journalist and editor of the *Independent* of Lincoln, Neb. He early affiliated with the Populist party and was its candidate for vice-president in 1904.

Ticknor, GEORGE, author; born in Boston, Mass., Aug. 1, 1791; graduated at Dartmouth College in 1807; admitted to the bar in 1813; professor of modern languages and literature at Harvard College in 1819-35. His publications include *History of Spanish Literature*; *the Life of General Lafayette*; *Report of the Board of Visitors on the United States Military Academy at West Point for 1826*; *Life of W. H. Prescott*; etc. He died in Boston, Mass., Jan. 26, 1871.

Ticonderoga, OPERATIONS AT. In the summer of 1758 the Marquis de Montcalm occupied the fortress of Ticonderoga, on Lake Champlain, with about 4,000 men, French and Indians. General Abercrombie personally commanded the expedition designed to capture this fortress, and at the beginning of July he had assembled at the head of Lake George about 7,000 regulars, nearly 9,000 provincials, and a heavy train of artillery. The army moved (July 5) down the lake in 900 bateaux and 125 whale-boats, and spent the night at a place yet known (as then named) as Sabbath-day Point. At dawn they landed at the foot of the lake, about

4 miles from Ticonderoga. The whole country was covered with a dense forest, and tangled morasses lay in the way of the English. Led by incompetent guides, they were soon bewildered; and while in that condition the right column, led by Lord Howe, was suddenly attacked by a small French force. A sharp skirmish ensued. The French were repulsed with a loss of 148 men made prisoners. At the first fire Lord Howe was killed, when the greater part of the troops fell back in confusion to the landing-place. From the prisoners Abercrombie learned that a reinforcement for Montcalm was approaching. He was also told of the strength of the garrison and the condition of the fortress; but the information, false and deceptive, induced him to press forward to make an immediate attack on the fort without his artillery. This was a fatal mistake. The outer works were easily taken, but the others were guarded by abatis and thoroughly manned. Abercrombie ordered his troops to scale the works in the face of the enemy's fire (July 8), when they were met by insuperable obstacles. After a bloody conflict of four hours, the assailants were compelled to fall back to Lake George, leaving about 2,000 men dead or wounded in the forest. Abercrombie then hastened to his camp at the head of the lake. The loss of the French was inconsiderable.

Pitt conceived a magnificent plan for the campaign of 1759, the principal feature of which was the conquest of all Canada, and so ending the puissance of France in America. Abercrombie, who had been unsuccessful, was superseded by Gen. Sir Jeffrey Amherst in the command of the British forces in America in the spring of 1759. The new commander found 20,000 provincial troops at his disposal. A competent land and naval force was sent from England to co-operate with the Americans. The plan of operations against Canada was similar to that of Phipps and Winthrop in 1690. A powerful land and naval force, under Gen. James Wolfe, were to ascend the St. Lawrence and attack Quebec. Another force, under Amherst, was to drive the French from Lake Champlain, seize Montreal, and join Wolfe at Quebec; and a third expedition, under General Prideaux, was to capture Fort

TICONDEROGA. OPERATIONS AT

TICONDEROGA AND THE LAKE, FROM MOUNT DEFIANCE.

Niagara, and then hasten down Lake Ontario and the St. Lawrence to Montreal. Amherst appeared before Ticonderoga (July 22, 1759) with about 11,000 men. The French commander had just heard, by Indian runners, of the arrival of Wolfe before Quebec (June 27), and immediately prepared to obey a summons to surrender. The garrison left their outer lines on the 23d and retired within the fort, and three days afterwards, without offering any resistance, they abandoned that also, partially demolished it, and fled to Crown Point. That, too, they abandoned, and fled down the lake to the Isle aux Noix, in the Sorel. Amherst pursued them only to Crown Point.

When, in 1775, it became apparent that war was inevitable, the importance of the strong fortresses of Ticonderoga and Crown Point, on Lake Champlain, and their possession, became subjects of earnest consultation among patriots. The subject

was talked of in the Connecticut legislature after the affair at Lexington, and several gentlemen formed the bold design of attempting their capture by surprise. With this view, about forty volunteers set out for Bennington to engage the co-operation of Ethan Allen, a native of Connecticut, and the leader of the GREEN MOUNTAIN BOYS (*q. v.*). He readily seconded their views. They had been joined at Pittsfield, Mass., by Colonels Easton and Brown, with about forty followers. Allen was chosen the leader after the whole party reached Castleton, at twilight, on May 7. Colonel Easton was chosen to be Allen's lieutenant, and Seth Warner, of the Green Mountain Boys, was made third in command. At Castleton Colonel Arnold joined the party. He had heard the project spoken of in Connecticut just as he was about to start for Cambridge. He proposed the enterprise to the Massachusetts committee of safety, and

TICONDEROGA, OPERATIONS AT

was commissioned a colonel by the Provincial Congress, and furnished with means and authority to raise not more than 400 men in western Massachusetts and lead them against the forts. On reaching Stockbridge, he was disappointed in learning that another expedition was on the way. He hastened to join it, and claimed the right to the chief command by virtue of his commission. It was emphatically refused. He acquiesced, but with a bad grace.

On the evening of the 9th they were on the shore of Lake Champlain, opposite Ticonderoga, and at dawn the next morning the officers and eighty men were on the beach a few rods from the fortress, sheltered by a bluff. A lad familiar with the fort was their guide. Following him, they ascended stealthily to the sally-port, where a sentinel snapped his musket and retreated into the fort, closely followed by the invaders, who quickly penetrated to the parade. With a tremendous shout the New-Englanders awakened the sleeping garrison, while Allen ascended the outer staircase of the barracks to the chamber of the commander (Captain Dela-

place), and beating the door with the handle of his sword, cried out with his loud voice, "I demand an instant surrender!" The captain rushed to the door, followed by his trembling wife. He knew Allen, and recognized him. "Your errand?" demanded the commander. Pointing to his men, Allen said, "I order you to surrender." "By what authority do *you* demand it?" inquired Delaplace. "By the authority of the Great Jehovah and the Continental Congress!" answered Allen, with emphasis, at the same time flourishing his broadsword over the head of the terrified commander. Delaplace surrendered the fort and its dependencies, and a large quantity of precisely such munitions of war as the colonists needed—120 iron cannon, fifty swivels, two mortars, a howitzer, a coehorn, a large quantity of ammunition and other stores, and a warehouse full of naval munitions, with forty-eight men, women, and children, who were sent to Hartford. Two days afterwards Col. Seth Warner made an easy conquest of Crown Point.

In June, 1777, with about 7,000 men, Lieutenant-General Burgoyne left St.

RUINS OF FORT TICONDEROGA.

TICONDEROGA—TILDEN

Johns, on the Sorel, in vessels, and moved up Lake Champlain. His army was composed of British and German regulars, Canadians, and Indians. The Germans were led by Maj.-Gen. Baron de Riedesel. Burgoyne's chief lieutenants were General Fraser and Maj.-Gen. William Phillips. The invading army reached Crown Point, June 26, and menaced Ticonderoga, where General St. Clair was in command. The garrison there, and at Mount Independence opposite, did not number in the aggregate more than 3,500 men, and not more than one in ten had a bayonet; while the invaders numbered between 8,000 and 9,000 Tories, including a reinforcement of Indians, and a splendid train of artillery. On the 29th Burgoyne issued a grandiloquent proclamation to the people, and on July 1st moved against the fort. He planted a battery on a hill 700 feet above the fort, since known as Mount Defiance. The battery there made Ticonderoga absolutely untenable, and a council of war determined to evacuate it. On the evening of July 5th, invalids, stores, and baggage were sent off in boats to Skenesboro, and at 2 A.M. on the 6th the troops left the fort silently, and withdrew to Mount Independence across a bridge of boats. The movement was discovered by the British, and pursuit was immediately begun. The Americans lost at Ticonderoga a large amount of military stores and provisions, and nearly 200 pieces of artillery.

While Burgoyne was pressing down the valley of the upper Hudson towards Albany, General Lincoln, in command of troops eastward of that river, attempted to recover Ticonderoga. On Sept. 13, 1777, he detailed Col. John Brown with 500 men for the purpose. Brown landed at the foot of Lake George, and by quick movements surprised all the posts between that point and Fort Ticonderoga, 4 miles distant. He took possession of Mount Defiance and Mount Hope, the old French lines, 200 bateaux, several gunboats, an armed sloop with 290 prisoners, besides releasing 100 American prisoners. He then proceeded to attempt the capture of Ticonderoga, but it was found impracticable, and he abandoned the enterprise and rejoined Lincoln. After the war the fort became a picturesque ruin, but was restored to its original state at the ex-

pense of Mrs. Stephen H. P. Pell, of New York City, in 1909.

Tidal Wave, in American political affairs, a phrase applied to an unusually large majority of one party over another. The Democratic party were phenomenally successful in both State and Congressional elections from 1872 to 1876. In the latter year the Presidential election was decided by the ELECTORAL COMMISSION (*q. v.*).

Tiebout, CORNELIUS, engraver; born in New York in 1777; was apprenticed to a silversmith; studied art in London in 1795-97; settled in Philadelphia, Pa., where he engraved portraits of Washington, Gen. Horatio Gates, John Jay, Thomas Jefferson, and Bishop White. Later he removed to Kentucky, where he died in 1830.

Tiedeman, CHRISTOPHER GUSTAVUS, legal writer; born in Charleston, S. C., July 16, 1857; graduated at the College of Charleston in 1876, and at the New York Law School in 1879; was professor of law in the University of Missouri for ten years, and in the New York University for six years, and dean, Buffalo Law School, from 1902. He was author of *Limitations of Police Powers; Unwritten Constitution of the United States; Municipal Corporations; State and Federal Control of Persons and Property*, etc. He died in New York City, Aug. 25, 1903.

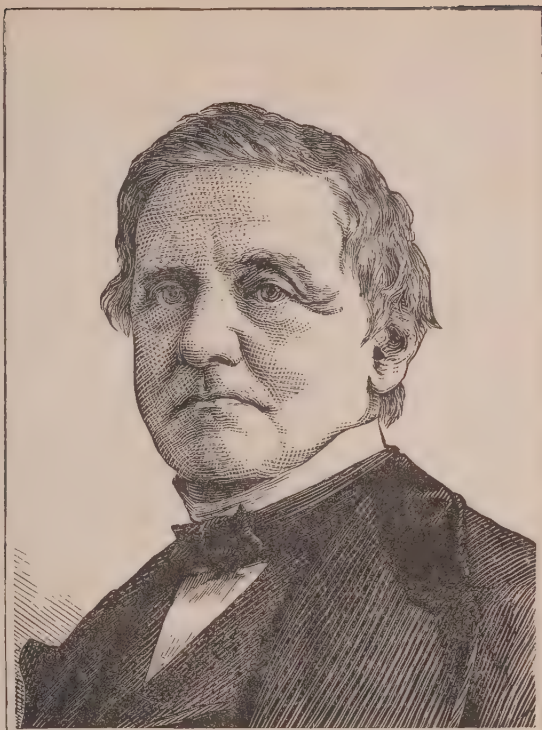

Tiffin, EDWARD, legislator; born in Carlisle, England, June 19, 1766; emigrated to the United States and settled in Charlestown, Va., in 1784; studied medicine; became a Methodist preacher; removed to Ohio in 1798; was first governor of the State in 1803-07; served an unexpired term in the United States Senate in 1807-09; was commissioner of the United States land office in 1812-15; and subsequently surveyor-general of the Northwest Territory. The city of Tiffin, O., was named in his honor. He died in Chillicothe, O., Aug. 9, 1829.

Tilden, SAMUEL JONES, statesman; born in New Lebanon, N. Y., Feb. 9, 1814; entered Yale College, but finished his studies at the University of New York; studied law with Benjamin F. Butler; became a journalist, and in 1844 established the *Daily News* in New York City. He soon returned to the bar and practised his profession with great success. In 1874 he

was elected governor of New York, and broke up the corrupt "canal ring"; and in 1876 was the Democratic candidate for the Presidency, after which he retired to private life, but exercised great influence in the councils of his party. He died at his country seat, "Greystone," near Yonkers, Aug. 4, 1886, leaving a fortune of several million dollars, the bulk of which he desired to be used in founding a great public library in New York City, but his will was successfully contested. See ELECTORAL COMMISSION; NEW YORK PUBLIC LIBRARY.

Tilghman, MATTHEW, patriot; born in Hermitage, Md., Feb. 17, 1718; member of the General Assembly of Maryland in 1751-77; served on the committee to protest to the King against the Stamp Act. He was president of the Revolutionary Convention which managed the province in 1774-77; was called from his seat in Congress in June, 1776, to become president of the convention which drew up the first constitution of Maryland; and was elected to the Maryland Senate in 1777 and 1781. He died in Hermitage, Md., May 4, 1790.

Tilghman, TENCH, military officer; born in Baltimore, Md., Dec. 25, 1744; was a merchant before the Revolution; became one of Mercer's Flying Camp as captain of a company of Philadelphia light infantry. In August, 1776, he became Washington's aide and confidential secretary, and remained in that post until the close of the war, with the rank of lieutenant-colonel after April, 1777. He was thoroughly patriotic, and much of the time while with Washington for five years he refused pay for his services. He was in every action in which the main army was

SAMUEL J. TILDEN.

concerned. He was chosen by Washington to bear to Congress at Philadelphia despatches announcing the surrender of Cornwallis. In a letter to General Sullivan in Congress (May 11, 1781), he had highly commended Tilghman as deserving of great consideration. He died in Baltimore, Md., April 18, 1876.

Tillman, BENJAMIN RYAN, legislator; born in Edgefield county, S. C., Aug. 11, 1847; received an academic education; governor of South Carolina in 1890-92; and elected United States Senator for the terms 1895-1913. He has been interested in agriculture for many years; established the Clemson Agricultural and Mechanical College in Fort Hill, S. C.; originated the dispensary system of selling liquor under State control (see SOUTH CAROLINA). He became known as "Pitchfork Tillman," on account of his savage

TILTON—TIPPECANOE

speech in the Senate against President Cleveland.

Tilton, THEODORE, journalist; born in New York City, Oct. 2, 1835; editor of the *Independent* in 1856-71. In 1874 he created wide-spread excitement by charging Henry Ward Beecher with unlawful intimacy with his wife. In 1883 Mr. Tilton went to Paris, where he resided till his death, May 25, 1907.

Timber. See LUMBER INDUSTRY; NATURAL RESOURCES, CONSERVATION OF; WOOD PULP AND PULP WOOD.

Timby, THEODORE RUGGLES, inventor; born in Dover, N. Y., April 5, 1819. He conceived the idea of a revolving turret for military purposes when he was a lad. At the age of nineteen he made a model, and at the beginning of 1843 filed his first caveat in the United States Patent Office. He obtained other patents for improvements, and received for his invention of the turret the official sanction of the national government. When the Civil War broke out, Mr. Timby perfected his invention and obtained a fifth patent for "a revolving tower for offensive warfare, whether used on land or water." The constructors of "monitors," after the affair with the *Merrimac*, recognized the validity of Mr. Timby's claim, and paid him a liberal sum for the right to use his invention. He also invented the floating dry-dock (1836), the American turbine water-wheel, and the method of firing ordnance by electricity. He died in Brooklyn, N. Y., Nov. 9, 1909.

Timrod, HENRY, poet; born in Charleston, S. C., Dec. 8, 1829; was educated at the University of Georgia; practised law; taught for several years, during which time he contributed to Southern papers and magazines; was editor of the *South Carolinian*, in Columbia, from 1864 till the city was burned in 1865, when he lost all. His best-known poem was a short ode written for Memorial Day. He died in Columbia, S. C., Oct. 6, 1867.

Tingey, THOMAS, naval officer; born in London, England, Sept. 11, 1750; served in the British navy; came to America before the Revolutionary War. He was appointed captain in the Continental navy in 1798; commanded the *Ganges* in 1799, and captured many French vessels. He was in the naval service fifty years.

He died in Washington, D. C., Feb. 23, 1829.

Tin-plate made a new record in two or three important particulars in the commerce of the United States for the fiscal year 1910-11. The imports were lower and the outward movement of American tin-plate was larger than ever before.

The first record of production of domestic tin-plate shows a production of $2\frac{1}{4}$ million pounds for the last 6 months of 1891. During 1892, the first full year for which figures are available, the production amounted to 42 million pounds, and from that time on the production increased rapidly, passing the 500 million mark in 1897 and the one billion mark in 1903, the actual figures being 575 and 1,075 million pounds respectively. In 1906 the production was 1,294 million pounds, and in 1909 1,371 million pounds.

Tippecanoe, BATTLE OF. In the summer of 1811, the followers of Tecumseh and his brother showing signs of hostility, the governor of Indiana suggested to the government the propriety of establishing a military post high up the Wabash. The government proposed the seizure of Tecumseh and his brother as hostages for peace. A regiment under Col. John Boyd, stationed at Pittsburgh, was placed under Harrison's command, and the latter was authorized, should the Indians begin hostilities, to call out the militia. Harrison agreed with the people of Vincennes that decisive measures should be taken at once. Tecumseh had gone South, and it was evident that his brother, the Prophet, was stirring up the Indians to war. Harrison, with Boyd's regiment, 300 strong, and 500 militia, partly from Kentucky, including two or three mounted companies, went up the Wabash about 60 miles to Terre Haute, and near there established a post called Fort Harrison. Thence he sent Delaware chiefs on a mission to the Prophet, who treated them with scorn. The troops pressed forward, and on Nov. 6, 1811, they encamped within 3 miles of the Prophet's town.

Harrison arranged his camp in the form of an irregular parallelogram, having on its front a battalion of United States infantry, and flanked on the left by one company, and on the right by two companies, of Indiana militia. In the rear

TIPPECANOE, BATTLE OF

was a battalion of United States infantry under Capt. W. C. Bean, acting as major, with Capt. R. C. Barton, of the regulars, in immediate command. These were supported on the right by four companies of Indiana militia, led respectively by Captains Snelling, Posey, Scott, and Warlick, the whole commanded by Lieut.-Col. L. Decker. The right flank, 80 yards wide, was filled with mounted riflemen under Captain Spencer. The left, about 150 yards in extent, was composed of mounted riflemen under Maj.-Gen. S.

crept through the prairie grass, and with horrid yells fell upon Harrison's camp. The whole camp was soon awakened, and their fires were extinguished. A desperate fight ensued. Nineteen-twentieths of the troops had never seen a battle. The combat soon extended to almost the whole square. The Indians advanced and retreated several times until, after daylight, they were attacked and dispersed by the mounted men, leaving forty of their dead on the field. Harrison's loss was upward of sixty killed, and twice as many

TIPPECANOE BATTLE GROUND IN 1860.

Wells, and led by Cols. F. Geiger and David Robb. Two troops of dragoons under Col. J. H. Daviess, were stationed in the rear of the first line, and at a right-angle with those companies was a troop of cavalry as a reserve, under Capt. B. Parke. In the centre were the wagons, baggage, officers' tents, etc. Having supped, Harrison gave instructions to the several officers, and very soon the whole camp, excepting the sentinels on duty, were soundly slumbering. There was a slight drizzle of rain, and the darkness was intense.

In the camp of the Prophet all were awake, prepared to execute his orders, and after midnight (Nov. 7) the warriors

wounded. The mounted men rode to the Prophet's town and found it entirely deserted. They had left much that was valuable behind. The town was burned, and Harrison deemed it prudent to make a speedy retreat, encumbered as he was with the wounded. He destroyed much of the baggage of the army to afford transportation to the wounded, and fell back to Vincennes. This battle of Tippecanoe gave Harrison a decided military reputation. The battle-ground is close by Battle Ground, a little town near the Louisville, New Albany, and Chicago Railway, in Indiana. The battle-field, yet covered with the same oaks as at the time of the con-

TOBACCO—TOD

test, belongs to the State of Indiana, which has enclosed about 7 acres.

Tobacco, a plant so called by the natives of Haiti, or Santo Domingo. It played an important part in the early history of Virginia, and was found there under cultivation by the natives by the first adventurers sent by Raleigh, and by them introduced into England, where its use rapidly increased. When the English became seated at Jamestown, they began its cultivation, and it soon became the staple agricultural product of the colony and their chief source of revenue. Within less than ten years it became the standard currency of the colonies, by the price of which values were regulated. The standard price was about 66 cents a pound. For the seven years ending in 1621, the annual exportation of tobacco to England from Virginia averaged about 143,000 lbs. King James tried to suppress its inordinate use, and wrote *A Counter-blast to Tobacco*; and in May, 1621, Parliament passed a bill for that purpose, by which no tobacco was allowed to be imported into England except from Virginia and the Somers Isles (Bermudas), and none was allowed to be planted in England. It was also subject to a crown duty of 6d. per pound. Finally, by relaxing restrictions, it became a source of large revenue to England, amounting in 1676 to \$775,000. In 1680 it had fallen in price to a penny a pound, and the colonists were not able to buy common necessities. They petitioned for permission to resort to an old plan for reducing production and so raising the price by a cessation of crops for a year or two. The governor, alarmed by symptoms of a new rebellion, called a meeting of the assembly (April 18); but that body proceeded no further than to petition the King to order a "stint," or "cessation," in Virginia, Maryland, and Carolina. The disappointed planters assembled, and in a riotous manner cut up the tobacco-plants extensively. They were prosecuted. Several of them were found guilty, and, under advice from England, some of them were executed. It was afterwards cultivated in other English-American colonies, and at the middle of the 18th century there were exported to England in three years 40,000,000 lbs.

Production.—In the calendar year 1910

the production in the United States was: Cigar type, 166,999,000 pounds, valued at \$16,948,000; chewing, smoking, snuff, and export types, 817,890,000 pounds, valued at \$74,510,000—total value, \$91,458,000.

Manufactures.—According to a federal census report for 1909 (1911), there were in the United States 15,822 tobacco manufactories under factory-system classification, which employed a combined capital of \$245,660,000; and wage-earners, 166,810; paid \$69,355,000 for wages and \$177,186,000 for stock used; and had products valued at \$416,695,000.

Commerce.—During the calendar year 1910 the imports of leaf tobacco aggregated 42,343,323 pounds, valued at \$24,709,939, and the imports of cigars, cigarettes, and cheroots had a total value of \$6,178,454, including \$1,878,938, duty free, from the Philippines. The exports comprised leaf, stem, and trimmings, 328,562,036 pounds, valued at \$36,070,695, and all manufactures, \$4,587,594. Combined, the imports were \$30,888,393; exports, \$40,658,289—total trade, \$71,546,682, as compared with imports, \$17,253,891; exports, \$32,624,539—total trade, \$49,878,430. See TRUSTS.

Tocqueville, ALEXIS CHARLES HENRI CLEREL, COUNT DE, statesman; born in Paris, France, July 29, 1805; became a lawyer in 1827; visited the United States with Gustave de Beaumont in 1831 to study the penitentiary system. Returning to France he there advocated the solitary method as practised in the penitentiary of Cherry Hill, Philadelphia, and was largely instrumental in entirely remodelling not only the penitentiary system of France, but of the Continent. He was the author of *The Penitentiary System of the United States and its Application in France* (with Gustave de Beaumont); *Democracy in America*; *On the Penitentiary System in the United States and the Confidential Mission for the Minister of the Interior of MM. de Beaumont and de Tocqueville*, etc. He died in Cannes, France, April 16, 1859.

Tod, DAVID, diplomatist; born in Youngstown, O., Feb. 21, 1805; admitted to the bar in 1827, and practised in Warren for fifteen years; was a member of the State senate in 1838; minister to Brazil in 1847-52; delegate to the Charleston

TODD—TOHOPEKA

convention in 1860; and governor of Ohio in 1861. He died in Youngstown, O., Nov. 13, 1868.

Todd, CHARLES BURR, author; born in Redding, Conn., Jan. 9, 1849; received a public school education; taught school for several years; was appointed secretary of the commission to print the early records of New York City in 1895. His publications include *History of the Burr Family*; *History of Redding, Conn.*; *Life and Letters of Joel Barlow*; *Story of the City of New York*; *Story of Washington, the National Capital*; *Lance Cross and Canoe in the Valley of the Mississippi* (with Rev. W. H. Milburn); *A Brief History of New York*, etc.

Todd, CHARLES SCOTT, military officer; born near Danville, Ky., Jan. 22, 1791; graduated at William and Mary College in 1809; was a subaltern and judge-advocate of Winchester's division of Kentucky volunteers in 1812; made captain of infantry in May, 1813; and was aide to General Harrison in the battle of the THAMES (q. v.). In March, 1815, he was made inspector-general, with the rank of colonel; and in 1817 was secretary of State of Kentucky. In 1820 he was confidential agent to Colombia, and in 1841-45 was United States minister to Russia. He died in Baton Rouge, La., May 17, 1871.

Todd, JOHN, military officer; born in Montgomery county, Pa., in 1750; was adjutant-general to Gen. Andrew Lewis in the action of Point Pleasant, Va., in 1774; accompanied DANIEL BOONE (q. v.) on an exploring tour as far as Bowling Green, Ky., in 1775; settled near Lexington, Ky., in 1776; represented Kentucky county in the Virginia legislature in the same year; was commissioned colonel in 1777; for two years was commandant of the civil government of that county, which subsequently was made the State of Illinois. He was killed while leading his forces against the Indians at the Blue Licks, Ky., Aug. 19, 1782.

Todd, MARION, lawyer; born in Plymouth, N. Y.; educated in Eaton Rapids

schools and at Ypsilanti Normal School, in Michigan; admitted to the bar of the Supreme Court of California in 1881; and practised there for several years. She wrote *Prof. Goldwin Smith and His Satellites in Congress*; *Protective Tariff Delusion*; *Pizarro and John Sherman*; and *Railroads of Europe and America*.

Todd, THOMAS, jurist; born in King and Queen county, Va., Jan. 23, 1765; served in the latter part of the Revolution with the Continental army; became a lawyer in 1786; was appointed clerk of the United States court for the district of Kentucky, and when it became a State in 1799 was made clerk of the court of appeals; became chief-justice of the court in 1806. He was appointed an associate justice of the United States Supreme

CHARLES SCOTT TODD.

Court, Feb. 7, 1826, but died in Frankfort, Ky., on the same day.

Tohopeka, or Horseshoe Bend, BATTLE AT. In February, 1814, troops from east Tennessee were on the march to reinforce Jackson for the purpose of striking a finishing blow at the power of the Creek Indians. About 2,000 of them pressed towards the Coosa, and at the same time a similar number from west Tennessee

TOHOPEKA, BATTLE AT

were making their way into Alabama. Colonel Williams, with 600 regulars, reached Fort Strother on Feb. 6. Other troops soon joined them, and the Choctaw Indians openly espoused the cause of the United States. At the close of February,

peninsula, near the river, was a village of log-huts, where hundreds of canoes were moored, so that the garrison might have the means of escape if hard pushed. They had an ample supply of food for a long siege. They were about 1,200 in number,

MAP OF THE BATTLE AT TOHOPEKA.

Jackson found himself at the head of 5,000 men. Supplies were gathered, and at the middle of March the troops were ready to move. Meanwhile the Creeks, from experience, had such premonitions of disaster that they concentrated their forces at the bend of the Tallapoosa River, in the northeast part of Tallapoosa county, Ala., at a place called Tohopeka, or Horse-shoe Bend, a peninsula containing about 100 acres of land. White men from Pensacola and half-bloods hostile to the United States aided them in building a strong breastwork of logs across the neck of the peninsula. They pierced it with two rows of port-holes, arranged in such a manner as to expose the assailants to a cross-fire from within. Back of this was a mass of logs and brush; and at the foot of the

one-fourth being women and children. There the Indians determined to defend themselves to the last extremity.

To this stronghold Jackson marched, sending his stores down the Coosa in flat-boats; and on the morning of March 27 he halted within a few miles of the breastworks at Tohopeka. His spies soon informed him of the position of the Indians. He sent General Coffee, with all the mounted men and friendly Indians, to cross the river two miles below and take position opposite the village at the foot of the peninsula. Then he pressed forward and planted two cannon within 80 yards of the breastworks on the neck, and opened fire upon them. As the small balls were buried in the logs and earth the Indians sent up a shout of derision and defied their

TOHOPEKA—TOLERATION ACTS

assailants. Coffee, with some Cherokees, swam across the river and seized the boats, with which quite a body of troops were enabled to cross at once. These burned the Indian village and approached the enemy in their rear, but were too few to dislodge the Indians. Meanwhile Jackson had been vainly battering the works on the neck with cannon-balls, and he proceeded to storm them. In the face of a tempest of bullets they pressed forward. The leader of the storming-party (Maj. L. P. Montgomery) leaped upon the breastworks and called upon his men to follow. He was shot dead, when Ensign Sam Houston (afterwards conqueror and President of Texas, United States Senator, etc.), who was wounded in the thigh by a barbed arrow, leaped down among the Indians and called upon his companions to follow. They did so, and fought like tigers. Their dexterous use of the bayonet caused the Indians to break their line and flee in wild confusion to the woods that covered the peninsula.

Believing torture awaited every captive, not one of them would suffer himself to be taken or ask for quarter. Some attempted to escape by swimming across the river, but were shot by Tennessee sharp-shooters. Others secreted themselves in thickets, and were driven out and slain; and a considerable number took refuge under the river bluffs, where they were covered by a part of the breastworks and felled trees. To the latter Jackson sent a messenger, telling them their lives should be spared if they would surrender. He was fired upon. A cannon brought to bear upon the stronghold effected little. Then the general called for volunteers to storm it, and wounded Ensign Houston was the first to step out. Nothing could be effected until the torch was applied; and as the Indians rushed out from the flames they were shot down without mercy. The carnage continued until late in the evening; and when it ended 557 Creek warriors lay dead on the peninsula. Of 1,000 who went into the battle in the morning, not more than 200 were alive, and many of these were severely wounded. Jackson lost thirty-two killed and ninety-nine wounded. The Cherokees lost eighteen killed and thirty-six wounded. This blow broke the proud spirit of the Creeks, and

they had no heart to make a stand any where else.

Toledo, a city and county seat of Lucas county, O., near the junction of the Maumee River and Maumee Bay. Its early name was the Miami of the Lakes, which in time gave way to that of the Lady of the Lakes. Long before the whites settled here the place was a noted fishing resort of the Miami Indians. Subsequently it became a trading-post. It was not till after the victory of General Wayne at Fallen Timbers (1794) that it was possible for the whites to settle here. Pop. (1910), 168,497.

Toledo War, a contest regarding the boundary-line between the State of Ohio and the Territory of Michigan in 1835-37. Owing to both the State and the Territory taking possession of a disputed section of land, each appealed to President Jackson for a settlement of the difficulty. He, however, refused to interfere, whereupon the governor of Ohio called out the State militia and the governor of Michigan Territory took possession of Toledo. Just as matters were assuming a threatening phase, Congress decided to admit Michigan into the Union as a State, June 15, 1836, on conditions regarding the boundary-line which were formally accepted.

Toleration Acts. At a General Court of Elections, held at Portsmouth, beginning May 19, 1647, for "the colonie and province of Providence," after adopting many acts and orders concerning the government and for the punishment of crimes, it was decreed that "These are the laws that concern all men, and these are the penalties for the transgression thereof, which by common consent are ratified and established throughout the whole colony; and otherwise than thus, what is herein forbidden, all men may walk as their consciences persuade them, every one in the name of his God." This act of toleration was so broad and absolute that it would include Christian, Jew, Mohammedan, Parsee, Buddhist, or pagan.

The General Assembly of Maryland, convened at St. Mary's, April 2, 1649, after enacting severe punishments for the crime of blasphemy, and declaring that certain penalties should be inflicted upon any one who should call

TOM—TO-MO-CHI-CHI

another a sectarian name of reproach, adopted the declaration that "whereas the enforcing of conscience in matters of religion hath frequently fallen out to be of dangerous consequence in those common-wealths where it has been practised, and for the more quiet and peaceable government of this province, and the better to preserve mutual love and unity among the inhabitants, . . . no person or persons whatsoever within this province, or the islands, posts, harbors, creeks, or havens thereunto belonging, professing to believe in Jesus Christ, shall from henceforth be anyways troubled or molested or discountenanced for or in respect of his or her religion, nor in the free exercise thereof, within the province or the islands thereunto belonging, nor any way compelled to the belief or exercise of any other religion against his or her conscience." This was an outgrowth of English statutes. On Oct. 27, 1645, the English House of Commons ordered "that the inhabitants of the Bermudas, and of all other American plantations now or hereafter planted, should, without molestation or trouble, have and enjoy the liberty of conscience in matters of God's worship." In 1647 Parliament passed another act, allowing all persons to meet for religious duties and ordinances in a fit place, provided the public peace was not disturbed. The Maryland toleration act (1649) was the joint work of Roman Catholics and Protestants. The General Assembly at that time was composed of eight Roman Catholics and sixteen Protestants—three councillors, and five burgesses were Roman Catholics, and the governor (William Stone), six councillors, and nine burgesses were Protestants. The act did not establish absolute toleration, as did the act of Rhode Island passed two years before, for it applied only to orthodox Christians, so-called, who accepted the doctrine of the Trinity.

Tom, popularly known as **BLIND TOM**, musician; born blind, and of negro slave parents, near Columbus, Ga., May 25, 1849. During infancy he gave no sign of intelligence excepting when he heard a sound; was afterwards precocious in learning words, but while he could repeat whole conversations that he had heard, words had no meaning to him, and he made

known his wants by inarticulate sounds. His performances on the piano were wonderful, and he could reproduce from memory over 5,000 compositions, including the most difficult selections from Beethoven, Chopin, Bach, etc. He died in Hoboken, N. J., June 13, 1908.

Tomahawk, originally a North American Indian war-club, more generally applied to the war-hatchet which the Indians made of stone. After the Europeans had formed alliances with the Indians, the former introduced a new form of tomahawk which combined the features of an implement of warfare with a tobacco-pipe, the handle forming the stem.

Tomes, ROBERT, physician; born in New York City, March 27, 1817; graduated at Washington (now Trinity) College in 1835; studied medicine in Philadelphia and later at the University of Edinburgh; returned to the United States and practised in New York for a few years, and was then appointed surgeon on a vessel for the Pacific Mail Steamboat Company, and made trips between Panama and San Francisco. He was United States consul at Rheims, France, in 1865-67. He contributed largely to journals and magazines; and was author of *Panama in 1855*; *The American in Japan*; *The Battles of America by Sea and Land*; *The War with the South: A History of the Great American Rebellion*, etc. He died in Brooklyn, N. Y., Aug. 28, 1882.

To-mo-chi-chi, Creek chief; born in Georgia about 1642; met Oglethorpe in Savannah in friendly conference early in 1733. He was then ninety-one years old, of commanding person and grave demeanor, and though for some reason he had been banished from the Lower Creeks, he had great influence throughout the confederacy as a brave chief and wise sachem. Mary Musgrave, the half-breed wife of a South Carolina trader, acted as interpreter. He pledged his unwavering friendship for the English, and he kept his word. A satisfactory treaty was made, by which the English obtained sovereignty over the domain between the Savannah and Altamaha rivers, and westward as far as the extent of their tide-waters. Oglethorpe distributed presents among the friendly Indians. In the spring of 1734 To-mo-chi-chi went with Oglethorpe to

TOMPKINS—TOOMBS

England. He was accompanied by his wife, their adopted son and nephew, and five chiefs. They were cordially received in England, and were objects of great curiosity, for Indians had not been seen in that country since Peter Schuyler was there with Mohawks in Queen Anne's reign. They were taken in coaches, each drawn by six horses, to have an interview with the King, arrayed in brilliant English costume—the Creek monarch and his queen in scarlet and gold. He made a speech to King George and gave him a bunch of eagle's feathers, to which a gracious reply was made assuring the Indians of English protection. They remained four months in England, during which time a brother of the Indian queen died of small-pox. The company were conveyed to the place of embarkation in the royal coaches, with presents valued at \$2,000; and the Prince of Wales gave To-mo-chi-chi's heir a gold watch, with an injunction to call upon Jesus Christ every morning when he looked at it. They reached Savannah late in December, 1734. To-mo-chi-chi died Oct. 5, 1739. At his funeral minute-guns were fired at the battery at Savannah, and musketry was discharged. He was buried in the centre of the town, and Oglethorpe ordered a "pyramid of stone" to be erected over his grave.

Tompkins, DANIEL D., statesman; born in Fox Meadows (now Scarsdale), N. Y., June 21, 1774; graduated at Columbia College in 1795; admitted to the bar in 1797; governor of New York in 1807-16; elected Vice-President of the United States in 1816 and 1820. Prior to retiring from the governorship of New York he sent a message dated Jan. 17, 1817, urging that a day be set for declaring the abolition of slavery in that State. Acting upon his wish, the legislature set July 4, 1827. He died on Staten Island, N. Y., June 11, 1825.

Tompkins, FORT, a defensive work on Staten Island, at the entrance of New York harbor, and opposite Fort Hamilton.

Toms River, a village and county-seat of Ocean county, N. J.; founded in early colonial days; formerly contained large salt works; was a retreat for privateers in the Revolutionary War; and was burned by the British, March 24, 1782.

Tonikan Indians, a stock of North American Indians belonging politically to the Chicasa Confederacy. About 1700 there were three tribes living respectively in Avoyelles parish, La., at Tonica Bluffs, on the Mississippi River, and near the junction of the Yazoo and Mississippi rivers. The second of these tribes was noted for its friendship with the French colonists, and all of them were skilful warriors. The Tonikans now living are located on the old Avoyelles reservation, near Marksville, La.

Tonti, HENRI, CHEVALIER DE, explorer; born in Gaeta, Italy, about 1650; son of Lorenzo Tonti; inventor of the Tontine system of association; entered the French army in his youth, and in the French naval service he lost a hand. In 1678 he accompanied La Salle to Canada, and assisted him in his Western explorations, building a fort on the site of Peoria, Ill., in 1680. He descended the Mississippi to its mouth with La Salle in 1682. In 1684 he went to the mouth of the Mississippi to meet La Salle, and attempted a settlement of Europeans in Arkansas. In 1685 he incited a force of Western Indians to attack the Senecas. Again he went down to the Gulf to meet La Salle, and was again disappointed; and in 1699 he went down to meet Iberville, and remained in the Gulf region, dying in Fort St. Louis, Mobile, in September, 1704.

Toombs, ROBERT, legislator; born in Washington, Wilkes co., Ga., July 2, 1810; graduated at Union College, Schenectady, N. Y., in 1828; studied law at the University of Virginia; practised until elected to Congress in 1845; was a captain under General Scott in the Creek War; was several years a member of the Georgia legislature; and remained in Congress until 1853, when he became United States Senator. He was re-elected in 1859. In the Senate, on Jan. 7, 1861, following a patriotic speech by Senator Crittenden, of Kentucky, he said: "The abolitionists have for long years been sowing dragons' teeth, and they have finally got a crop of armed men. The Union, sir, is dissolved. That is a fixed fact lying in the way of this discussion, and men may as well hear it. One of your confederates (South Carolina) has already wisely, bravely, boldly, met the public danger

TOOMBS—TORIES

and confronted it. She is only ahead and beyond any of her sisters because of her greater facility of action. The great majority of those sister States under like circumstances consider her cause as their cause." He then declared that "the South" was prepared for the arbitrament of the sword. "Now, sir," he said, "you

ROBERT TOOMBS.

may see the glitter of the bayonet and hear the tramp of armed men from your capital to the Rio Grande." This was uttered before any State convention excepting that of South Carolina had passed an ordinance of secession. Toombs then defined his own position. "I believe," he said, "for all the acts which the Republican party call treason and rebellion there stands before them as good a traitor and as good a rebel as ever descended from Revolutionary loins." He demanded the right of going into all Territories with slaves as property, and that property to be protected by the national government. "You say No," he said; "you and the Senate say No; the House says No; and throughout the length and breadth of your whole conspiracy against the Constitution there is one shout of No! It is the price of my allegiance. Withhold it, and you can't get my obedience. There is the philosophy of the armed men that have sprung up in this country; and I had rather see the population of my own, my native land, beneath the sod than that they should support for one hour such a government." He was expelled from the Senate on March 14, 1861; became a mem-

ber of the Confederate convention at Montgomery in February, 1861; was made Secretary of State of the provisional government, and became a brigadier-general in the Confederate army in September. He died in Washington, Ga., Dec. 15, 1885. See STEPHENS, ALEXANDER H.

Topeka Constitution. See KANSAS.

Topolobampo, the name of a bay of the Gulf of California, belonging to the State of Sinaloa, Mexico; selected in 1886 by a number of conspicuous socialists in the United States as a site for a new colony. A charter was obtained under the laws of California; a model town was planned; and several hundred colonists went to the bay in the latter part of that year. Subsequently the company divided, and nearly all the members returned to the United States, the failure of the scheme being attributed to the unsuitable character of the land and the lack of water.

Torbert, ALFRED THOMAS ARCHIMEDES, military officer; born in Georgetown, Del., July 1, 1833; graduated at West Point in 1855, serving in Florida in 1856-57. He became colonel of the 1st New Jersey Volunteers in September, 1861, and was active in the Peninsular campaign. He commanded a brigade in the battles of Groveton, or second battle of Bull Run, South Mountain (where he was wounded), and Antietam. In November, 1862, he was promoted brigadier-general of volunteers; was engaged at Gettysburg; and commanded a division of cavalry in the Army of the Potomac from May to July, 1864. He was chief of cavalry in the Shenandoah campaign from August to October, 1864, and was brevetted major-general, United States army, in March, 1865. He resigned in October, 1866, and in 1871 was sent as consul-general to Havana. He was drowned in the wreck of the steamer *Vera Cruz* off the coast of Florida, Sept. 30, 1880.

Tories, or **Loyalists**. There was a great diversity of sentiment in the English-American colonies during the disputes with the mother-country before war commenced in 1775 and during its progress. Probably every American citizen desired the freedom which the most zealous patriot sought; they differed only in their opinions as to the best method to be employed for obtaining it. The Whigs, or the popular party, were radicals; the

TORIES

Tories, or the adherents of the crown and Parliament, were conservatives. The latter defended or condoned the oppressive measures of Parliament; the former denounced them as absolutely tyrannical and not to be endured. The question, Which party is right? was a vital one. The imperial government settled it in favor of the Whigs by rescinding their oppressive measures one after another; and this decision has been ratified by the judgment of posterity on both sides of the Atlantic. The Declaration of Independence compelled men of opposite opinions to avow them publicly. Then the important question arose concerning the policy of tolerating the Tories, or loyalists—their acts must be restrained as a prudential measure against injury to the patriot cause. Having the power, and believing themselves to be in the right, the Whigs took decisive measures to that end. Imprisonment or other odious restraint at home, or banishment, was the alternative presented. To a large proportion of the loyalists the latter horn of the dilemma appeared the least affliction, and many hundreds abandoned their country and fled to Nova Scotia or to England; while a considerable number, especially of the young men, were embodied in military corps, and took up arms against their Whig countrymen.

This embodiment was undertaken by the deposed Governor Tryon, of New York. He was ably seconded by Oliver De Lancey, brother of a lieutenant-governor of the province of New York, and Courtlandt Skinner, of New Jersey. But these loyalist corps numbered far less, for a long time, than the ministry or their partisans in America anticipated. The greatest exertions of the three leaders above named had not caused an enrolment of over 1,200 of them as late as the spring of 1777. Afterwards the number greatly increased, though there were not a great many in the field at one time. Sabine estimates the whole number enrolled during the Revolutionary War at 20,000. The first organization was under Lord Dunmore in Virginia and Martin in North Carolina, in 1775. Later there were loyalists under Sir John Johnson and Colonel Butler in New York; also under Tryon and De Lancey in the same State, and

Skinner, of New Jersey. Later still the loyalists of the Carolinas, who were numerous in the western districts, were embodied under Maj. Patrick Ferguson, killed at King's Mountain in 1781. Altogether, there were twenty-nine or thirty regiments, regularly officered and enrolled. The most noted loyalist corps in the war was that of the Queen's Rangers, led by Major Simcoe, afterwards governor of Canada.

The loyalists were of two kinds. Some were honorable, conscientious men, governed by principle, and friends of the British government by conviction; others were selfish and unscrupulous, siding with the supposed stronger side for purposes of gain, spite, or opportunities for plunder and rapine under legal sanction. The majority of the latter class filled the military ranks, and their oppressions and cruelties excited the fiercest animosities of the Whigs, who suffered dreadfully. They were made to hate the name of Tory, and in many instances the aversion was felt for at least two generations in Whig families towards the descendants of Tories. Banishments and confiscations by the Whig authorities were popular; but when peace came and animosities subsided, mercy and justice combined to do right. In the negotiation of the treaty of peace (1782), the British commissioners claimed indemnity for the losses of the loyalists. It was denied on the ground that the Whigs during the war had really suffered greater losses through the acts of the Tories, and the claim was not allowed.

At the close of the war the military organizations of the loyalists were disbanded, and some of the officers were transferred to the royal army and continued in service for life. Others, less fortunate, went with a host of civil and military companions into exile, the northern ones chiefly to Nova Scotia, New Brunswick, and Canada, and the southern ones to the Bahamas, Florida, and the British West Indies. Many also went to England, and for years were importunate petitioners for relief from the British government. The officers generally received half pay. Towards the close of 1782 the British Parliament appointed a committee to attend to the claims of the loyalists. By their decision (June, 1783) the sum of \$216,000

TORNADO—TORONTO

was to be distributed annually among 687 loyalist pensioners. The claimants finally became so numerous that a permanent board of commissioners was appointed, which continued about seven years. On March 25, 1784, the number of claimants was 2,063, and the aggregate amount of property claimed to have been destroyed or confiscated, besides debts which they had lost, was about \$35,000,000. In 1790 the Parliament settled the whole matter by enactment. Altogether, nearly \$15,000,000 were distributed among the American loyalists by the British government. It was regarded as a most generous act in a nation which had expended nearly \$100,000,000 in the war, and by it lost a vast and valuable domain.

Tornado, a violent storm of high velocity; named from the Spanish because of the turning and twisting of an air-current. In the United States the tornado is quite a common occurrence in sections east of the great plains; in the spring in most of the Southern States, and in both spring and summer in some of the Northern States. A tornado is frequently and erroneously given the name of cyclone, but while a cyclone may be several hundred miles in diameter and only a mile or two deep, a tornado is usually only a few score feet in diameter and only several hundred feet high. The cyclone may last several days, while the life of a tornado is generally limited to an hour or two.

government remained until 1841, when Upper and Lower Canada (now Ontario and Quebec) formed a legislative union. When the confederation was formed, in 1867, Toronto, the name by which York had been known since 1834, became the permanent seat of government for Ontario. In the winter of 1812-13 the American Secretary of War (John Armstrong) conceived a new plan for an invasion of Canada. He did not think the American troops on the northern frontier sufficiently strong to attack Montreal, and he proposed instead to attack successively Kingston, York (now Toronto), and Fort George, near the mouth of the Niagara River, thus cutting off the communication between Montreal and Upper Canada. As the British had a sloop-of-war on the stocks at York, another fitting out there, and a third repairing, Dearborn and Chauncey were of opinion that the surest way to secure the supremacy of Lake Ontario, and so make an invasion successful, would be to attack York first. This proposition was sanctioned by the President, and at the middle of April (1813) Chauncey and Dearborn had matured a plan of operations with a combined land and naval force. It was to cross the lake and capture York, and then proceed to attack Fort George. At the same time troops were to cross the Niagara River and capture Fort Erie, opposite Buffalo, and Fort Chippewa, below, join the victors at Fort George, and

all proceed to capture Kingston. With 1,700 troops under the immediate command of Brig.-Gen. Zebulon M. Pike, Dearborn sailed in Chauncey's fleet from Sackett's Harbor, April 25, and on the morning of the 27th the armament appeared before

YORK (TORONTO) IN 1813, FROM THE BLOCK-HOUSE EAST OF THE DON.

Toronto, the name of an Indian village when Governor Simcoe made it the capital of Upper Canada in 1794, and named it York. There the seat of the provincial

York. Chauncey's fleet consisted of the new sloop-of-war *Madison*, twenty-four guns, the brig *Oneida*, and eleven armed schooners.

TORONTO

York was then the headquarters of General Sheaffe, at the head of regulars and Indians. It was intended to land at a clearing near old Fort Toronto, but a strong easterly wind drove the boats in which the troops had left the fleet farther westward, and beyond any effectual covering by the guns of the navy. Major Forsyth and his riflemen led the van in landing. When within half rifle-shot of the shore they were assailed by a deadly volley of bullets from a company of Hungarian men and a party of Indians concealed in the woods. Pike, from the deck of the *Madison*, saw this, and, jumping into a boat, ordered his staff to follow. Very soon he was in the midst of a sharp fight between Forsyth's men and the party on shore. The main body

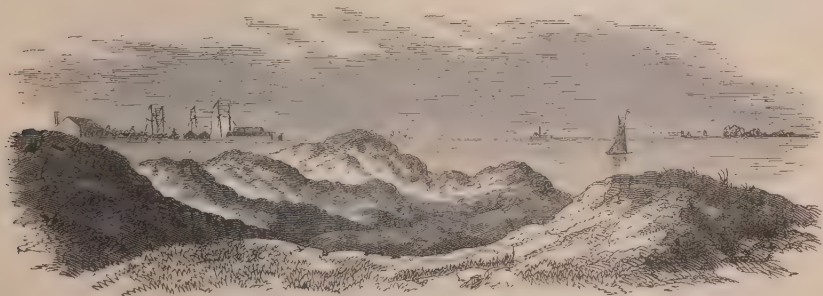

soon followed, and the British were driven back to their works near the town. The Americans, led by Pike, followed closely and captured two redoubts, and at the same time Chauncey hurled deadly volleys of grape-shot on the foe from his guns. Heavy ordnance had been landed, and these were pressed forward with great fatigue over the many ravines. The Indian allies of the British, frightened by the cannon, deserted Sheaffe, and the latter fell back to the Western Battery, mounting 24-

pounders. Pike's men were about to storm it, and Chauncey's round-shot were pounding it, when the wooden magazine of the battery, which had been carelessly left open, exploded, killing some of the garrison and seriously damaging the works. The dismayed enemy spiked the cannon and retired to a battery nearer the town. That, too, was soon abandoned, and Sheaffe and his men fled to the garrison, near the governor's house, and then opened a fire of round and grape shot upon the Americans.

THE POWDER-MAGAZINE BLOWN UP BY THE BRITISH

The great guns of the British were soon silenced, and the Americans expected every moment to see a white flag displayed from the block-house, when a sudden and awful calamity occurred. General Pike was sitting upon a stump conversing with a huge British sergeant who had been taken prisoner, and with his staff around him, when a sudden tremor of the ground was felt, followed by a tremendous explosion near the British garrison. The enemy, despairing of holding the place, had blown

REMAINS OF THE WESTERN BATTERY IN 1860.

TORONTO

up their powder-magazine, situated upon the edge of the lake, at the mouth of a ravine. Fragments of timber and huge stones, of which the magazine walls were built, were scattered in every direction over a space of several hundred feet. By that

victory when the British ensign was pulled down at York. He lingered several hours. Just before he expired that flag was brought to him. He made a sign for it to be placed under his head, and in that position he died. The port and village of

OLD FORT AT TORONTO IN 1860.

explosion fifty-two Americans were slain and 180 wounded. Forty of the British also lost their lives. General Pike, two of his aides, and the captive sergeant were mortally hurt. The terrified Americans scattered in dismay, but were soon rallied, the column was reformed, and Col. Cromwell Pearce, of Pennsylvania, assumed the command.

The Americans pressed forward to the village, where they were met by the civil authorities of the town, who surrendered the place, together with 290 regulars and the militia. With them were also taken the war-vessel (the *Duke of Gloucester*) and a large quantity of naval and military stores. The loss of the Americans in the capture of York, in killed and wounded on land, was 269; and on the fleet, seventeen. The British loss, besides the prisoners, was 149. General Pike was crushed between two stones, and was carried on board the *Pert*, then Chauncey's flag-ship. His numbed ears heard the shout of

York were abandoned by the Americans, for they were of little value to them. General Sheaffe, taking advantage of the confusion after the explosion, and the time purposely consumed in the capitulation, after destroying some vessels on the stocks and some storehouses, escaped with the larger portion of the regulars to Kingston. After the Americans left, the fort at Toronto was repaired, and has been garrisoned ever since, only the barracks being kept in order.

When the Americans took possession of York, the Parliament-house and other public buildings were burned by an unknown hand. It was said that the incendiary was instigated by the indignation of the Americans, who found hanging upon the wall of the legislative chamber a "human scalp," for which commodity Proctor had paid bounties when at Fort Malden. It is not pleasant to relate a fact so discreditable; but, as a British historian (Auchinleck), has intimated that the scalp in

TORPEDO BOATS—TORPEDOES

question—was taken from the head of a British Indian "shot, while in a tree," by that officer when the Americans advanced. the fair fame of a dead man demands the revelation of the truth. Chauncey was not on shore at York. A few days after the capture of that city he wrote to the Secretary of the Navy: "I have the honor to present to you, by the hands of Lieutenant Dudley, the British standard taken at York on the 27th of April last, accompanied by the mace, over which hung a human scalp. These articles were taken from the Parliament-house by my officers."

Torpedo Boats, small vessels built for speed and fitted with tubes for firing torpedoes by compressed air, gunpowder, or electricity. The United States navy has a large fleet of steel torpedo boats in commission and a number under construction. See SUBMARINE BOATS.

Torpedoes. The government of the United States, like that of Great Britain, refused to make use of Fulton's torpedoes in warfare, but it was attempted by individuals against the British blockading squadron. In New York Harbor a schooner named the *Eagle* was used as a torpedo-vessel. In her hold John Scudder, Jr., originator of the plot, placed ten kegs of gunpowder, with a quantity of sulphur mixed with it, in a strong cask, and surrounded it with huge stones and other missiles, which, in the event of an explosion, might inflict great injury. At the head of the cask, in the inside, were fixed two gunlocks with cords, attached to their triggers at one end, and two barrels of flour at the other end, so that, when the flour should be removed, the lock would be sprung, the powder ignited, and the terrible mine exploded. The *Eagle*, commanded by Captain Riker, sailed for New London late in June, 1813, where, as was intended, she was captured by armed men in boats sent from the *Ramillies*, Commodore Hardy's flag-ship. The crew of the *Eagle* escaped to the shore and watched the result. An unavailing attempt was made to get the *Eagle* alongside the *Ramillies*, for the purpose of transferring her cargo to that ship. Finally boats were sent out as lighters, and when the first barrel of flour was removed the explosion took place. A volume of fire shot up from the *Eagle* fully 200

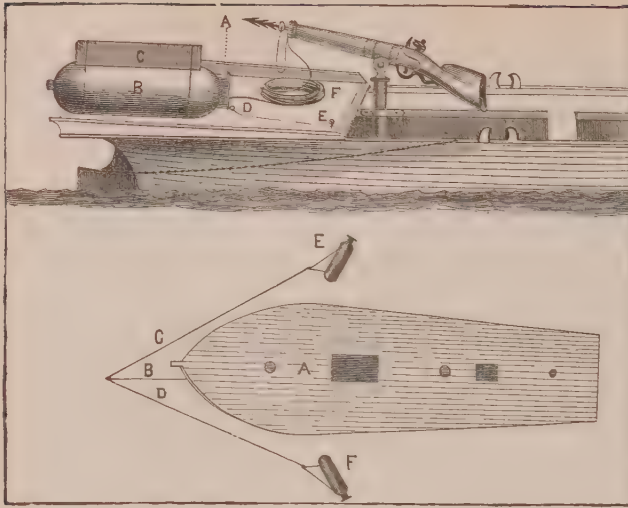

feet in height, and a shower of pitch and tar fell on the deck of the *Ramillies*. The *Eagle* and the first lieutenant and ten men of the *Ramillies* were blown into atoms, and some of the occupants of boats near were fatally injured. This was followed by an attempt to explode a torpedo under the *Ramillies*.

A citizen of Norwich, Conn., acquainted with Bushnell's torpedo, invented a submarine boat, in which he voyaged under water at the rate of 3 miles an hour. Three times he went under the *Ramillies*, and on the third occasion had nearly fastened the torpedo to the ship's bottom, when the breaking of a screw baffled the attempt. He was discovered, but escaped. A fisherman of Long Island, named Penny, made attempts on the *Ramillies* with a torpedo in a whale-boat, and Hardy was kept continually on the alert. He kept the *Ramillies* constantly in motion, and caused her bottom to be swept with a cable every two hours, night and day. Finally he warned the inhabitants that if such warfare was not discontinued he would proceed to burn the town. The warning was effectual.

In July, Mr. Mix, of the navy, attempted to blow up the *Plantagenet*, seventy-four guns, with a torpedo. She was lying off Cape Henry, Va. Under cover of intense darkness, the torpedo was carried out in an open boat called the *Chesapeake Avenger*, and dropped so as to float down under the ship's bow. It exploded a few seconds too soon. A column of water 25 feet in diameter, half-luminous with lurid light, was thrown up at least 40 feet high, with an explosion as terrific as thunder, producing a concussion like the shock of an earthquake. It burst at the crown, and water fell in profusion on the deck of the *Plantagenet*. At the same moment she rolled into the chasm made by the explosion, and nearly upset.

Torpedoes were also placed at intervals across the Narrows, at New York, and at the entrance to the harbor of Portland. The impression prevailed in the British navy that the United States government had adopted Fulton's torpedoes, and this made the British commanders on our coast very circumspect. No doubt the fear of torpedoes saved the American coast-towns from plunder and the torch. Torpedo war-

fare was much practised in the Civil War. The torpedoes used by the Confederates were various in form and construction. The most efficient ones were the galvanic and percussion. The former were provided with a wire connected with a gal-

PERCUSSION TORPEDO—NO. 1.

vanic battery on the shore, by which the mine might be exploded at any moment. The percussion or "sensitive" ones exploded by the act of forcible contact. Some of these were made in the form of a double cone, with percussion tubes ar-

PERCUSSION TORPEDO—NO. 2.

ranged around the cylinder thus formed, at the point of contact of the bases of the cones, as seen in the illustration here

given. Others were arranged as No. 2. In the James River the torpedoes were chiefly galvanic. Some were cylindrical, with one end conical, but a greater portion were pear-shaped. These were anchored in the channels or in shallow water, by means of a segment of a hollow iron sphere, called a "mushroom," which was attached to the buoyant mine by a chain. These were generally sunk opposite batteries, where

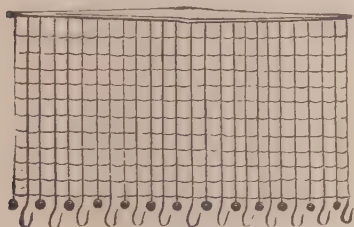

the wires connected with bomb-proofs on shore. ••

One of these, containing nearly a ton of powder, was planted in the centre of the deep channel at Drury's Bluff. On account of the depth of water, it was attached to a long rod, and that to the "mushroom" anchor by a chain, as it was desirable to have the torpedo only the depth of a vessel below the surface. No. 1 was made of a common barrel, with solid pointed ends, made of palmetto-wood, and were used in Charleston Harbor. After the capture of Fort Fisher, vessels were sent to pick up the torpedoes sunk in the Cape Fear River.

As soon as Richmond was evacuated by the Confederates, in April, 1865, a notable expedition was undertaken in search of torpedoes, with which it was known a portion of that river abounded. The expedition consisted of about 300 men in several tugs and thirty small boats, all under the command of Capt. Ralph Chandler, U. S. N. On the morning of April 3, Captain Chandler started from Dutch Gap, with a flotilla and his flagship the *Sangamon*, and before sunset he had so cleared the river of these dangerous obstructions that the passage to Richmond

TORRENS'S LAND SYSTEM—TOTTEN

was made comparatively safe, and the next morning President Lincoln went up to Richmond from City Point in the *Malvern*, Admiral Porter's flag-ship. The fishing was carried on in this wise: The steam-vessels were protected by torpedo-nets formed of ropes weighted with iron or lead, and furnished with hooks to catch the little submarine mines. These nets were hung from spars placed athwart the bowsprit in front of the vessel, and sometimes in like manner along its sides. A net like that at the bow was placed off the stern, and was dragged after the vessel as a fisherman drags his net. No officer in the

TORPEDO-NET.

navy was better qualified for performing this task than Captain Chandler, requiring as it did cool courage and rare judgment. "The knowledge that a simple touch will lay your ship a helpless, sinking wreck upon the water without even the satisfaction of firing one shot in return," wrote Captain Chandler, "calls for more courage than can be expressed, and a short cruise among torpedoes will sober the most intrepid disposition."

Torrens's Land System, a plan of land transfer drawn up by Sir Robert Torrens, and by him put in operation in Australia. It is now used in all the Australian provinces, in Tasmania and New Zealand, and in British Columbia and Ontario, and has been attempted in various parts of the United States. Its object is to make the transfer of land as simple as that of bank stock, and render the title of the holder thereof as free from danger or difficulty as ordinarily the title of the holder of bank stock is to the shares he holds. A land registry is established under the control of an officer known as the master of titles, by whom all land transactions are registered. A title may be registered as

absolute or possessory; if absolute, the title must be approved by the master of titles before the ownership can be registered in fee-simple.

Tortugas, Dry. See DRY TORTUGAS.

Torture. Although various kinds of torture were in use in Europe and Great Britain for many ages, the use of such cruelty was never legally recognized in the British colonies, and it was exceedingly seldom that resort was had to such punishment. A notable exception is found in the case of Giles Corey, a supposed witch in Salem, Mass., who, in 1692, refused to answer any questions on his trial, and was pressed to death, this being the only known instance in America of the infliction of the penalty, known in French as *peine forte et dure*, or pressing to death.

Totem, among savage tribes, especially the North American Indians, the token or symbol of a family or clan; usually an animal or some natural object selected for reverence and superstitious regard. It serves for a sort of surname of the family. Its importance lies in the notion that individuals trace their lineage from it. The turtle, the bear, and the wolf appear to be favored and honored totems among many tribes. The obligations growing out of a common totem are scrupulously regarded. Inter-marriage among those having it was criminal. All such, of whatever clan or tribe, friendly or hostile, have the rights of hospitality, of succor in distress, and of friendship as blood-relations. The totem is never changed.

Totten, CHARLES A. L., military officer; born in New London, Conn., Feb. 3, 1851; graduated at the United States Military Academy in June, 1873; and was commissioned a second lieutenant of the 4th United States Artillery. In 1889 he was appointed military instructor at the Yale Scientific School, and while there gained notoriety as a chronological investigator. His eccentric speculations as to the length of time that the earth had existed, and his prophecy, which he based on the book of Daniel, that the world would come to an end in 1895, along with many other similar teachings, made him the object of much ridicule and subjected Yale University to severe criticism. He was therefore notified in April, 1892, that he would be relieved of his instruc-

TOTTEN--TOWN-MEETINGS

torship on Aug. 1, 1892. He resigned from the army in 1892; died at Milford, Conn., April 12, 1908.

Totten, JOSEPH GILBERT, military officer; born in New Haven, Conn., Aug. 23, 1788; graduated at West Point in 1805, and was chief engineer of the army on the Niagara frontier in 1812-13. For meritorious services in the capture of Fort George he was brevetted major in June, 1813. He was chief engineer of Generals Izard and Macomb on Lake Erie in 1814, and was brevetted lieutenant-colonel for gallantry in the battle of Plattsburg. He was chief engineer of the army of General Scott in the siege of Vera Cruz in 1847, and brevetted brigadier-general. From 1846 to 1864 he was a regent of the Smithsonian Institution, and in the Civil War was chief engineer of the United States army. He was brevetted major-general, United States army, the day before his death, in Washington, D. C., April 22, 1864. He was author of an able *Report on the Subject of National Defences* (1851), and translator of *Vicat on Mortars*.

Toucey, ISAAC, statesman; born in Newtown, Conn., Nov. 5, 1796; received a private education; admitted to the bar in 1818; practised at Hartford, Conn.; member of Congress in 1835-39; governor of Connecticut in 1845. He served as Attorney-General of the United States in 1848-49; as a United States Senator in 1852-57; and as Secretary of the Navy in 1857-61. He died in Hartford, Conn., July 30, 1869.

Tourgee, ALBION WINEGAR, jurist; born in Williamsfield, O., May 2, 1838; graduated at Rochester University in 1862; admitted to the bar in 1864; served in the Civil War; wounded twice and imprisoned for six months in Libby prison; United States consul at Bordeaux in 1897-1903; then consul-general at Halifax, and again consul at Bordeaux, where he died May 21, 1905. He was author of *A Fool's Errand*; *An Appeal to Cæsar*; *War of the Standards*; *Digest of Cited Cases*, etc.

Tourjee, EBEN, musician; born in Warwick, R. I., June 1, 1834; was organist of a church when thirteen years old; removed to Providence, where he opened a music store and began teaching when seventeen, and in 1859 to Greenwich,

where he founded the Musical Institute. He studied in Europe in 1863-67; removed the Musical Institute to Boston, and changed its name to the New England Conservatory of Music; with Patrick S. Gilmore organized the World's Peace Jubilee in 1872; and organized and conducted the large chorus of the Music Hall Society in 1876. He died in Boston, Mass., April 12, 1891.

Touro, JUDAH, philanthropist; born in Newport, R. I., June 16, 1775; engaged in mercantile business in New Orleans in 1802, where he acquired a large fortune. He gave considerably to charity during his life; and, at his death, in New Orleans, La., Jan. 18, 1854, he bequeathed most of his property to the public charitable institutions of that city.

Toussaint, FRANÇOIS DOMINIQUE. See SANTO DOMINGO.

Tower, CHARLEMAGNE, diplomatist; born in Philadelphia, Pa., April 17, 1848; graduated at Harvard College in 1872; admitted to the bar in 1878; president of the Duluth and Iron Range Railroad in 1882-87; United States minister to Austria-Hungary in 1897-99, ambassador to Russia in 1899-1902, and ambassador to Germany since 1902. He is the author of *The Marquis de La Fayette in the American Revolution* (2 volumes).

Town-meetings, the conspicuous feature in New England colonial politics, and the promoter and conservator of free speech, a free press, and a spirit of liberty which pervaded the whole population. It was the fruitful seed of republicanism. In the town-meetings its taxes were voted and its affairs discussed and settled. Therein the agents and public servants of each town were annually elected by a free ballot, and there abstract political principles were debated. By these discussions an intelligent public sentiment was created concerning the rights of man, and particularly the rights of Englishmen in America, which was ready to support, by its power, the champions of freedom in the great struggle for justice, and finally for independence. It was this latter feature of the town-meeting that excited the opposition of the crown officers, who called it a "focus of rebellion." They hated and feared it.

Prof. John Fiske, in his illuminating

TOWN-MEETINGS—TOWNSEND

essay on the town-meeting, has set forth its origin and relation to German, English, and American history in the most brilliant manner. We give a few short extracts from the same.

Immediately on their arrival in New England the settlers proceeded to form for themselves a government as purely democratic as any that had ever been seen in the world. Instead of scattering about over the country, the requirements of education and of public worship, as well as of defence against Indian attacks, obliged them to form small village communities. As these villages multiplied, the surface of the country came to be laid out in small districts (usually from 6 to 10 miles in length and breadth) called townships. Each township contained its village, together with the woodlands surrounding it.

From the outset the government of the township was vested in the town-meeting. Once in every year a meeting is held, at which every adult male residing within the limits of the township is expected to be present, and is at liberty to address the meeting or vote upon any question that may come up.

At each annual town-meeting there are chosen not less than three or more than nine selectmen, a town clerk, a town treasurer, a school committee, assessors of taxes, overseers of the poor, constables, surveyors of highways, fence viewers, and other officers. In very small townships the selectmen themselves may act as assessors of taxes or overseers of the poor. The selectmen may appoint police officers if such are required; they may act as a board of health; in addition to sundry specific duties too numerous to mention here, they have the general superintendence of all the public business, save such as is expressly assigned to the other officers; and whenever circumstances may seem to require it, they are authorized to call a town-meeting.

Besides choosing executive officers, the town-meeting has the power of enacting by-laws, of making appropriations of money for town purposes, and of providing for miscellaneous emergencies by what might be termed special legislation.

It is only in New England that the township system is to be found in its

completeness. In several Southern and Western States the administrative unit is the county, and local affairs are managed by county commissioners elected by the people. Elsewhere we find a mixture of the county and township systems. In some of the Western States settled by the New England people, town-meetings are held, though their powers are somewhat less extensive than in New England.

But something very like the "town-meeting principle" lies at the bottom of all the political life of the United States. To maintain vitality in the centre without sacrificing it in the parts; to preserve tranquillity in the mutual relations of forty powerful States, while keeping the people everywhere as far as possible in direct contact with the government, such is the political problem which the American union exists for the purpose of solving, and of this great truth every American citizen is supposed to have some glimmering, however crude.

Towne, CHARLES ARNETTE, born in Oakland county, Mich., Nov. 21, 1858; educated at the University of Michigan; admitted to the bar in 1886; removed to Duluth, Minn., in 1890; member of Congress in 1895-97; withdrew from the Republican convention in 1897; nominated for Vice-President by the People's party and by the Silver Republicans in 1900. He declined both nominations, and was a United States Senator for two months in 1900-01, filling a vacancy, and member of Congress in 1905-07.

Townsend, EDWARD DAVIS, military officer; born in Boston, Mass., Aug. 22, 1817; graduated at West Point in 1837; served in the Seminole and Mexican wars. He was adjutant-general of the United States during the Civil War. He died in Washington, D. C., May 11, 1893.

Townsend, GEORGE ALFRED, journalist; born in Georgetown, Del., Jan. 30, 1841; educated in Philadelphia, Pa.; entered journalism in 1860; was war correspondent for the *New York World* in 1864-65, under the pen-name of GATH. He is the author of *Real Life of Abraham Lincoln*; *Washington Outside and Inside*; *Mormon Trials*; *Washington Rebuilt*; *The Entailed Hat*; *Life of Levi P. Morton*, etc.

Townsend, JOHN KIRK, naturalist; born in Philadelphia, Pa., Aug. 10, 1809;

TOWNSEND—TRACY

was associated with John J. Audubon in the preparation of *American Ornithology*; travelled through the West in 1833-37; visited the Sandwich Islands and South America; and later had charge of the department of birds in the Smithsonian Institution. While in Washington he studied dentistry; was a member of the Philadelphia Academy of Sciences and a contributor to its *Proceedings*; and was author of *A Narrative of a Journey Across the Rocky Mountains to the Columbia River*; and *Ornithology of the United States*. He died in Washington, D. C., Feb. 16, 1851.

Townsend, THOMAS S., compiler; born in New York City, Aug. 27, 1829; received a classical education, and later entered a mercantile firm in New York City. In 1860 he began a chronological history of every important occurrence in connection with the impending Civil War, by clipping from the newspapers every statement of value relating to the subject and the record of every military officer in both armies. His collection comprised 120 volumes, and

is now in the library of Columbia University, New York. He delivered many lectures and addresses on the Civil War.

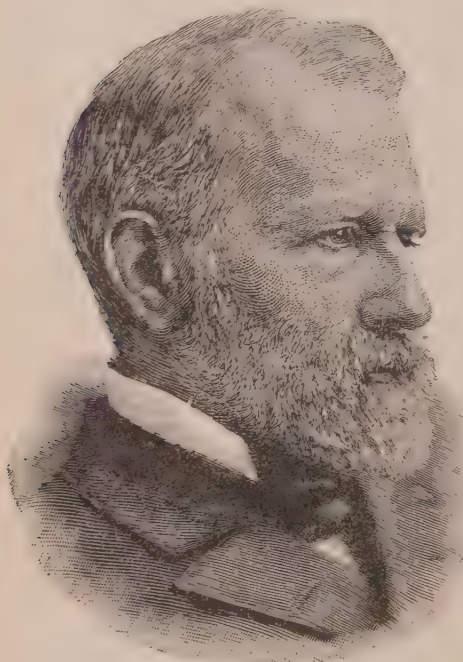

Townshend, GEORGE, first Marquis, military officer; born in Norfolk, England, Feb. 28, 1724; commanded a division under Wolfe in the expedition against Quebec, and took command of the army after the death of that general, receiving the capitulation of the French. He then returned to England, and was a member of Parliament ten years (1754-64). He became a field-marshal and privy councillor; was lord-lieutenant of Ireland (1767-72), and was created marquis in October, 1787. He died Sept. 14, 1807.

Towson, NATHAN, artillery officer; born near Baltimore, Md., Jan. 22, 1784; was appointed captain of artillery in March, 1812, having had some experience in that service as commander of a volunteer artillery company; was sent to the Niagara frontier; and there, in 1813-14, performed distinguished services. He bore a prominent part in the battles of Chippewa and

Lundy's Lane; also in the defence of Fort Erie. In 1816 he was brevetted lieutenant-colonel, and was made paymaster-general in 1819. In March, 1849, he received the brevet of major-general for "meritorious services during the Mexican War." He died in Washington, D. C., July 20, 1854.

Tract Society. The first denominational tract society in the United States was formed in Boston in 1803. In 1814 a society was formed at Andover, Mass., which, in 1823, made its abode in Boston, with the name of the American Tract Society. Another American Tract Society was formed in New York in 1825, and a union of all was effected. In 1859, because of the society's hesitancy to publish tracts on the subject of slavery, the Boston society withdrew. A colporteur system was established in 1842, and the colporteurs disposed of a vast number of tracts. The various denominations also have tract societies.

Tracy, BENJAMIN FRANKLIN, lawyer; born in Oswego, N. Y., April 26, 1830; became an influential Republican politician, and a prominent lawyer in New York; raised two regi-

BENJAMIN FRANKLIN TRACY.

TRADE—TRADES UNIONS

ments for the Civil War; commissioned colonel of the 109th New York Volunteers; was severely wounded at the battle of the Wilderness; brevetted brigadier-general in 1865; received a congressional medal of honor for gallantry in battle. After the war he served as United States district attorney and associate judge of the court of appeals; and was Secretary of the Navy in President Harrison's cabinet, 1889-93. At the close of his term he returned to the practice of law; was president of the commission which drafted the charter for the Greater New York; and unsuccessful candidate for mayor under this charter.

Trade, BOARDS OF. See CHAMBERS OF COMMERCE.

Trade, FOREIGN. See COMMERCE OF THE UNITED STATES.

Trade and Plantations, BOARDS OF. The first of these commissions was suggested by Davenant, son of Sir Wm. Davenant. He proposed, in an essay, that the care of the American colonies should be made "the province of a select number of lords and gentlemen of reputation both for parts and fortunes"; and suggested that it would be in their power "to put things into a form and order of government that should always preserve these countries in obedience to the crown and dependence upon the kingdom." At the same time, he advocated the keeping of the conditions of their charters sacred and inviolate. A standing council of commerce had been established, but in 1673 it was dropped. From that time until 1696 all disputes and regulations relating to commerce and the colonies were usually referred to a committee of the privy council.

The board of trade and plantations was established by King William III. in that year. It consisted of a first lord commissioner, who was a peer of the realm, and seven other commissioners, with a salary of \$5,000 each. The members of the board were styled the "lord commissioners for trade and plantations." With this board the governors of the English-American colonies held continual correspondence concerning their respective governments; and to this board they transmitted the journals of their councils and assemblies, the accounts of the collectors of customs and naval officers, and similar articles of official intelligence. On

the death of Queen Anne, the new ministry reduced the powerful board of trade to a subordinate position—a mere committee for reference and report, and a dependent upon the secretary of state for the colonies. In March, 1749, Horace Walpole, at the instigation of the board of trade and plantations, reported a bill to overrule all charters, and to make the orders of the King, or under his authority, the supreme law in America. This seemed to be consistent with the high claim of legislative authority for Parliament. Onslow, speaker of the House of Commons, believed the Parliament had power to tax America, but not to delegate it. He ordered the objections to the measure to be spread at length on the journals of the House, and the board of trade dropped the matter.

Trade Dollar, a silver dollar containing 378 troy grains of silver and 42 troy grains of alloy. Dollars of this description, issued under act of Congress of Feb. 12, 1873, were legal tender to amount of \$5. Those issued under act of July 22, 1876, possessed no legal-tender power. The trade dollars were intended for trade with countries doing business on a silver basis; hence the name. See COINAGE, UNITED STATES.

Trade Expansion. See COMMERCE OF THE UNITED STATES.

Trades Unions. The first local labor unions arose in 1800-25. They multiplied from 1815 up to the time of the Civil War, though the movement was opposed by the press, and employers combined to suppress it. The first central labor union in the United States was the General Trades Union, established in New York (1833). In 1850 the Typographical Union was formed. Employers at first opposed, but later all endured, while most welcomed and supported it. The hatters combined in 1854, the iron-workers in 1858, the machinists in 1859, etc., till, in 1860, twenty-six labor unions existed. International labor organizations were formed by the cigar-makers (1864), the engineers (1864), the masons (1865). Among other unions were those of the conductors (1868), wool-hatters (1869), locomotive firemen (1869), furniture-makers (1873), horseshoers (1875), granite-cutters (1877), coal-miners (1885), bakers (1886), tailors, plasterers, carpenters,

TRADES UNIONS—TRANSYLVANIA

glass-workers, bottle-blowers, plumbers, boiler-makers, piano-makers, bookkeepers, lithographers, stereotypers, switchmen, spinners, and, lastly, messenger-boys. Women, too, organized their callings, till the unions were universal. Their objects have always been substantially the same—viz., short hours, higher wages, laws to better the laborer's lot, the payment of the same wages to women and men for the same work, the protection of laborers in factories and while on duty, the prevention of unorganized and useless strikes, of the labor of children under fourteen years of age, etc.

The National Labor Union was called to order Feb. 22, 1861. It pushed the homestead law, and obtained an eight-hour working-day for government employés (1868), but, with its successor, the Industrial Brotherhood, both having entered into politics, had ceased to exist by 1875.

In 1869 was formed in Philadelphia the first association of the Knights of Labor, a limited, social, and (at first) secret organization. One of its objects was to harmonize labor and capital, while decrying strikes, idleness, and frivolity. It also collected the statistics of its members, and strove to promote intelligence among them. In 1877 it engaged in the great strike on the Baltimore and Ohio Railroad and the Pennsylvania Railroad to resist a reduction in wages. By 1877 it had 450 societies; in 1901 it claimed a membership of 200,000; the organization became national in 1878. It organized labor bureaus in twenty-eight States; in 1884 the United States bureau of labor was established; in 1888 the department of labor, at Washington. Friction has always existed between the American Federation of Labor and the Knights of Labor, from the fact that, while both desire in the main the same ends, each favors a different means, the Knights advocating centralization, while the Federation of Labor would have each union govern itself.

The following national unions are also not affiliated with the American Federation of Labor; Bricklayers' and Masons', Locomotive Engineers, Locomotive Firemen and Enginemen, Railroad Trainmen, Railroad Conductors, and the Western Federation of Miners. See LABOR, AMERICAN FEDERATION OF; LABOR, INDUSTRIAL.

Train, GEORGE FRANCIS, author; born in Boston, Mass., March 24, 1829; engaged in business in Boston for several years; went to Australia in 1853; travelled extensively through England, where he lectured to large audiences; returned to the United States in 1862, and wrote *An American Merchant in Europe, Asia, and Australia*; *Young America Abroad*; *Young America in Wall Street*; etc. He died in New York City, Jan. 18, 1904.

Transcendentalism, a term derived from the Latin *transcendere*, to go beyond, and applied to that doctrine of the school of philosophy in New England which was founded by RALPH WALDO EMERSON and A. BRONSON ALCOTT (q. v.).

Transportation. See RAILROADS; STEAMBOATS.

Transylvania. While the English population on the Atlantic seaboard were in great political commotion in the early part of 1775, efforts were in progress to form a new commonwealth in the valley of the Mississippi. Richard Henderson, an energetic lawyer of North Carolina, and a land speculator, induced by the reports of Finley, Boone, and others of the fertile regions on the banks of the lower Kentucky River, purchased of the Cherokees for a few wagon-loads of goods a great tract of land south of that river. Others were associated with him; and the adventurer Daniel Boone, who had been present at the treaty, was soon afterwards sent (March, 1775) to mark out a road and to commence a settlement. He built a palisaded fort on the site of Boonesboro, Madison co., Ky. At about the same time Col. James Harrod, an equally bold backwoodsman, founded Harrodsburg. Governor Dunmore, of Virginia, denounced Henderson's purchase as illegal and void, and offered these western lands for sale under the crown. Regardless of the proclamation, delegates from Boonesboro, Harrodsburg, and two other settlements, eighteen in number, met at Boonesboro, and organized themselves into an Assembly of a State which they named Transylvania by appointing Thomas Slaughter chairman, and Matthew Jewett clerk. They were addressed by Henderson on behalf of the proprietors, between whom and the settlers a compact was made, the most important features of which were an agree-

TRASK—TREASON

mert—1. That the election of delegates should be annual; 2. Perfect freedom of opinion in matters of religion; 3. That judges should be appointed by the proprietors, but answerable for bad conduct to the people; and, 4. That the Convention or Assembly have the sole power of raising and appropriating all moneys, and of electing their treasurers. Courts and a militia were organized, and laws were enacted. The proprietors held a meeting in September at Oxford, Greenville co., N. C., and elected James Hogg a delegate for Transylvania in the Continental Congress, but the claim of Virginia to the territory of the new commonwealth was a bar to his admission. The legislature of Virginia afterwards annulled the purchase of Henderson, and the inchoate State disappeared. Virginia gave Henderson a tract of land on the Ohio 12 miles square, below the mouth of Green River.

Trask, WILLIAM BLAKE, historian; born in Dorchester, Mass., Nov. 25, 1812; received a common school education; was apprenticed to a cabinet-maker, and worked at his trade in 1823-35; was on the school committee of Dorchester; and became assessor in 1850, which he resigned soon after, owing to failing health. Later he became interested in historical studies. He copied the ancient town records of Boston; aided Gen. William H. Sumner in preparing a *History of East Boston*; contributed to the *New England Historical and Genealogical Register*; and aided in preparing several genealogies; and published *Memoir of Andrew H. Ward*; *Baylie's Remarks on General Cobb*; *The Bird Family*, and *The Seaver Family*. He was a member of the Dorchester Antiquarian and Historical Society, and the New England Historic-Genealogical Society, and was its historiographer in 1861-68.

Travis, WILLIAM BARRETT, military officer; born in Conecuh county, Ala., in 1811; admitted to the bar in 1830 and began practice in Claiborne, Ala.; went to Texas about 1832 and later joined the Texas army and fought for the independence of that territory. With 140 men he defended Fort Alamo (the old mission station of San Antonio de Valerio) against 4,000 Mexicans, Feb. 23, 1836. The place was stoutly defended for ten days; numerous appeals were made for aid, but only

thirty-two men succeeded in passing the Mexican lines. After frequent attacks had been repulsed with great slaughter a hand-to-hand fight occurred on March 6, in which the Texans were not overcome until only six of their number were left alive, including Travis, David Crockett, and James Bowie. These surrendered after a promise of protection had been made, but when they were taken before Santa Ana, near San Antonio, on the same day he gave orders to cut them to pieces. Shortly afterwards, during the battle at San Jacinto, where the Mexicans met a bloody defeat, the battle cry was "Remember the Alamo." See ALAMO, FORT.

Treason. The first clause of section iii., article 3, of the national Constitution says: "Treason against the United States shall consist only in levying war against them, or in adhering to their enemies, giving them aid and comfort." In consequence of the disturbances in western North Carolina (see FRANKLAND) and symptoms of disaffection on the southwestern border, and in Kentucky, the Virginia legislature passed a law in October, 1785, subjecting to the penalties of treason all attempts to erect a new State in any part of her territory without permission first obtained of the Assembly. Pennsylvania had passed a similar law.

When Admiral Farragut arrived before New Orleans (April 28, 1862), he sent Captain Bailey ashore with a flag to demand the surrender of the city. The military commander (Lovell) turned over the whole matter to the civil authorities. The demand was refused. Meanwhile a force had landed from one of the vessels and hoisted the National flag over the Mint. As soon as they retired a gambler, named William B. Mumford, with some young men, tore down the flag and dragged it through the streets in derision. This act was hailed with acclamations of approval by the Confederates of the city, and paragraphs of praise and exultation appeared in the New Orleans journals. General Butler arrived with 2,000 troops (May 1), and took possession of the city. His headquarters were at the St. Charles Hotel, before which a threatening crowd gathered. Among them was Mumford, who openly boasted of his exploit in humbling the "old rag of the United States."

TREASURY—TREATIES

He became so dangerous to good order as the leader of the turbulent spirits in New Orleans that Butler had him arrested and tried for treason. He was found guilty and executed—the only man who, up to 1901, had been tried, found guilty, and suffered death for that crime since the foundation of the national government. In 1901, after the death of President McKinley by an assassin's bullet, there was a wide-spread opinion that Congress should pass an act making an attack on the person of the President of the United States, whether fatal or not, an act of treason.

Treasury, DEPARTMENT OF THE, one of the executive departments of the United States government. The chief officer is officially known as the Secretary of the Treasury, and is charged by law with the management of the national finances. He prepares plans for the improvement of the revenue and for the support of the public credit; superintends the collection of the revenue, and prescribes the forms of keeping and rendering public accounts and of making returns; grants warrants for all moneys drawn from the treasury in pursuance of appropriations made by law, and for the payment of moneys into the treasury, and annually submits to Congress estimates of the probable revenues and disbursements of the government. He also controls the construction of public buildings, the coinage and printing of money, the collection of statistics, the administration of the life-saving, revenue-cutter, the public health, and marine-hospital branches of the public service, and furnishes generally such information as may be required by either branch of Congress on all matters pertaining to the foregoing.

The routine work of the Secretary's office is transacted in the offices of the comptroller of the currency, supervising architect, director of the mint, director of engraving and printing, supervising surgeon-general of the public health and marine-hospital service, general superintendent of the life-saving service, and in the following divisions: bookkeeping and warrants; appointments; customs; public moneys; loans and currency; revenue-cutter; supervising inspector-general of steam-boats; Light-house Board statistics, sta-

tionery; printing and blanks; mails and files; special agents, and miscellaneous. See CABINET, PRESIDENT'S.

Treat, ROBERT, governor; born in England in 1622; came to America with Sir Richard Saltonstall, and was one of the first settlers of Wethersfield, Conn. He was chosen judge, then a magistrate (from 1661 to 1665), and major of the provincial troops in 1670. In King Philip's War he was active in the relief of menaced settlements in the Connecticut Valley, especially of Springfield and Hadley. He aided in the destruction of the Narraganset fort in December, 1676; the same year was lieutenant-governor; and was governor in 1686-1701. He died in Milford, Conn., July 12, 1710.

Treaties. The following is a list of the principal treaties and conventions of the United States with other powers, exclusive of postal conventions. Treaties are indicated by T.; conventions by C.:

In the course of a speech made by Senator Henry Cabot Lodge on Feb. 19, 1912, on the subject of the general arbitration treaties with Great Britain and France, he introduced the following list of arbitration treaties and conventions submitted to and acted upon by the United States Senate.

1. **With Chile:** For arbitration of the "Macedonian" claims. Concluded Nov. 10, 1858; ratified by Senate March 8, 1859; proclaimed Dec. 22, 1859.

2. **With Chile:** Submitting claims of United States citizens to a commission. Concluded Aug. 7, 1892; ratified by Senate December 8, 1892; proclaimed Jan. 28, 1893.

3. **With Chile:** Reviving convention of 1892. Concluded May 24, 1897; ratified Feb. 28, 1899; proclaimed March 12, 1900.

4. **With China:** Referring claims of the United States to a commission. Concluded Nov. 8, 1858; ratified by Senate

March 1, 1859; ratified by President March 3, 1859.

5. **With Colombia:** Referring claims to a commission. Concluded Sept. 10, 1857; ratified by Senate, with amendments, March 8, 1859; proclaimed Nov. 8, 1860.

6. **With Colombia:** Extending foregoing treaty and providing for a new commission. Concluded Feb. 10, 1864; ratified by Senate June 10, 1864; proclaimed Aug. 19, 1865.

7. **With Costa Rica:** Referring United States claims to a commission. Concluded July 2, 1860; ratified by Senate Jan. 16, 1861; proclaimed Nov. 11, 1861.

8. **With Denmark:** Referring claim of Carlos Buttersfield & Co. to arbitration. Concluded Dec. 6, 1888; ratified by Senate Feb. 11, 1889; proclaimed May 24, 1889.

9. **With Ecuador:** Referring United States claims to a commission of two

TREATIES

members and an arbitrator. Concluded Nov. 25, 1862; ratified by Senate, Jan. 28, 1863; proclaimed Sept. 8, 1864.

10. With Ecuador: Submitting claim of Julio R. Santos to arbitration. Concluded Feb. 28, 1893; ratified by Senate Sept. 11, 1893; proclaimed Nov. 7, 1894.

11. With France: Referring claims of United States citizens and French citizens to a commission of three. Concluded Jan. 15, 1880; ratified by Senate March 29, 1880; proclaimed June 25, 1880. (The term of the Claims Commission constituted by the foregoing treaty was extended twice by special convention, first in 1882 and the second time in 1883, on the latter occasion with a Senate amendment.)

12. With Great Britain: The "Jay treaty." Concluded Nov. 19, 1794; ratified, with an amendment not affecting the arbitration clause, June 24, 1795; proclaimed Feb. 29, 1796. In Articles VI and VII certain claims were referred to a commission.

13. With Great Britain: The commission constituted by Article VII of the Jay treaty was continued by special treaty ratified and proclaimed in 1802.

14. With Great Britain: The treaty of Ghent. Concluded Dec. 24, 1814; ratified by Senate and ratifications exchanged at Washington Feb. 17, 1815; proclaimed Feb. 18, 1815. In Article IV of this treaty certain boundary questions are referred to a commission, and for final settlement to a friendly sovereign or state acting as arbitrator.

15. With Great Britain: Convention respecting fisheries, boundary, and restoration of slaves. Concluded Oct. 20, 1818; ratified by Senate January 25, 1819; proclaimed Jan. 30, 1819. In Article V of this treaty certain claims are referred to arbitration.

16. With Great Britain: Indemnity for slaves carried away. Concluded Nov. 15, 1826; ratified by Senate Dec. 26, 1826; proclaimed March 19, 1827.

17. With Great Britain: Referring claims of American and British citizens to a commission. Concluded Feb. 8, 1853; ratified by Senate March 15, 1853; proclaimed Aug. 20, 1853. (The commission constituted by the foregoing convention was extended by special treaty proclaimed in 1854.)

18. With Great Britain: Convention relative to the northeastern boundary, referring the question to arbitration. Concluded Sept. 29, 1827; ratified by the Senate Jan. 14, 1828; proclaimed May 15, 1828.

19. With Great Britain: Reciprocity treaty as to fisheries, duties, and navigation. Article I provided that certain fishery disputes should be referred to a commission. Concluded June 5, 1854; ratified by the Senate Aug. 2, 1854; proclaimed Sept. 11, 1854.

20. With Great Britain: Referring claims of the Hudson's Bay Co. and the Puget Sound Agricultural Co. against the United States to a commission. Concluded July 1, 1863; ratified by Senate Jan. 18, 1864; proclaimed March 5, 1864.

21. With Great Britain: Referring Alabama claims to a tribunal and referring Civil War claims to a commission. Concluded May 8, 1871; ratified by Senate May 24, 1871; proclaimed July 4, 1871.

22. With Great Britain: Referring questions of fur seals in Bering Sea to arbitration. Concluded Feb. 29, 1892; ratified by Senate March 29, 1892; proclaimed May 9, 1892.

23. With Great Britain: Referring Bering Sea claims to a commission. Concluded Feb. 8, 1896; ratified with amendments by Senate April 15, 1896; proclaimed June 11, 1896.

24. With Great Britain: General arbitration treaty. Concluded Jan. 11, 1897; amended and finally rejected by Senate May 5, 1897.

25. With Great Britain: Referring Alaskan boundary disagreement to a tribunal. Concluded Jan. 24, 1903; ratified by Senate Feb. 11, 1903; proclaimed March 3, 1903.

26. With Great Britain: Newfoundland fisheries. Concluded April 4, 1908; ratified Feb. 18, 1909; proclaimed March 4, 1909.

27. With Kongo: Article XIII of this treaty refers any disputes concerning the terms of the treaty to arbitration. Concluded Jan. 24, 1891; ratified by Senate Jan. 11, 1892; proclaimed April 2, 1892.

28. With Mexico: Referring claims of United States citizens to a commission of four members and an umpire. Concluded

TREATIES

April 11, 1839; ratified by Senate March 17, 1840; proclaimed April 8, 1840.

29. With Mexico: Article XXI of this treaty provides for the reference of future disagreements to arbitration. Concluded Feb. 2, 1848; ratified by Senate with amendments not affecting arbitration article March 10, 1848; proclaimed July 4, 1848. (The foregoing reaffirmed in Article VII of the Gadsden treaty, ratified by the Senate with amendments not affecting article and proclaimed in 1854.)

30. With Mexico: Referring claims of both countries to a commission of two members and an umpire. Concluded July 4, 1868; ratified by Senate July 25, 1868; proclaimed Feb. 1, 1869. (The foregoing convention was extended four times by special treaty—in 1871, 1872, 1874, and 1876.)

31. With Mexico: Referring boundary disputes to a commission. Concluded July 29, 1882; ratified by Senate Aug. 8, 1882; proclaimed March 5, 1883. (The commission provided in the foregoing treaty was extended twice—in 1885 and 1889.)

32. With Mexico: Referring all future boundary disputes to a commission. Concluded March 1, 1889; ratified by Senate May 7, 1890; proclaimed Dec. 26, 1890. (This treaty was extended six times—in 1894, 1895, 1896, 1897, 1898, and 1900.)

33. With Paraguay: Referring claim of the United States and Paraguay Navigation Co. against Paraguay to a commission. Concluded Feb. 4, 1859; ratified by Senate Feb. 16, 1860; proclaimed March 12, 1860.

34. With Peru: Referring claims of Peru against United States to an arbitrator. Concluded Dec. 20, 1862; ratified by Senate Feb. 18, 1863; proclaimed May 19, 1863.

35. With Peru: Referring claims of United States and Peru to a commission of five. Concluded Jan. 12, 1863; ratified by Senate, with amendment, Feb. 18, 1863; proclaimed May 19, 1863.

36. With Peru: Referring claims of United States and Peru to two commissioners and two umpires. Concluded December 4, 1868; ratified by Senate April 15, 1869; proclaimed July 6, 1869.

37. With Portugal: Referring *General Armstrong* claim to an arbitrator. Con-

cluded Feb. 26, 1851; ratified by Senate March 7, 1851; proclaimed Sept. 1, 1851.

38. With Samoa: Treaty with Germany and Great Britain referring Samoan disputes to arbitration. Concluded Nov. 7, 1899; ratified by Senate Feb. 21, 1900; proclaimed March 8, 1900.

39. With Spain: Treaty of friendship, limits, and navigation. Concluded Oct. 27, 1795; ratified by the Senate March 3, 1796; proclaimed Aug. 2, 1796. Under Article XXI of this treaty claims were referred to a commission.

40. With Spain: Referring claims for indemnity to a commission. Concluded Aug. 11, 1802; ratified by Senate Jan. 9, 1804; proclaimed Dec. 22, 1818.

41. With Texas: Referring boundary question to a commission. Concluded April 25, 1838; ratified by Senate May 10, 1838; proclaimed Oct. 13, 1838.

42. With Venezuela: Referring claims of United States citizens to a commission of two members and an umpire. Concluded April 25, 1866; ratified by Senate July 5, 1866; proclaimed May 29, 1867.

43. With Venezuela: Constituting a commission to reopen and decide awards under treaty of 1866. Concluded Dec. 5, 1885; ratified by Senate, with amendments, April 15, 1886; proclaimed June 4, 1889. (The foregoing was supplemented by a treaty ratified June 18, 1888, explanatory of its terms, and by a treaty ratified Dec. 5, 1888, extending the time for its ratification.)

44. With Venezuela: Referring the claim of the Venezuelan Steam Transportation Co. against Venezuela to commission of two members and an umpire. Concluded Jan. 19, 1892; ratified by Senate March 17, 1892; proclaimed July 30, 1894.

45. General: Hague convention for pacific settlement of international disputes. Concluded July 29, 1899; ratified by Senate Feb. 5, 1900; proclaimed November 1, 1901.

46. General: Second Hague convention for pacific settlement of international disputes. Concluded Oct. 18, 1907; ratified by Senate April 2, 1908; proclaimed Feb. 28, 1910.

47. General: Pecuniary claims, various Central and South American States. Concluded Jan. 30, 1902; ratified by Senate Jan. 11, 1905; proclaimed March 24, 1905.

TREATIES

48. **With China:** General arbitration; ratified by Senate, 1908.

49. **With Denmark:** General arbitration; ratified by Senate, 1908.

50. **With France:** General arbitration; ratified by Senate, 1908.

51. **With Great Britain:** General arbitration; ratified by Senate, 1908.

52. **With Italy:** General arbitration; ratified by Senate, 1908.

53. **With Japan:** General arbitration; ratified by Senate, 1908.

54. **With Mexico:** General arbitration; ratified by Senate, 1908.

55. **With the Netherlands:** General arbitration; ratified by Senate, 1908.

56. **With Norway:** General arbitration; ratified by Senate, 1908.

57. **With Peru:** General arbitration; ratified by Senate, 1908.

58. **With Portugal:** General arbitration; ratified by Senate, 1908.

59. **With Salvador:** General arbitration; ratified by Senate, 1908.

60. **With Spain:** General arbitration; ratified by Senate, 1908.

61. **With Sweden:** General arbitration; ratified by Senate, 1908.

62. **With Switzerland:** General arbitration; ratified by Senate, 1908.

63. **With Austria-Hungary:** General arbitration; ratified by Senate, 1909.

64. **With Costa Rica:** General arbitration; ratified by Senate, 1909.

65. **With Haiti:** General arbitration; ratified by Senate, 1909.

66. **With Paraguay:** General arbitration; ratified by Senate, 1909.

67. **With the Argentine Republic:** General arbitration; ratified by Senate, 1909.

68. **With Bolivia:** General arbitration; ratified by Senate, 1909.

69. **With Ecuador:** General arbitration; ratified by Senate, 1909.

70. **With Uruguay:** General arbitration; ratified by Senate, 1909.

71. **With Chile:** General arbitration; ratified by Senate, 1909.

72. **With Brazil:** General arbitration; ratified by Senate, 1909.

73. **With Great Britain:** Boundary waters; ratified by Senate March 3, 1909.

74. **With Mexico:** Arbitration of Chamizal case; ratified by Senate Dec. 12, 1910.

In addition, arbitration conventions with the following countries were ratified by the Senate on February 11, 1905, with an amendment, but were never submitted to the countries with which they were made: Austria-Hungary, France, Germany, Great Britain, Italy, Mexico, Norway and Sweden, Portugal, Spain, Swiss Confederation.

In addition, a number of arbitration agreements have been made which were not referred to the Senate.

PARTIAL LIST OF ARBITRATION AGREEMENTS NOT REFERRED TO THE SENATE.

With Brazil: Referring "Canada" claim to an arbitrator. Signed March 14, 1870.

With Colombia: Referring the "Montijo" claims to arbitrators. Signed Aug. 17, 1874.

With Dominican Republic: Referring claim of Improvement Co. to a tribunal. Signed Jan. 31, 1903.

With Guatemala: Private claims. Signed Feb. 23, 1900.

With Haiti: Referring two private claims to an arbitrator. Signed May 28, 1884. (The term of this protocol was extended by an additional protocol signed March 20, 1885.) Submitting a private claim to an arbitrator; signed May 24, 1888. Submitting a claim to arbitration; signed Oct. 18, 1899.

With Mexico: Private claims; signed March 2, 1897. Pius fund, referred to the Hague Tribunal; signed May 22, 1902.

With Nicaragua: Private claims. Signed March 22, 1900.

With Peru: Private claims. Signed May 17, 1898.

With Russia: Submitting claims for detention of American schooners to arbitration. Signed Aug. 22 and Sept. 8, 1900.

With Salvador: Private claims. Signed Dec. 19, 1901.

With Spain: Agreement for the settlement of claims of Americans for injuries committed by Spanish authorities in Cuba. Concluded Feb. 11-12, 1871.

With Venezuela: Private claims. Signed Feb. 17, 1903.

With Portugal: Referring to arbitrators the Lourenço Marques Railroad claim. Signed June 13, 1891.

TREATIES, ANGLO-AMERICAN

This picture, entitled **THE PEACE OF GHENT and THE TRIUMPH OF AMERICA**, was published in Philadelphia in 1814. Minerva represents the wisdom, Mercury the commerce, and Hercules the force of the United States. On the shield of Minerva are the names of those who signed the treaty; on the obelisk those of the American soldiers and sailors who distinguished themselves in the War of 1812. America, attended by Victory, passes in triumph through the arch on her way to the temple of peace.

TREATIES, ANGLO-AMERICAN

Treaties, ANGLO-AMERICAN. In the spring of 1782 Richard Oswald was sent by the British ministry to Paris, to confer with Dr. Franklin on the subject of peace. His mission was initiatory in character. In July following Oswald was vested with full power to negotiate a treaty of peace, and in September the United States appointed four commissioners, representing the various sections of the Union, for the same purpose. These were John Adams, of Massachusetts; John Jay, of New York; Dr. Franklin, of Pennsylvania; and Henry Laurens, of South Carolina. These were all in Europe at the time. Dr. Franklin and Mr. Oswald had already prepared the way for harmonious negotiations. Franklin had assured Oswald that independence, satisfactory boundaries, and a participation in the fisheries would be indisputable

requisites in a treaty. In July Parliament had passed a bill to enable the King to acknowledge the independence of the United States, and all obstacles in the way of negotiations were removed. Laurens joined the other American commissioners at Paris, and on Nov. 30, 1782, a preliminary treaty of peace was signed by the commissioners and Mr. Oswald, without the knowledge of the French government. This was a violation of the treaty of alliance.

In April, 1783, the preliminary treaty of peace having been ratified by the United States and Great Britain, the latter vested David Hartley with full powers to negotiate a definite treaty with the American commissioners. It was concluded and signed at Paris, Sept. 3, 1783, by Hartley, on the part of Great Britain, and Dr.

TREATIES, ANGLO-AMERICAN

Franklin, John Adams, and John Jay, on the part of the United States. The terms were similar to those of the preliminary treaty. When he had signed it, Franklin put on the clothes he had laid aside about ten years before, in accordance with a vow. On the same day definitive treaties between Great Britain, France, and Spain were signed, and one between Great Britain and Holland was signed the day before.

The following is the text of the definitive treaty of peace and friendship between his Britannic Majesty, and the United States of America, signed at Paris, the 3d day of September, 1783:

In the name of the most holy and undivided Trinity.

It having pleased the Divine Providence to dispose the hearts of the most serene and most potent prince, George III., by the grace of God King of Great Britain, France, and Ireland, Defender of the Faith, Duke of Brunswick and Lunenburg, arch-treasurer and prince elector of the Holy Roman Empire, etc., and of the United States of America, to forget all past misunderstandings and differences that have unhappily interrupted the good correspondence and friendship which they mutually wish to restore, and to establish such a beneficial and satisfactory intercourse between the two countries, upon the ground of reciprocal advantages and mutual convenience, as may promote and secure to both perpetual peace and harmony; and having for this desirable end already laid the foundation of peace and reconciliation, by the provisional articles signed at Paris, on the thirtieth day of November, one thousand seven hundred and eighty-two by the commissioners empowered on each part; which articles were agreed to be inserted in, and to constitute the treaty of peace proposed to be concluded between the crown of Great Britain and the said United States, but which treaty was not to be concluded until terms of peace should be agreed upon between Great Britain and France, and his Britannic Majesty should be ready to conclude such treaty accordingly; and the treaty between Great Britain and France having since been concluded, his Britannic Majesty and the

United States of America, in order to carry into full effect the provisional articles above mentioned, according to the tenor thereof, have constituted and appointed: that is to say, his Britannic Majesty on his part, David Hartley, Esq., member of the Parliament of Great Britain; and the said United States on their part, John Adams, Esq., late a commissioner of the United States of America at the Court of Versailles, late delegate in Congress from the State of Massachusetts, and chief-justice of the said State, and minister plenipotentiary of the said United States to their high mightinesses the States-General of the United Netherlands; Benjamin Franklin, Esq., late delegate in Congress from the State of Pennsylvania, president of the convention of the said State, and minister plenipotentiary from the United States of America at the Court of Versailles; and John Jay, Esq., late president of Congress, and chief-justice of the State of New York, and minister plenipotentiary from the said United States at the Court of Madrid; to be the plenipotentiaries for the concluding and signing the present definitive treaty, who, after having reciprocally communicated their respective full powers, have agreed upon and confirmed the following articles:

Article 1. His Britannic Majesty acknowledges the said United States—viz., New Hampshire, Massachusetts Bay, Rhode Island and Providence Plantations, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, North Carolina, South Carolina, and Georgia, to be free, sovereign, and independent States; that he treats with them as such, and for himself, his heirs, and successors, relinquishes all claim to the government, proprietary and territorial rights of the same, and every part thereof.

Art. 2. And that all disputes which might arise in future on the subject of the boundaries of the said United States may be prevented, it is hereby agreed and declared that the following are and shall be their boundaries—viz.: From the northwest angle of Nova Scotia—viz., that angle which is formed by a line drawn due north from the source of St. Croix River to the high lands, along the said high

TREATIES, ANGLO-AMERICAN

lands which divide those rivers that empty themselves into the river St. Lawrence, from those which fall into the Atlantic Ocean, to the northwesternmost head of Connecticut River; thence drawn along the middle of that river to the forty-fifth degree of north latitude; from thence by a line due west on said latitude, until it strikes the river Iroquois or Cataraquy; thence along the middle of said river into Lake Ontario; through the middle of said lake, until it strikes the communication by water between that lake and Lake Erie; thence along the middle of the said communication into Lake Erie, through the middle of said lake until it arrives at the water communication between that lake and Lake Huron; thence through the middle of said lake to the water communication between that lake and Lake Superior; thence through Lake Superior northward to the isles Royal and Philipeaux, to the Long Lake; thence through the middle of said Long Lake and the water communication between it and the Lake of the Woods, to the said Lake of the Woods; thence through the said lake to the most northwesternmost point thereof, and from thence a due west course to the river Mississippi; thence by a line to be drawn along the middle of said river Mississippi, until it shall intersect the northernmost part of the thirty-first degree of north latitude; south, by a line to be drawn due east from the determination of the line last mentioned, in the latitude of thirty-one degrees north of the equator, to the middle of the river Apalachicola or Catahouche; thence along the middle thereof, to its junction with the Flint River; thence straight to the head of St. Mary's River, to the Atlantic Ocean; east, by a line to be drawn along the middle of the river St. Croix, from its mouth in the Bay of Fundy to its source, and from its source directly north to the aforesaid high lands, which divide the rivers that fall into the Atlantic Ocean from those which fall into the river St. Lawrence, comprehending all islands within twenty leagues of any part of the shores of the United States, and lying between lines to be drawn due east from the points where the aforesaid boundaries between Nova Scotia on the

one part and east Florida on the other, shall respectively touch the Bay of Fundy and the Atlantic Ocean, excepting such islands as now are or heretofore have been within the limits of the said province of Nova Scotia.

Art. 3. It is agreed that the people of the United States shall continue to enjoy unmolested the right to take fish of every kind on the Great Bank, and on all the other banks of Newfoundland; also in the Gulf of St. Lawrence, and at all other places in the sea where the inhabitants of both countries used at any time heretofore to fish; and also that the inhabitants of the United States shall have liberty to take fish of every kind on such part of the coast of Newfoundland as British fishermen shall use (but not to dry or cure the same on that island), and also on the coasts, bays, and creeks of all other of his Britannic Majesty's dominions in America; and that the American fishermen shall have liberty to dry and cure fish in any of the unsettled bays, harbors, and creeks of Nova Scotia, Magdalen Islands, and Labrador, so long as the same shall remain unsettled; but so soon as the same shall be settled, it shall not be lawful for the said fishermen to dry or cure fish at such settlement, without a previous agreement for that purpose with the inhabitants, proprietors, or possessors of the ground.

Art. 4. It is agreed that the creditors on either side shall meet with no lawful impediment to the recovery of the full value in sterling money of all *bona fide* debts heretofore contracted.

Art. 5. It is agreed that Congress shall earnestly recommend it to the legislatures of the respective States to provide for the restitution of all estates, rights, and properties which have been confiscated, belonging to real British subjects; and also of the estates, rights, and properties of persons resident in districts in the possession of his Majesty's arms, and who have not borne arms against the said United States; and that persons of any other description shall have free liberty to go to any part or parts of any of the thirteen United States, and therein to remain twelve months unmolested in their endeavors to obtain the restitution of such of their estates, rights, and prop-

TREATIES, ANGLO-AMERICAN

erties as may have been confiscated; and that Congress shall also earnestly recommend to the several States a reconsideration and revision of all acts or laws regarding the premises, so as to render the said laws or acts perfectly consistent, not only with justice and equity, but with that spirit of conciliation which, on the return of the blessings of peace, should invariably prevail; and that Congress shall also earnestly recommend to the several States that the estates, rights, and properties of such last-mentioned persons shall be restored to them, they refunding to any persons who may be now in possession the *bona fide* price (where any has been given), which such persons may have paid on purchasing any of the said islands, rights, or properties since the confiscation.

And it is agreed that all persons who have any interest in confiscated lands, either by debts, marriage settlements, or otherwise, shall meet with no lawful impediment in the prosecution of their just rights.

Art. 6. That there shall be no future confiscations made, nor any prosecutions commenced against any person or persons, for or by reason of the part which he or they may have taken in the present war; and that no person shall on that account suffer any future loss or damage either in his person, liberty, or property; and that those who may be in confinement on such charges, at the time of the ratification of the treaty in America, shall be immediately set at liberty, and the prosecutions so commenced be discontinued.

Art. 7. There shall be a firm and perpetual peace between his Britannic Majesty and the said United States, and between the subjects of the one and the citizens of the other; wherefore all hostilities, both by sea and land, shall from henceforth cease; all prisoners, on both sides, shall be set at liberty; and his Britannic Majesty shall with all convenient speed, and without causing any destruction, or carrying away any negroes or other property of the American inhabitants, withdraw all his armies, garrisons, and fleets from the said United States, and from every post, place, and harbor within the same, leaving in all fortifications the American artillery that

may be therein; and shall also order and cause all archives, records, deeds, and papers belonging to any of the said States, or their citizens, which in the course of the war may have fallen into the hands of his officers, to be forthwith restored, and delivered to the proper States and persons to whom they belong.

Art. 8. The navigation of the river Mississippi, from its source to the ocean, shall forever remain free and open to the subjects of Great Britain and the citizens of the United States.

Art. 9. In case it should so happen that any place or territory belonging to Great Britain or to the United States should have been conquered by the arms of either from the other, before the arrival of the said provisional articles in America, it is agreed that the same shall be restored without difficulty and without requiring any compensation.

Art. 10. The solemn ratifications of the present treaty, expedited in good and due form, shall be exchanged between the contracting parties in the space of six months, or sooner, if possible, to be computed from the day of the signature of the present treaty.

In witness whereof, we, the undersigned, their ministers plenipotentiary, have in their name, and in virtue of our full powers, signed with our hands the present definitive treaty, and caused the seals of our arms to be affixed thereto.

Done at Paris, this third day of September, in the year of our Lord one thousand seven hundred and eighty-three.

DAVID HARTLEY,
JOHN ADAMS,
B. FRANKLIN,
JOHN JAY.

For some years the British government omitted to execute the provisions of the treaty of peace with the United States concerning the delivering up of the forts on the northeastern frontier. Gouverneur Morris was directed by Washington to go to England from Paris (1791) to sound the British ministry on the subject of a full and immediate execution of the treaty. He remained there about nine months, endeavoring to obtain a positive answer to the questions, Will you execute the treaty? Will you make a treaty of

TREATIES, ANGLO-AMERICAN

commerce with the United States? The British came to the conclusion that the new national government contained vastly more vitality than the league of States, and could enforce its wishes with energy; so in August, 1791, George Hammond was sent as full minister to the United States. But the treaty of 1783 was not fully executed until after that of Jay was negotiated and ratified. See JAY, JOHN.

In 1814 the British government rejected the mediation of the Empress of Russia in bringing about a peace with the United States, but finally offered to treat directly with the United States. The ancient city of Ghent, in Belgium, was selected, and there the commissioners of the two governments met in the summer of 1814. The American commissioners were John Quincy Adams, James A. Bayard, Henry Clay, Jonathan Russell, and Albert Gallatin. The British commissioners were Lord Gambier, Henry Goulburn, and William Adams. These joined the American commissioners at Ghent, Aug. 6, 1814. Christopher Hughes, Jr., the American *chargé d'affaires* at Stockholm, was appointed secretary to the American commissioners. Negotiations were speedily opened, when a wide difference of views appeared, which at first threatened the most formidable obstructions to an agreement. The discussions continued several months, and a conclusion was reached by a mutual agreement to a treaty on Dec. 24, 1814, when it was signed by the respective commissioners. It provided for the mutual restoration of all conquered territory, and for three commissions—one to settle the titles to islands in Passamaquoddy Bay, another to mark out the northeastern boundary of the United States as far as the St. Lawrence, and a third to run the line through the St. Lawrence and the Lakes to the Lake of the Woods. In case of disagreement in either commission, the point in dispute was to be referred to some friendly power. No provision was made as to the boundary west of the Lake of the Woods, nor as to the fisheries on the shores of British America. It took away from the British a normal right (never used), that of navigating the Mississippi; and from the

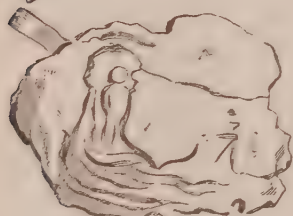

New England fishermen a valuable right, hitherto used from the earliest time, that of catching and curing fish on the shores of the Gulf of St. Lawrence. It was agreed that both parties should use their best endeavors to suppress the African slave-trade. Hostilities on land were to terminate with the ratification of the treaty of peace, and on the ocean at specified periods, according to distance, the longest being four months. It did not secure to the Americans what they went to war for—namely, immunity from search and impressment.

The treaty was ratified Dec. 28, 1814, by the Prince Regent, and then sent to the United States in the British sloop-of-war *Favorite*. She arrived in New York on Feb. 11, 1815. Mr. Hughes, principal secretary to the American commissioners, left Ghent with a copy of the treaty at the same time, sailed for the Chesapeake from the *Texel* in the schooner *Transit*, landed at Annapolis two days after the *Favorite* reached New York, and put his copy of the treaty into the hands of President Madison before the ratified copy arrived there. The treaty of peace spread joy over the land, because it assured peace; but when its contents were known, and that immunity from search or impressment had not been secured, it was severely criticised. The opposition pointed to it exultingly as proof of the wisdom of their prophecies, the patriotism of their course in opposing the war, and the truth of their declaration that the "war was a failure." The English people, too, indulged in strong condemnation of the treaty, because it made concessions to the Americans.

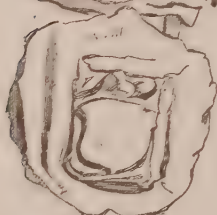

The effect of the treaty upon financial matters was very marked. Six-per-cents rose, in twenty-four hours, from 76 to 86, and treasury notes from 92 to 98. Coin, which was 22 per cent. premium, fell to 2 per cent. in forty-eight hours. The effect on commerce was equally great. Within forty-eight hours sugar fell from \$26 per cwt. to \$12.50; tea, from \$2.25 per pound to \$1; tin, from \$80 a box to \$25. In England medals were struck in commemoration of the event. SEALS AND SIGNATURES TO THE ANGLO-AMERICAN TREATY AT GHENT.

Treaties, FRANCO-AMERICAN. In September, 1776, the Continental Congress, after weeks of deliberation, adopted an elaborate plan of a treaty to be proposed to France. They wanted France to engage in a separate war with Great Britain, and so give the Americans an opportunity for establishing their independence. They renounced in favor of France all eventual conquests in the West Indies, but claimed the sole right of acquiring British Continental America, and all adjacent islands, including the Bermudas, Cape Breton and Newfoundland. They proposed arrangements concerning the fisheries; avowed the principle of Frederick the Great that free ships made free goods, and that a neutral power may lawfully trade with a belligerent. Privateering was to be restricted, not abolished; and while the Americans were not willing to make common cause with the French, they were willing to agree not to assist Great Britain in the war on France, nor trade

with that power in goods contraband of war. The commissioners sent to negotiate the treaty were authorized to promise that, in case France should become involved in the war, neither party should make a definitive treaty of peace without six months' notice to the other.

Franklin, Deane, and Lee were United States commissioners at the French Court at the close of 1776. The Continental Congress had elaborated a plan of a treaty with France, by which it was hoped the States might secure their independence. The commissioners were instructed to press for an immediate declaration of the French government in favor of the Americans. Knowing the desire of the French to widen the breach and cause a dismemberment of the British Empire, the commissioners were to intimate that a reunion of the colonies with Great Britain might be the consequence of delay. But France was then unwilling to incur the risk of war with Great Britain. When the defeat of

TREATIES

Burgoyne was made known at Versailles, assured thereby that the Americans could help themselves, the French Court were ready to treat for an alliance with them. The presence of an agent of the British ministry in Paris, on social terms with the American commissioners, hastened the negotiations, and, on Feb. 6, 1778, two treaties were secretly signed at Paris by the American commissioners and the Count de Vergennes on the part of France. One was a commercial agreement, the other an alliance contingent on the breaking out of hostilities between France and Great Britain. It was stipulated in the treaty of alliance that peace should not be made until the mercantile and political independence of the United States should be secured. The conciliatory bills of Lord North made the French monarch anxious, for a reconciliation between Great Britain and her colonies would thwart his scheme for prolonging the war and dismembering the British Empire; and he caused the secret treaties to be officially communicated to the British government, in language so intentionally offensive that the announcement was regarded as tantamount to a declaration of war, and the British ambassador at the French Court was withdrawn.

Because the treaties with France had been repeatedly violated; the just claims of the United States for the reparation of injuries to persons and property had been refused; attempts on the part of the United States to negotiate an amicable adjustment of all difficulties between the two nations had been repelled with indignity; and because, under the authority of the French government, there was yet pursued against the United States a system of predatory violence infracting those treaties, and hostile to the rights of a free and independent nation—Congress, on July 7, 1797, passed an act declaring the treaties heretofore concluded with France no longer obligatory on the United States.

Treaties, INDIAN. Easton, on the Delaware, was a favorite place for holding councils with the Indian chiefs between 1754 and 1761. On these occasions 200 to 500 Indians were frequently seen. Teedyuscung, an eminent Delaware chief, who represented several tribes, was chief speaker and manager. In 1756 the rela-

tions between the English and the Six Nations, the Delawares, Shawnees, and Mohegans were critical, for the Indians especially the Delawares, had become greatly incensed against the white people of Pennsylvania. The Quakers of that State had espoused the cause of the Indians and formed an association for securing justice for them, and friendship between them and the white people. They held two conferences at Easton with the Indians, and Sir William Johnson complained that the Quakers had intruded upon his office. Finally, in July, 1756, a conference was held between the Delawares, Shawnees, Mohegans, the Six Nations, and Governor Denny and his council, and George Croghan, an Indian trader. At the suggestion of the Quakers, TEEDYUSCUNG (*q. v.*) invited Charles Thomson, master of the Quaker Academy in Philadelphia, and afterwards permanent secretary of the Continental Congress, to act as his secretary. Denny and Croghan opposed it; Teedyuscung persisted in having Thomson make minutes of the proceedings, so that garbled and false reports of interested men might not be given as truth. By this arrangement the Indians received fair play.

The conference was thinly attended; but at another, begun on Nov. 8 the same year, the Indian tribes were well represented. In reply to questions by Governor Denny of what he complained, Teedyuscung charged the proprietaries of Pennsylvania with obtaining large territories by fraud, and specified well-known instances like that of the "Indian Walk." At that conference there were many citizens from Philadelphia, chiefly Quakers, and the result was, after deliberations kept up for nine days, a satisfactory treaty of peace was made between the Indians and the English, the governor offering to indemnify the Delawares for any lands which had been fraudulently taken from them. That matter was deferred until a council was held at Easton in July, 1757, when Teedyuscung was well plied with liquor. The Quakers, with much exertion, enabled the old chief to resist the intrigues of Croghan to weaken his influence among the Indians.

Another council was held there in the autumn of 1758. The object was to ad-

TREATY—TREATY OF LANCASTER

just all differences between the English and the Six Nations, as well as other tribes farther westward and southward. The governors of Pennsylvania and New Jersey, Sir William Johnson, Colonel Croghan, and a large number of the Friendly Association were present. Teedyuscung acted as chief speaker, which offended the Six Nations, who regarded the Delawares as their vassals; but he conducted himself admirably, maintained his position finely, and resisted the wiles of Colonel Croghan and the governor. This great council continued eighteen days. The land question was thoroughly discussed. All causes for misunderstanding between the English and the Indians were removed, and a treaty for a general peace was concluded Oct. 26, 1758. There was another council held at Easton in 1761, concerning settlements at Wyoming, in which Teedyuscung took an active and eloquent part. See SUSQUEHANNA SETTLERS.

A treaty signed in New York, Aug. 7, 1790, by Gen. Henry Knox for the United States, and Alexander McGillivray and twenty-three other Creek chiefs, provided for the relinquishment of Georgia to claims of an immense tract of land belonging to the Creeks south and west of the Oconee River; the acknowledgment of the Creeks being under the protection of the United States; the resignation of the Creeks of all pretensions to lands north and east of the Oconee River; a mutual exchange of prisoners, and an agreement for the delivery of an Indian murderer of a white man. A secret article provided that presents to the value of \$1,500 should be distributed annually among the nation; annuities of \$100 secured to six of the principal chiefs, and \$1,200 a year to McGillivray annually, in the name of a salary; also the privilege of importing goods for supplying the Indians. These money considerations were intended to secure their fidelity to the terms of the treaty. See ARBITRATION, GENERAL TREATY OF.

Treaty, THE HAY-PAUNCEFOTE. See CLAYTON-BULWER TREATY.

Treaty of Aix-la-Chapelle, a treaty between Great Britain, France, Holland, Germany, Spain, and Greece; signed by the representatives of these respective

powers on Oct. 18 (N. S.), 1748. By it the treaties of Westphalia (1648), of Nimeguen (1678-79), of Ryswick (1697), of Utrecht (1713), of Baden (1714), of the Triple Alliance (1717), of the Quadruple Alliance (1718), and of Vienna (1738), were renewed and confirmed. It was fondly hoped this treaty would insure a permanent peace for Europe. It was, however, only a truce between France and England, contending for dominion in America. The English regarded as encroachments the erection by the French of about twenty forts, besides block-houses and trading-posts, within claimed English domain. So while ACADIA (*q. v.*) furnished one field for hostilities between the two nations, the country along the lakes and in the Ohio and Mississippi valleys furnished another.

Treaty of Ghent. See TREATIES, ANGLO-AMERICAN.

Treaty of Guadalupe-Hidalgo. A treaty of peace, friendship, limits, and settlements was concluded at Guadalupe-Hidalgo, a city of Mexico, Feb. 2, 1848, between Nicholas P. Trist on the part of the United States, and Don Luis Gonzaga Cuevas, Don Bernardo Couto, and Don Miguel Atristain on the part of Mexico. It provided for a convention for the provisional suspension of hostilities; for the cessation of the blockade of Mexican ports; for the evacuation of the Mexican capital by the United States troops within a month after the ratification of the treaty, and the evacuation of Mexican territory within three months after such evacuation; for the restoration of prisoners of war; for a commission to survey and define the boundary-lines between the United States and Mexico; for the free navigation of the Gulf of California and the Colorado and Green rivers for United States vessels; freedom of Mexicans in any territory acquired by the United States; Indian incursions; payment of money to Mexico for territory conquered and held, and of debts due citizens of the United States by Mexico; regulation of international commerce, and other minor regulations about property, etc. Both governments ratified the treaty. See MEXICO, WAR WITH.

Treaty of Lancaster. See LANCASTER, TREATY OF.

TREATY OF PARIS—TRENCHARD

Treaty of Paris, a definitive treaty of peace, signed at Paris on Feb. 18, 1763 (and was soon after ratified) between Great Britain, France, Spain, and Portugal, which materially changed the political boundaries and aspects of North America. The acquisitions of Great Britain, both from France and Spain, on the continent of North America, ending the war then recently closed, were most important in their bearings upon the history of the so-called New World. France renounced and guaranteed to Great Britain all Nova Scotia or Acadia, Canada, the Isle of Cape Breton, and all other islands in the Gulf and River of St. Lawrence. The treaty gave to the French the liberty of fishing and drying on a part of Newfoundland and in the Gulf of St. Lawrence, at a distance of 3 leagues from the shores belonging to Great Britain; ceded the islands of St. Peter and Miquelon, as a shelter for French fishermen; declared that the confines between the dominions of Great Britain and France, on this continent, should be fixed by a line drawn along the middle of the Mississippi River, from its source as far as the River Iberville (14 miles below Baton Rouge), and from thence by a line drawn along the middle of this river and of the lakes Maurepas and Pontchartrain, to the sea; guaranteed to Great Britain the river and port of Mobile, and everything on the left side of the Mississippi, excepting the town of New Orleans and the island on which it is situated, which should remain to France; the navigation of the Mississippi to be equally free to the subjects of both nations, in its whole breadth and length, from its source to the sea, as well as the passage in and out of its mouth; that the French in Canada might freely profess the Roman Catholic faith, as far as the laws of Great Britain would permit, enjoy their civil rights, and retire when they pleased, disposing of their estates to British subjects; that Great Britain should restore to France the islands of Guadeloupe, Marie Galante, Desadea, and Martinique, in the West Indies, and of Belle-Isle, on the coast of France, with their fortresses, giving the British subjects at these places eighteen months to sell their estates and depart, without being restrained on any account,

excepting by debts or criminal prosecutions. France ceded to Great Britain the islands of Grenada and the Grenadines, with the same stipulation as to their inhabitants as those in the case of the Canadians; the islands of St. Vincent, Dominica, and Tobago to remain in the possession of England, and that of St. Lucia, of France; that the British should cause all the fortifications erected in the Bay of Honduras, and other territory of Spain in that region, to be demolished; that Spain should desist from all pretensions to the right of fishing about Newfoundland; that Great Britain should restore to Spain all her conquests in Cuba, with the fortress of Havana; that Spain should cede and guarantee, in full right, to Great Britain, Florida, with Fort St. Augustine and the Bay of Pensacola, and all that Spain possessed on the continent of America to the east, or to the southeast, of the Mississippi River. This gave England practically all North America north of Mexico and east of the Mississippi.

Treaty of Paris (Span.-Amer. War). See SPAIN, TREATY WITH.

Treaty of Portsmouth. See JAPAN AND THE UNITED STATES; PORTSMOUTH (N. H.).

Treaty of Utrecht, a treaty signed April 11, 1713, which secured the Protestant succession to the throne of England, the separation of the French and Spanish crowns, the destruction of Dunkirk, the enlargement of the British colonies in America, and a full satisfaction from France of the claims of the allies, England, Holland, and Germany. This treaty terminated Queen Anne's War, and secured peace for thirty years.

Treaty of Washington, THE. See WASHINGTON, THE TREATY OF.

Treaty of Westminster. See WESTMINSTER, TREATY OF.

Treaty with Texas. See TEXAS.

Trenchard, STEPHEN DECATUR, naval officer; born in Brooklyn, N. Y., July 10, 1818; entered the navy in 1834; promoted lieutenant in 1847; rescued the British bark *Adieu* off Gloucester, Mass., while on coast-survey duty in 1853-57; served with distinction during the Civil War; commanded the *Rhode Island* when that vessel endeavored to tow the *Monitor* from Hampton Roads to Beaufort, N. C. The

TRENT—TRENTON

latter vessel foundered off Cape Hatteras, but Lieutenant Trenchard succeeded in saving the crew; promoted rear-admiral in 1875; retired in 1880. He died in New York City, Nov. 15, 1883.

Trent, THE. On Nov. 7, 1861, James M. Mason, of Virginia, Confederate envoy to Great Britain, and John Slidell, of Louisiana, accredited to France, embarked at Havana in the British mail steamer *Trent* for England. The United States steamship *San Jacinto*, Captain Wilkes, was watching for the *Trent* in the Bahama channel, 240 miles from Havana, Captain Wilkes having decided, on his own responsibility, to seize the two Confederate envoys. The *San Jacinto* met the *Trent* on the forenoon of Nov. 8, signalled her to stop in vain, and then fired a shot across her bow. Her captain unwillingly allowed Mason and Slidell, with their secretaries, to be taken aboard the *San Jacinto*. Captain Wilkes reached Boston on Nov. 19, and the two ministers were confined in Fort Warren. This seizure was received with favor in the United States, but Great Britain demanded from the government at Washington a formal apology and the immediate release of the prisoners, Lord John Russell instructing the minister, Lord Lyons, at Washington, Nov. 30, 1861, that unless a satisfactory answer were given within seven days he might, at his discretion, withdraw the legation and return to England. This despatch was received on Dec. 18; on the 19th Lord Lyons called on Mr. Seward, and in a personal interview an amicable adjustment was made possible by the moderation of both diplomats. On Dec. 26 Mr. Seward transmitted to Lord Lyons the reply of the United States, in which the illegality of the seizure was recognized, while the satisfaction of the United States government was expressed in the fact that a principle for which it had long contended was thus accepted by the British government. Mason and Slidell were at once released, and sailed for England Jan. 1, 1862. See **MASON, JAMES MURRAY; SLIDELL, JOHN; WILKES, CHARLES.**

Trent, WILLIAM PETERFIELD, educator; born in Richmond, Va., Nov. 10, 1862; graduated at the University of Virginia in 1884; Professor of English at the Uni-

versity of the South in 1888-1900; accepted the chair of English literature at Columbia University in the latter year. He is the author of *English Culture in Virginia; Southern Statesmen of the Old Régime; Robert E. Lee; The Progress of the United States in the Century*, etc.

Trenton, a city and capital of the State of New Jersey; originally settled under the name of Ye Ffalls of ye De la Ware. A number of members of the Society of Friends, including Mahlon Stacy, purchased land here in 1680, and large plantations were bought by Judge Trent in 1715, which caused the settlement to be called Trent Town. The place was created a borough town by royal charter in the middle of the eighteenth century, and the town became the State capital in 1790. After the Revolutionary War the Continental Congress once met here. The city is best known historically because of the decisive battle fought here (see **TRENTON, BATTLE OF**). The event has been commemorated by a memorial shaft erected at the old Five Points, and surmounted by a statue of Washington directing his troops. Pop. (1910), 96,815.

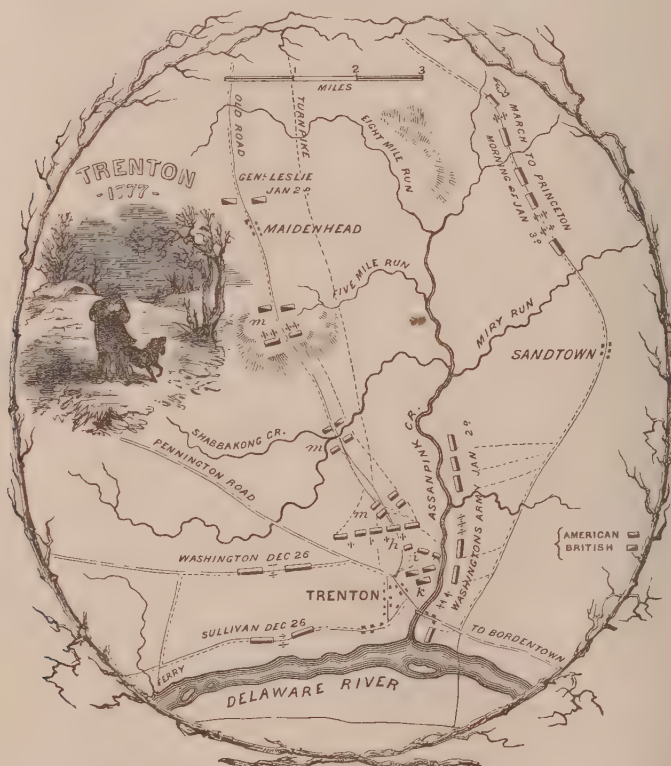

Trenton, BATTLE OF. Late in December, 1776, Washington's army, by much exertion, had increased to nearly 6,000 men. Lee's division, under Sullivan, and some regiments from Ticonderoga under Gates, joined him on the 21st. Contrary to Washington's expectations, the British, content with having overrun the Jerseys, made no attempt to pass the Delaware, but established themselves in a line of cantonments at Trenton, Pennington, Bordentown, and Burlington. Other corps were quartered in the rear, at Princeton, New Brunswick, and Elizabethtown; and so sure was Howe that the back of the "rebellion" was broken that he gave Cornwallis leave to return to England, and he was preparing to sail when an unexpected event detained him. Washington knew that about 1,500 of the enemy, chiefly Hessians (Germans), were stationed at Trenton under Colonel Rall, who, in his consciousness of security and contempt for the Americans, had said, "What need of intrenchments? Let the rebels come; we will at them with the bayonet." He had made the fatal mistake of not planting a single cannon. Washington felt

TRENTON, BATTLE OF

strong enough to attack this force, and at twilight on Christmas night he had about 2,000 men on the shore of the Delaware at McConkey's Ferry (afterwards Taylorsville), a few miles above Trenton, preparing to cross the river. He rightly believed that the Germans, after the usual carouse of the Christmas festival, would be peculiarly exposed to a surprise, and he prepared to fall upon them before daylight on the morning of the 26th.

With him were Generals Stirling, Greene, Sullivan, Mercer, Stephen, and

eral Lee, with wilful disobedience refused the duty, and turning his back on Washington, rode on towards Baltimore to intrigue among Congressmen against Gen. PHILIP SCHUYLER (*q. v.*). Lee was foraging in the Delaware, and its surface was covered with floating pieces. The current was swift, the night was dark, and towards midnight a storm of snow and sleet set in. It was 4 A.M. before the troops in marching order stood on the New Jersey shore, boats having been hurriedly provided for their passage. The army moved in two

MAP OF THE BATTLE OF TRENTON.

Knox, commanding the artillery. Arrangements were made for a similar movement against the cantonments below Trenton, the command of which was assigned to General Gates; but that officer, jealous of Washington, and in imitation of Gen-

columns—one, led by Sullivan, along a road nearest the river; the other, led by Washington and accompanied by the other generals, along a road a little distance to the left. It was broad daylight when they reached Trenton, but they were undis-

THE BATTLE OF TRENTON

TRESCOT—TRESPASS ACT

covered until they reached the picket-line on the outskirts of the village. The firing that ensued awakened Rall and his fellow-officers (who had scarcely recovered from the night's debauch) from their deep slumbers. The colonel was soon at the head of his men in battle order. A sharp conflict ensued in the village, lasting only thirty-five minutes. The Germans were defeated and dispersed, and Colonel Rall was mortally wounded, and taken to his quarters, where he died. The main body, attempting to escape by the Princeton road, were intercepted by Colonel Hand and made prisoners. Some British light-horse and infantry at Trenton escaped to Bordentown. The victory was complete. The spoils were about 1,000 prisoners, 1,200 small-arms, six brass field-pieces, and all the German standards. The triumphant army recrossed the Delaware with their prisoners (who were sent to Philadelphia), and went back to their

GREAT BRIDGE AT McONKEY'S FERRY.

RALL'S HEADQUARTERS.

encampment. This bold stroke puzzled and annoyed the British. Cornwallis did not sail for England, but was sent back into New Jersey. The Tories were alarmed, and the dread of the mercenary Germans was dissipated. The faltering militia soon began to flock to the standard of Washington, and many of the soldiers who were about to leave the American army re-enlisted.

Trescot, WILLIAM HENRY, diplomatist; born in Charleston, S. C., Nov. 10, 1822;

graduated at Charleston College in 1840; admitted to the bar in 1843; assistant Secretary of State from December, 1860, till the secession of South Carolina; held a seat in the legislature of that State in 1862-66; began the practice of law in Washington in 1875; was a member of the commission of 1880 to revise the treaty with China; special agent to the belligerents of Peru, Chile, and Bolivia in 1881, and during the same year represented the government in the negotiations concerning its rights in the Isthmus of Panama; appointed with General Grant in 1882 to effect a commercial treaty with Mexico. His publications include *A Few Thoughts on the Foreign Policy of the United States*; *The Diplomacy of the Revolution*; *Diplomatic System of the United States*; *An American View of the Eastern Question*; *The Diplomatic History of the Administrations of Washington and Adams*; *Address before the South Carolina Historical Society*, etc. He died in Pendleton, S. C., May 4, 1898.

Trespas Act. Some of the States whose territory had been longest and most recently occupied by the British were inclined to enact new confiscation laws. Such was the so-called trespass act of New York, which authorized the owners of real estate in the city to recover rents and damages against such persons as had used their buildings under British authority during the war. This act was passed before the news arrived of the terms of the preliminary treaty of peace (see *TREATIES, ANGLO-AMERICAN*). In 1786 the Supreme Court of New York, by the efforts of Hamilton, declared the

TRIALS

trespass act void, as being in conflict with*the definitive treaty of Paris. See TREATIES, FRANCO-AMERICAN.

Trials. The following is a list of the most notable trials in the United States:

Anne Hutchinson; sedition and heresy (the Antinomian controversy); imprisoned and banished.....1637

[Governor Altgeld pardoned all the anarchists (Schwab, Neebe, and Fielden) in prison, June 26, 1893.]

City of New Orleans against administratrix of the estate of Myra Clark Gaines, deceased, Jan. 9, 1885, in Supreme Court of United States; judgment against the city for over \$500,000

May 13, 1889

[About 1836 Myra Clark Gaines filed a bill in equity to recover real estate in the possession of the city of New Orleans. Her father, Daniel Clark, who died in New Orleans a reputed bachelor, Aug. 16, 1813, by will dated May 20, 1811, gave the property to his mother, and by memorandum for a will (which was never found) made in 1813, gave it to his daughter Myra. The latter will was received by the Supreme Court of Louisiana Feb. 18, 1856, and the legitimacy of Myra questioned. Judge Billings, of the United States circuit court at New Orleans, rendered a decision which recognized the probate of the will of 1813, in April, 1877; an appeal was taken, and in 1883 judgment was again given in favor of Mrs. Gaines for \$1,925,667 and interest. The final appeal, June, 1883, resulted as above. In 1861 the value of the property was estimated at \$35,000,000.]

Dr. Patrick Henry Cronin, Irish dynamite nationalist (expelled from the Clan-na-Gael, and denounced as a spy by Alexander Sullivan and the leaders, termed the

"triangle," and condemned to death by them for accusing them of embezzling funds allotted for dynamiting in England in February, May 4), found murdered at Lake View, Chicago.....May 22, 1889

Coroner's jury declare the murder to be the result of a conspiracy, of which Alexander Sullivan, P. O'Sullivan, Daniel Coughlin, and Frank Woodruff (connected with the Clan-na-Gael) were the principals. Alexander Sullivan and others arrested, June 12; Sullivan released on high bail.....June 15, 1889

Martin Burke arrested at Winnipeg, Canada, indicted about June 20. The grand jury at Chicago, after sixteen days' investigation, indict Martin Burke, John F. Beggs, Daniel Coughlin, Patrick O'Sullivan, Frank Woodruff, Patrick Cooney, and John Kunz, with others unknown, of conspiracy and of the murder of Patrick Henry Cronin.....June 29, 1889

Coughlin, Burke, O'Sullivan, Kunz, and Beggs, for murder of Cronin in Chicago, May 6; trial begins Aug. 30; the first three are sentenced to imprisonment for life, Kunz for three years, and Beggs discharged.....Dec. 16, 1889

[He was sentenced to six months' imprisonment for contempt of court in violating its injunction in 1895.]

Leon Czolgosz indicted in Buffalo for murder of President McKinley, Sept. 16, 1901; tried Sept. 23-24; found guilty on second day; executed in Auburn (N. Y.) prisonOct. 29, 1901

William R. Laidlaw, the "human shield," used by Russell Sage to protect himself when an insane man exploded a bomb in the latter's office in New York City, Dec. 4, 1891, sued Sage for \$50,000 damages because of the severe injuries he received. The case was tried four times. Twice Laidlaw obtained a verdict of \$25,000 and at the fourth trial one for \$40,000, but each time the Court of Appeals reversed the verdict. After fighting the case for ten years, Laidlaw had to abandon it for lack of funds, and died pennilessAug. 8, 1911

Former Governor Frank Steunenberg, of Idaho, was assassinated by a bomb at his residence at Caldwell, Dec. 30, 1905. Five men, alleged to be active members of the Western Federation of Miners, were arrested for the crime, and one of them, "Harry" Orchard, confessed that he had been hired by William D. Haywood, George W. Pettibone, and Charles H. Moyer, all of the "Inner Circle" of the Western Federation of Miners, to kill the former governor. Haywood and Pettibone were acquitted on trial, and the case against

Moyer was dismissed in 1907, and Orchard was sentenced to death (commuted to life imprisonment) in 1908.

Buck Stove and Range Company against officials of the American Federation of Labor; suit begun in August, 1907; Supreme Court of the District of Columbia issued a permanent injunction forbidding the publication of the company's name in the "unfair" list in the federation's organ; President Samuel Gompers, Vice-President John Mitchell, and Secretary Frank Morrison of the federation sentenced to imprisonment for contempt of court for violating the injunction, Dec. 23, 1908; released on bail on appeal; case still open. See GOMPERS, SAMUEL.

Pennsylvania State Capitol frauds, involving nearly every important person connected with the erection and furnishing of the new capitol at Harrisburg; sensational trial, conviction, and varied punishment of principal accused. (See PENNSYLVANIA)1908

Pittsburgh official corruption cases, in which members of the Common Council and numerous bank officials were charged with giving and accepting bribes for the deposition of public money in certain banks; about 100 persons were indicted for conspiracy, perjury, and bribery, and all were sentenced to various degrees of punishment1910

San Francisco "ring," charged with graft and corruption; former Mayor Schmitz convicted of extortion in office, and imprisoned, 1906; Abraham Ruef, former political boss, convicted of graft and sentenced to fourteen years' imprisonment, 1908; Ruef made long fight in courts, but his conviction was upheld, and he went to prison.....March, 1911

William Lorimer, United States Senator from Illinois, charged with having been a party to corruption and bribery in his election, was pronounced blameless by a subcommittee of the Senate Committee on Privileges and Elections, Dec. 17, 1910. A committee of the State senate, investigating the same charges, declared that his election "would not have occurred had it not been for bribery and corruption." On a second investigation by the United States Senate his election was declared invalid because of corrupt methods

July 13, 1912

Triangle, the extreme northwestern portion of the State of Pennsylvania bordering upon Lake Erie. This formerly formed a part of the colony of New York, but was purchased by Pennsylvania from the United States government in 1788.

Trianon Decree. Napoleon issued a secret decree, Aug. 5, 1810, ordering the confiscation of all American ships and merchandise which entered France previous to May 1, 1810, and further allowing American ships to enter French ports until Nov. 1, 1810, but they were not to unload without his permission.

Trimble, ALLEN, statesman; born in Augusta county, Va., Nov. 24, 1783; removed to Lexington, Ky., in 1784; and later settled in Highland county, O., where he was clerk of the courts and recorder in 1809-16; was in command of a mounted regiment under Gen. William Henry Harrison in 1812-13; served in both branches of the State legislature in 1816-26; was acting governor of Ohio in 1821-22; governor in 1826-30; and president of the first State board of agriculture in 1846-48. He died in Hillsboro, O., Feb. 2, 1870.

Trimble, ISAAC RIDGEWAY, military officer; born in Culpeper county, Va., May 15, 1802; graduated at the United States Military Academy in 1822, and was assigned the duty of surveying the military road from Washington to the Ohio River; resigned in 1832 and became a civil engineer; was with various railroads as chief engineer till the outbreak of the Civil War, when he took command of the non-uniformed volunteers recruited to defend Baltimore from Northern soldiers; took charge of the location and construction of the batteries at Evansport on the Potomac River. With these batteries he blockaded the river against United States vessels during the winter of 1861-62. He also participated and won distinction in various battles, including Gaines's Mills, Slaughter's Mountain, Second Bull Run, Chancellorsville, etc.; was promoted major-general for gallantry and meritorious services, April 23, 1863. During the third day of the action at Gettysburg he lost a leg, was captured, and held a prisoner at Johnson's Island for twenty-one months before being exchanged. He died in Baltimore, Md., Jan. 2, 1888.

Trimble, ROBERT, jurist; born in Berkeley county, Va., in 1777; removed with his parents to Kentucky in 1780; studied law and began practice in 1803; appointed second judge of the court of appeals in 1810; was chief-justice of Kentucky in 1810; was United States judge for Kentucky in 1816-26, and was then appointed a justice of the United States Supreme Court. He died Aug. 25, 1828.

Trimble, WILLIAM A., legislator; born in Woodford, Ky., April 4, 1786; graduated at Transylvania College; admitted to the bar and began practice in Highland, O., in 1811; was adjutant of his brother Allen's regiment in the campaign against the Pottawattomie Indians in 1812; became major of Ohio volunteers in 1812, and major of the 26th United States Infantry in 1813; brevetted lieutenant-colonel in 1814 for gallantry in the engagement at Fort Erie; was transferred to the 8th Infantry in 1815; and resigned March 1, 1819. He was United States Senator from 1819 till his death in Washington, D. C., Dec. 13, 1821.

Tri-mountain, the name first given to Boston, Mass.

TRINITY CHURCH—TRIPOLI

Trinity Church. The first Episcopal church organized in the province of New York was called in its charter (1697) "The Parish of Trinity Church." The wardens and vestrymen first chosen included several members of the King's council. The following are the names of the first officers of the church: Bishop of London, rector; Thomas Wenham and Robert Lurting, wardens; Caleb Heathcote, William Merret, John Tudor, James Emott, William Morris, Thomas Clarke, Ebenezer Wilson, Samuel Burt, James Evets, Nathaniel Marston, Michael Howden, John Crooke, William Sharpas, Lawrence Read, David Jamison, William Hudleston, Gabriel Ludlow, Thomas Burroughs, John Merret, and William Jane-way, vestrymen. In 1705 a tract of land known as "The Queen's Farm" extended (on the west side of Broadway) from St. Paul's Chapel (Vesey Street and Broadway) along the river to Skinner Road, now Christopher Street. This farm was then totally unproductive. Money was collected for the building of the church. It was a small square edifice then on the banks of the Hudson River. It was enlarged in 1737 to 148 feet in length, including the tower and chancel, and to 72 feet in width. The steeple, which was not completed until 1772, was 175 feet in height. The building was consumed in the great fire of 1776. It was rebuilt in 1788, taken down in 1839, and on May 21, 1846, the present edifice was consecrated. The corporation of Trinity Church still holds a portion of the land of the Queen's Farm, from which a large income is derived. That corporation has contributed generously towards the building and supporting of churches in various parts of the country and carrying on Christian work of various kinds.

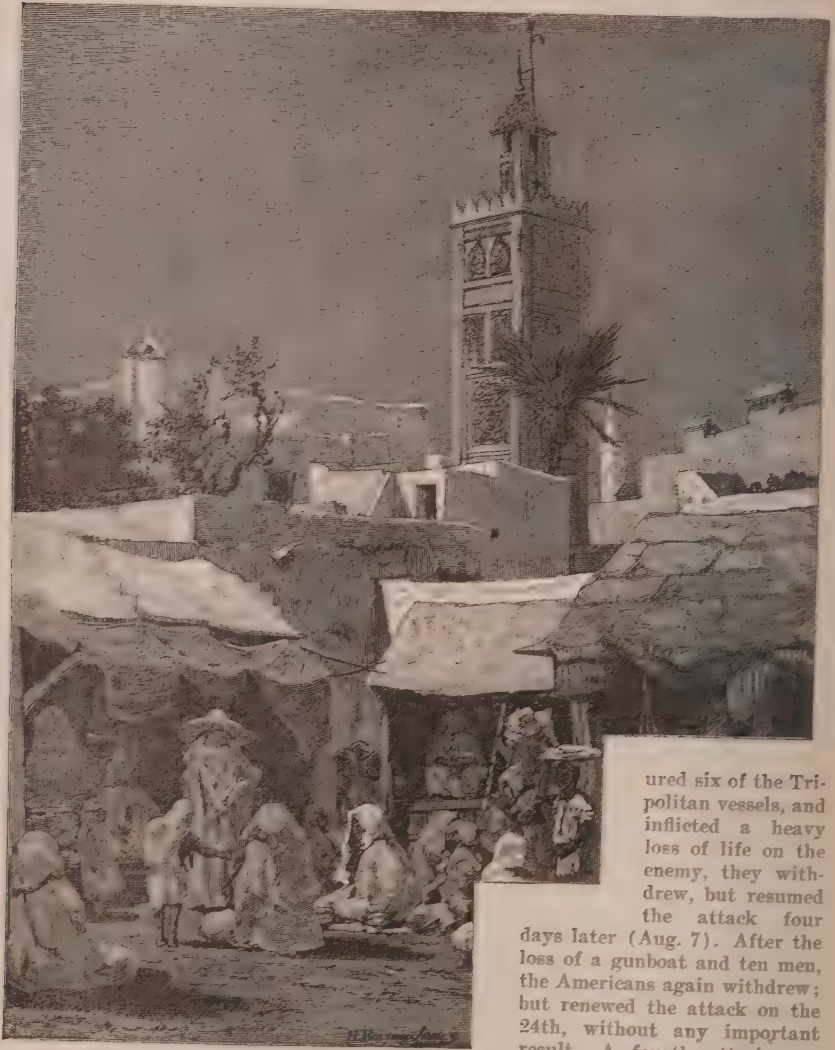

Tripoli, WAR WITH. In the autumn of 1800, the ruler of Tripoli, learning that the United States had paid larger gross sums to his neighbors (see ALGIERS) than to himself, demanded an annual tribute, and threatened war in case it was refused. In May, 1801, he caused the flag-staff of the American consulate to be cut down, and proclaimed war June 10. In anticipation of this event, the American government had sent Commodore Richard Dale with a squadron to the Mediter-

anean. His flag-ship was the *President*. He sailed from Hampton Roads, reached Gibraltar July 1, and soon after the Bey had declared war he appeared before Tripoli, having captured a Tripolitan corsair on the way. The Bey was astonished, and the little American squadron cruising in the Mediterranean made the Barbary States more circumspect. Recognizing the existence of war with Tripoli, the United States government ordered a squadron, under Commodore Richard V. Morris, to relieve Dale. The *Chesapeake* was the commodore's flag-ship. The vessels did not go in a body, but proceeded one after another, between February (1801) and September. Early in May, the *Boston*, after taking the United States minister (R. R. Livingston) to France, blockaded the port of Tripoli. There she was joined by the frigate *Constellation*, while the *Essex* blockaded two Tripolitan corsairs at Gibraltar. The *Constellation*, left alone, had a severe contest not long afterwards with seventeen Tripolitan gunboats and some land batteries, which were severely handled.

Another naval expedition was sent to the Mediterranean in 1803, under the command of Com. Edward Preble, whose flag-ship was the *Constitution*. The other vessels were the *Philadelphia*, *Argus*, *Siren*, *Nautilus*, *Vixen*, and *Enterprise*. The *Philadelphia*, Captain Bainbridge, sailed in July, and captured a Moorish corsair off Tangier, holding an American merchant vessel. Preble arrived in August, and, going to Tangier, demanded an explanation of the Emperor of Morocco, who disclaimed the act and made a suitable apology. Then he proceeded to bring Tripoli to terms. Soon afterwards the *Philadelphia* fell into the hands of the Tripolitans. Little further of much interest occurred until early in 1804, when the boldness of the Americans in destroying the *Philadelphia* in the harbor of Tripoli greatly alarmed the Bey (see PHILADELPHIA, THE). For a while Preble blockaded his port; and in July, 1804, he entered the harbor (whose protection lay in heavy batteries mounting 115 guns) with his squadron. The Tripolitans also had in the harbor nineteen gunboats, a brig, two schooners, and some galleys, with 25,000 soldiers on the land. A sheltering reef

TRIPOLI, WAR WITH

afforded further protection. These formidable obstacles did not dismay Preble. On Aug. 3 he opened a heavy cannonade and bombardment from his gunboats, which (the largest of those of the enemy, and boarded and captured her after a fierce struggle. After the Americans had sunk or capt-

A STREET SCENE IN TRIPOLI.

alone could get near enough for effective service. A severe conflict ensued. Finally, Lieutenant Decatur laid his vessel (the

squadron again withdrew, and lay at anchor off the harbor until Sept. 2, when a fifth attack was made. A floating mine,

ured six of the Tripolitan vessels, and inflicted a heavy loss of life on the enemy, they withdrew, but resumed the attack four

days later (Aug. 7). After the loss of a gunboat and ten men, the Americans again withdrew; but renewed the attack on the 24th, without any important result. A fourth attack was made on the 28th, and, after a sharp conflict, the American

sent to blow up the Tripolitan vessels in the harbor, exploded prematurely, apparently, and destroyed all of the Americans in charge of it (see "INTREPID," THE). The stormy season approaching, Preble withdrew from the dangerous Barbary coast, leaving a small force to blockade the harbor of Tripoli. Com. Samuel Barron was sent to relieve Preble, who, with a large squadron, overawed the Moors and kept up the blockade.

Meanwhile a movement under Capt. William Eaton, American consul at Tunis, soon brought the war to a close. He joined Hamet Caramelli, the rightful Bey of Tunis, in an effort to recover his rights. Hamet had taken refuge with the Viceroy of Egypt. There Eaton joined him with a few troops composed of men of all nations, and, marching westward across Northern Africa 1,000 miles, with transportation consisting of 190 camels, on April 27, 1805, captured the Tripolitan seaport of Derne. They fought their way successfully towards the capital, their followers continually increasing, when, to the mortification of Eaton and the extinguishment of the hopes of Caramelli, they found that Tobias Lear, the American consul-general, had made a treaty of peace (June 4, 1805) with the terrified ruler of Tripoli. So ended the war. The ruler of Tunis was yet insolent, but his pride was suddenly humbled by the appearance of a squadron of thirteen vessels under COMMODORE RODGERS (*q. v.*), who succeeded Barron, and he sent an ambassador to the United States. The Barbary States now all feared the power of the Americans, and commerce in the Mediterranean Sea was relieved of great peril. Pope Pius VII. declared that the Americans had done more for Christendom against the North African pirates than all the powers of Europe united.

Tripp, BARTLETT, diplomatist; born in Harmony, Me., July 15, 1842; graduated at Colby University, 1861, and at the Albany Law School, 1866; removed to Yankton, S. D., and engaged in law practice, 1869; president of the First Constitutional Convention, 1883; chief-justice of the Supreme Court of Dakota Territory, 1885-89; minister to Austria, 1893-97; chairman of the commission of 1899 which arranged a settlement of the questions be-

tween the United States, England, and Germany, concerning the SAMOAN ISLANDS (*q. v.*); and lecturer on constitutional law, University of South Dakota, from 1902.

Trist, NICHOLAS PHILIP, diplomatist; born in Charlottesville, Va., June 2, 1800; educated at West Point, where he was acting professor in 1819-20. In 1845 he was chief clerk of the State Department, and was United States commissioner with the army under General Scott in Mexico authorized to treat for peace, which he accomplished at Guadalupe-Hidalgo in January, 1848. He was afterwards United States consul at Havana. He was a personal friend and the private secretary of President Jackson. He died in Alexandria, Va., Feb. 11, 1874.

Trollope, FRANCES MILTON, author; born in Heckfield, Hampshire, England, about 1780; came to the United States and settled in Cincinnati, O., in 1827, and failed in business. She returned to England in 1831, and published *Domestic Manners of the Americans*. She died in Florence, Italy, Oct. 6, 1863.

No American in the thirties undertook to analyze and describe the standards and aspirations of his countrymen; for the social life of the period we must depend on the testimony of many observers, each of whom saw only a part. Several foreigners undertook a more general task. Mrs. Trollope's book was accepted by many people in England as a typical account of disagreeable people. This Englishwoman lived in a boarding-house in Cincinnati, saw the crude side of a frontier community—the "quick feeders," the empty-headed young women, and the tobacco chewers—and too late discovered a more refined and intellectual society in the East. Of characteristic American life she saw far less than Harriet Martineau, who came over in 1834, and in her two years' stay travelled widely north and south. She found plenty to criticise in American life, yet appreciated the vigor and the advance of the nation. A third foreigner, accepted as one of the most far-seeing observers and critics of American character and statecraft, was ALEXIS DE TOCQUEVILLE (*q. v.*), a Frenchman, who came over in 1831, with the express purpose of studying the institutions of the Ameri-

TROUP—TRUMBULL

cans, and in 1835 and 1840 published his *Democracy in America*. This was the first scientific estimate of popular government in America, going beneath the self-satisfaction of a successful republic to discover the real forces which animated it, and to find out how far it swerved from its own standards. He saw in America a big, bustling community, intensely self-conscious, yet in general sticking to its basal principle of equality of opportunity and encouraging the individual to make the most of himself.

Troup, ROBERT, military officer; born in New York City in 1757; graduated at King's College in 1774; studied law under John Jay; and joined the army on Long Island as lieutenant in the summer of 1776. He became aide to General Woodhull; was taken prisoner at the battle of Long Island; and was for some time in the prison-ship *Jersey* and the provost jail at New York. Exchanged in the spring of 1777, he joined the Northern army, and participated in the capture of Burgoyne. In 1778 he was secretary of the board of war. After the war he was made judge of the United States district court of New York, holding that office several years. Colonel Troup was the warm personal and political friend of Alexander Hamilton. He died in New York City, Jan. 14, 1832.

Trowbridge, JOHN TOWNSEND, author; born in Ogden, N. Y., Sept. 18, 1827; published a large number of juvenile books, many of which deal with subjects in American history.

Trowbridge, WILLIAM PETIT, engineer; born near Birmingham, Mich., May 25, 1828; was graduated at the United States Military Academy in 1848; served on the United States coast survey in 1851-53; conducted tidal and magnetic observations on the Pacific coast in 1853-56; superintended the erection of a self-registering magnetic observatory in Key West in 1860; was employed in the preparation of minute descriptions of the harbors, inlets, and rivers of the south coast and in the supervision of the distribution of supplies to the Union army in 1861-65; chief engineer in the construction of the fortifications at Willett's Point, on Governor's Island, and at other points; for several years professor of engineering at

Yale and Columbia Universities; an expert on bridge construction; designed the first cantilever bridge and invented a high-class coil boiler. He died in New Haven, Conn., Aug. 12, 1892.

Troy, N. Y. In the business of making linen shirts, collars, and cuffs, and in the laundry industry, Troy surpasses every other city in the United States. It is the seat of the Rensselaer Polytechnic Institute and the Emma Willard Seminary. The site of the city was a part of the Van Rensselaer grant of 1629. Van der Heyden was one of the first settlers. He purchased a farm of 65 acres which in 1787 was laid out as a village.

Truman, BENJAMIN CUMMINGS, journalist; born in Providence, R. I., Oct. 25, 1835; received a public-school education; was a compositor and proof-reader on the *New York Times* in 1854-60; served in the Civil War as staff-officer; has been on government missions to China, Japan, Hawaii, Alaska, and several times to Europe. He is the author of *The South During the War*; *Semi-Tropical California*; *From the Crescent City to the Golden Gate*; *The Field of Honor*; *History of the World's Fair in Chicago*; *Campaigning in Tennessee*; *The Missions of California*; *Pictorial Southern California*; *Pictorial Los Angeles*, etc.

Trumbull, BENJAMIN, historian; born in Hebron, Conn., Dec. 19, 1735; graduated at Yale College in 1759, and studied theology under Rev. Eleazer Wheelock; pastor in North Haven for nearly sixty years. His publications include *General History of the United States of America*; *Complete History of Connecticut from 1630 till 1713* (2 volumes). He died in North Haven, Conn., Feb. 2, 1820.

Trumbull, FORT, a Revolutionary fort on the west side of the Thames River below New London, Conn., and opposite Fort Griswold. It is still garrisoned.

Trumbull, GURDON, ornithologist; born in Stonington, Conn., May 5, 1841; published *American Game Birds*; or, *Names and Portraits of Birds, with Descriptions*, and a notable paper on the *American Woodcock*. He died in Hartford, Conn., Dec. 28, 1903.

Trumbull, JAMES HAMMOND, philologist; born in Stonington, Conn., Dec. 20, 1821; educated at Yale College; settled

TRUMBULL

in Hartford in 1847, and held political offices till 1864; librarian of the Watkinson library of reference in Hartford in 1863-91. He was the author of *The Colonial Records of Connecticut* (3 volumes); *Historical Notes on Some Provisions of the Connecticut Statutes*; *The Defence of Stonington against a British Squadron, August, 1814*; *Historical Notes on the Constitution of Connecticut*; *Notes on Forty Algonquin Versions of the Lord's Prayer*; *The Blue Laws of Connecticut and the False Blue Laws invented by the Rev. Samuel Peters*; *Indian Names of Places in and on the Borders of the Connecticut, with Interpretations*, etc. He died in Hartford, Conn., Aug. 5, 1897.

Trumbull, JOHN, poet; born in Westbury (since Watertown), Conn., April 24, 1750; graduated at Yale College in 1767, having been admitted to the college at the age of seven years, such was his precocity in acquiring learning; but he did not reside there until 1763, on account of delicate health. In 1773 he was admitted to the bar, having been two years a tutor in Yale College. During that time he wrote his first considerable poem, *The Progress of Dulness*. He was a warm and active patriot. In 1775 the first canto of his famous poem, *McFingal*, was published in Philadelphia. The whole work, in four cantos, was published in Hartford in 1782. It is a burlesque epic, in the style of *Hudibras*, directed against the Tories and other enemies of liberty in America. This famous poem has passed through many editions. After the war, Trumbull, with Humphreys, Barlow, and Lemuel Hopkins, wrote a series of poetic essays entitled *American Antiquities*, pretended extracts from a poem which they styled *The Anarchiad*. It was designed to check the spirit of anarchy then prevailing in the feeble Union. From 1789 to 1795 Mr. Trumbull was State attorney for Hartford; and in 1792 and 1800 he was a member of the legislature. He was a judge of the Supreme Court for eighteen years (1801-19), and judge of the court of errors in 1808. In 1825 he removed to Detroit, Mich., where he died, May 10, 1831.

Trumbull, JOHN, artist; born in Lebanon, Conn., June 6, 1756; son of Gov. Jonathan Trumbull; graduated at Har-

vard College in 1773. Having made an accurate sketch of the works around Boston in 1775, he attracted the attention of Washington, who, in August of that year, made him one of his aides-de-camp. He became a major of brigade, and in 1776 deputy adjutant-general of the Northern Department, with the rank of colonel. In February, 1777, he retired from the army, and went to London to study painting under West. On the execution of Major André (October, 1780), he was seized and cast into prison, where he remained eight months. In 1786 he painted his *Battle of Bunker Hill*. From 1789 to 1793 he was in the United States, painting portraits for his historical pictures (now in the rotunda of the national Capitol) — *The Declaration of Independence*; *The Surrender of Burgoyne*; *The Surrender of Cornwallis*; and the *Resignation of Washington at Annapolis*. In 1794 Trumbull was secretary to Jay's mission to London, and was appointed a commissioner

JOHN TRUMBULL.

(1796) to carry the treaty into execution. He returned to the United States in 1804, and went back to England in 1808, when everything American was so unpopular that he found little employment. He came back, settled in New York, and assisted in founding the Academy of Fine Arts there, of which he was president in 1816-

TRUMBULL

25. Mr. Trumbull painted a large number of pictures of events in American history. In consideration of receiving from Yale College \$1,000 a year during his life, Colonel Trumbull presented to that institution fifty-seven of his pictures, which form the "Trumbull Gallery" there. The profits of the exhibition, after his death, were to be applied towards the education of needy students. He died in New York City, Nov. 10, 1843.

Trumbull, JONATHAN, patriot; born in Lebanon, Conn., Oct. 12, 1710; graduated at Harvard College in 1727; preached a few years; studied law; and became

tion and other supplies, and this want continued, more or less, for months. Trumbull was then governor of Connecticut.

THE TRUMBULL HOUSE, 1850.

JONATHAN TRUMBULL

a member of Assembly at the age of twenty-three. He was chosen lieutenant-governor in 1766, and became *ex-officio* chief-justice of the Superior Court. In 1768 he boldly refused to take the oath enjoined on officers of the crown, and in 1769 he was chosen governor. He was the only colonial governor who espoused the cause of the people in their struggle for justice and freedom. In the absence in Congress of the Adamses and Hancock from New England, Trumbull was considered the Whig leader in that region, and Washington always placed implicit reliance upon his patriotism and energy for support. When Washington took command of the Continental army at Cambridge, he found it in want of ammuni-

On one occasion, at a council of war, when there seemed to be no way to make provision against an expected attack of the enemy, the commander-in-chief said, "We must consult Brother Jonathan on the subject." He did so, and the governor was successful in supplying many of the wants of the army. When the army was afterwards spread over the country and difficulties arose, it was a common saying among the officers, as a by-word, "We must consult Brother Jonathan." The origin of these words were soon lost sight

GOVERNOR TRUMBULL'S WAR-OFFICE.

of, and "Brother Jonathan" became the title of our nationality, like that of "John Bull" of England. He died in Lebanon, Conn., Aug. 17, 1785.

Trumbull, JONATHAN, legislator; born in Lebanon, Conn., March 26, 1740; son of Governor Trumbull; graduated at Har-

TRUMBULL—TRUST PROSECUTIONS

vard College in 1759. When the Revolutionary War broke out, he was an active member of the Connecticut Assembly, and its speaker. From 1775 to 1778 he was paymaster of the Northern army; and in 1780 he was secretary and first aide to Washington, remaining in the military family of the commander-in-chief until the close of the war. He was a member of Congress from 1789 to 1795; speaker from 1791 to 1795; United States Senator in 1795-96; lieutenant-governor of Connecticut in 1796; and governor from 1797 until his death in Lebanon, Aug. 7, 1809.

Trumbull, JONATHAN, librarian; born in Norwich, Conn., Jan. 23, 1844; received an academic education; member of the Connecticut Historical Society; president of the Connecticut Society of the Sons of the American Revolution. He is the author of *The Lebanon War Office; The Defamation of Revolutionary Patriots: a Vindication of General Israel Putnam; Joseph Trumbull, First Commissary-General of the Continental Army; The Share of Connecticut in the Revolution*, etc.

Trumbull, JOSEPH, military officer; born in Lebanon, Conn., March 11, 1737; another son of Governor Trumbull; graduated at Harvard College in 1756; was made commissary-general of the Continental army in July, 1775. In November, 1777, he was made a commissioner of the board of war, which office he resigned in April, 1778, on account of ill health. He died in Lebanon, Conn., July 23, 1778.

Trumbull, LYMAN, legislator; born in Colchester, Conn., Oct. 12, 1813; taught when sixteen years of age; studied law at the Academy of Georgia, and was admitted to the bar in 1837; removed to Belleville, Ill.; was secretary of state in 1841; a justice of the State Supreme Court in 1848; Democratic member of the State legislature in 1854; and elected a United States Senator in 1855, 1861, and in 1867, serving for eighteen years. He abandoned the Democratic party on account of his opposition to the extension of slavery, and labored with the anti-slavery workers. He voted against the impeachment of President Johnson and afterwards acted with the Democratic party, and was its candidate for governor of Illinois in 1880. He supported Horace Greeley for President in

1872, and joined the Populists in 1894. He died in Chicago, Ill., June 25, 1896.

Trusts, combinations of manufacturers or business corporations who pool their interests, accepting in lieu thereof stock in the trust. Trusts claim that business can be conducted more cheaply this way, and that people are therefore benefited. On the other hand, it is claimed that trusts ruin business by driving out competition. A small dealer who refuses to join the trust finds the trust selling his line of goods in his neighborhood at prices below cost. Legislatures of various States have tried to devise a law that will protect the rights of the capitalists in the trusts and also the rights of small dealers. The Standard Oil Company was the first of the great trusts. The attempts of the Sugar Trust to influence legislation at Washington gave rise to a national scandal in 1894, when each Senator was asked to make a declaration whether he had dealt in sugar stock during the tariff debate. The greatest of all combinations was organized as the United States Steel Corporation, in March, 1901, with \$1,100,000,000 capital. On March 10, 1902, the United States Supreme Court decided the Illinois anti-trust law to be unconstitutional. Similar laws in Georgia, Indiana, Louisiana, Michigan, Mississippi, Montana, Nebraska, North Carolina, South Dakota, Tennessee, Texas, and Wisconsin were affected by this decision. The seven great industrial trusts and 311 smaller trusts, none having a capital of less than \$2,000,000, had 5,288 plants in 1905, with a total capital of \$7,246,342,533. The 111 franchise trusts and 16 railroad and allied trusts were capitalized at \$13,132,819,978. The total capitalization of all United States trusts was \$23,000,000,000.

Trust Prosecutions. The following list of suits brought and prosecutions instituted by the United States under the **SHERMAN ANTI-TRUST LAW** (*q. v.*) accompanied President Taft's special message to Congress on the trust question, Dec. 5, 1911:

PRESIDENT HARRISON'S ADMINISTRATION,
MARCH 4, 1889, TO MARCH 4, 1893.

[William H. Miller, Attorney-General,
March 5, 1889, to March 6, 1893.]

1.—United States v. Jellico Mountain Coal

TRUST PROSECUTIONS

Company, 43 Fed. Rep., 898; 46 Fed. Rep., 432. (Circuit Court, M. D. Tennessee. October 13, 1890; June 4, 1891.)

Suit against the members of the "Nashville Coal Exchange," composed of various coal-mining companies operating mines in Kentucky and Tennessee, and of persons and firms dealing in coal in Nashville, formed for the purpose of fixing prices and regulating the output of coal. A preliminary injunction was denied on October 13, 1890. Upon full hearing the court, on June 4, 1891, held the combination to be in violation of the anti-trust law and enjoined the further carrying out of the agreement.

2.—United States v. Greenhut et al., 50 Fed. Rep., 469. (District Court, Massachusetts. May 16, 1892.)

A proceeding by indictment against the officers of the Distilling and Cattle Feeding Co. (Whisky Trust) for an alleged violation of the anti-trust law. Indictment quashed, as allegations were held not to constitute an offence under the statute.

3.—United States v. Nelson, 52 Fed. Rep., 646. (District Court, Minnesota. October 10, 1892.)

Indictment of a number of lumber dealers for conspiring together to raise the price of lumber in violation of the anti-trust law. Demurrer to indictment sustained, the court holding that an agreement between a number of dealers to raise prices, unless they controlled nearly the entire commodity, could not operate as a restraint of trade under the act.

4.—United States v. Trans-Missouri Freight Association, 53 Fed. Rep., 440; 58 Fed. Rep., 58; 166 U. S., 290. (Circuit Court, Kansas. November 28, 1892.) (Circuit Court of Appeals, Eighth Circuit. October 2, 1893.) (United States Supreme Court. March 22, 1897.)

Bill filed January 6, 1892, to enjoin the operations of a combination of railroads engaged in interstate commerce formed for the purpose of maintaining "just and reasonable rates," etc. Bill dismissed by Circuit Court; decree of dismissal affirmed by Circuit Court of Appeals, and reversed by the United States Supreme Court on March 22, 1897.

5.—United States v. Workingmen's Amalgamated Council of New Orleans et al., 54 Fed. Rep., 994; 57 Fed. Rep., 85. (Circuit Court, E. D. Louisiana. March 25, 1893.) (Circuit Court of Appeals, Fifth Circuit. June 13, 1893.)

Suit to restrain defendants, a combination of workmen, from interfering with interstate and foreign commerce in violation of the anti-trust law. The injunction was granted and the law held to apply to combinations of laborers as well as capitalists. This decree was affirmed by the Circuit Court of Appeals.

6.—United States v. Patterson et al., 55 Fed. Rep., 605; 59 Fed. Rep., 280. (Circuit Court, Massachusetts. February 28 and June 7, 1893.)

Cash-register case. Indictment of members of a combination formed for the purpose of controlling the price of cash registers. A demurrer was sustained as to certain counts of the indictment and overruled as to others and leave granted to file special demurrers to the counts which were sustained. The special demurrers were heard on June 1, 1893, and the demurrers overruled, the court adhering to its former ruling. Letter of Attorney-General, Oct. 16, 1893, shows case was allowed to lapse because of consolidation of complaining witness with defendants.

7.—United States v. E. C. Knight Company (Sugar Trust), 60 Fed. Rep., 306; 60 Fed. Rep., 934; 156 U. S., 1. (Circuit Court, E. D. Pennsylvania. Jan. 30, 1894.) (Circuit Court of Appeals, Third Circuit. March 26, 1894.) (United States Supreme Court. Jan. 21, 1895.)

Bill in equity to enjoin the operations of the Sugar Trust, charged with a violation of the anti-trust law. The bill was dismissed Jan. 30, 1894. Appeal was taken to the Circuit Court of Appeals and the decree affirmed. From this decision an appeal was taken to the Supreme Court of the United States, where the decree of dismissal was affirmed.

PRESIDENT CLEVELAND'S SECOND ADMINISTRATION, MARCH 4, 1893, TO MARCH 4, 1897.

[Richard Olney, Attorney-General, March 6, 1893, to June 7, 1895; Judson Har-

TRUST PROSECUTIONS

mon, Attorney-General, June 8, 1895, to March 5, 1897.]

- 1.—United States v. Agler, 62 Fed. Rep., 824. (Circuit Court, Indiana. July 12, 1894.)

Information charging contempt of court in disobeying an injunction restraining Agler and others from interfering with interstate commerce and obstructing the mails. Information quashed. It was charged that Agler was a member of the American Railway Union, the members of which order were on a strike and had been enjoined under the anti-trust law from interfering with the carrying of the mails and from obstructing interstate commerce. This is one of the "Debs" cases.

- 2.—United States v. Elliott, 62 Fed. Rep., 801; 64 Fed. Rep., 27. (Circuit Court, E. D. Missouri. July 6 and October 24, 1894.)

Suit to restrain Elliott, Debs, and others, members of the American Railway Union, from carrying out their unlawful conspiracy to interfere with interstate commerce and to obstruct the carrying of the mails, in violation of the anti-trust law. Preliminary injunction granted. A demurrer to this bill was overruled.

- 3.—United States v. Debs et al., 64 Fed. Rep., 724. (Circuit Court, N. D. Illinois, December 14, 1894.)

Proceedings in contempt to punish Debs and others for disobeying an injunction restraining them from interfering with interstate commerce and with obstructing the mails, by means of a conspiracy, in violation of the anti-trust law. Defendants found guilty and punished.

- 3a.—In re Debs, petitioner, 158 U. S., 564. (United States Supreme Court. May 27, 1895.)

Proceedings instituted July 2, 1894. Application for a writ of *habeas corpus* to secure a discharge from imprisonment for disobeying an injunction of the Circuit Court for the Northern District of Illinois, restraining Debs and others from conspiring to interfere with interstate commerce, in violation of the anti-trust law.

Petition for the writ denied.

- 4.—United States v. Cassidy, 67 Fed. Rep., 698. (District Court, N. D. California. April 1 and 2, 1895.)

Cassidy and others were indicted under section 5440, United States Revised Statutes, for conspiring to commit offences against the United States, which acts consisted in a combining and conspiring to restrain trade and commerce between the States, in violation of the anti-trust law, and grew out of the Pullman strike in California. The trial lasted five months and resulted in a disagreement of the jury.

- 5.—Moore v. United States, 85 Fed. Rep., 465. (Circuit Court of Appeals, Eighth Circuit. Feb. 14, 1898.)

Indictment of the members of an association of dealers in coal at Salt Lake City for entering into a conspiracy to regulate the price of coal. Indictment returned Nov. 4, 1895. Moore was tried and convicted in the District Court of Utah upon this indictment. The Circuit Court of Appeals reversed the judgment of conviction, for the reason that upon the admission of Utah as a State it was no longer a "Territory" within the meaning of the anti-trust act, and the combination was not in restraint of interstate commerce, and the court therefore had no jurisdiction of the offence.

- 6.—United States v. Joint Traffic Association, 76 Fed. Rep., 895; 89 Fed. Rep., 1020; 171 U. S., 505. (Circuit Court, S. D. New York. May 28, 1896.) (Circuit Court of Appeals, Second Circuit. March 19, 1897.) (United States Supreme Court. Oct. 28, 1898.)

Suit instituted Jan. 8, 1896. Bill in equity to enjoin the alleged violation of the anti-trust law by a combination of railroads. The Circuit Court dismissed the bill, and the Court of Appeals affirmed the action of the Circuit Court. These judgments were reversed by the United States Supreme Court.

- 7.—United States v. Addyston Pipe and Steel Company, 78 Fed. Rep., 712; 85 Fed. Rep., 271; 175 U. S., 211. (Circuit Court of Appeals, Sixth Circuit, Feb. 8, 1898.) (United States Supreme Court, Dec. 4, 1899.)

Suit instituted Dec. 10, 1896. Bill in equity to enjoin the operations of the Cast-Iron Pipe Trust, which attempted to control the price of cast-iron pipe. The bill was dismissed by the Circuit Court.

TRUST PROSECUTIONS

The Circuit Court of Appeals reversed the decree of the Circuit Court and remanded the case, with instructions to enter a decree for the government. On appeal to the Supreme Court the action of the Circuit Court of Appeals was affirmed.

8.—United States v. Hopkins et al., 82 Fed. Rep., 529; 84 Fed. Rep., 1018; 171 U. S. 58. (Circuit Court, Kansas. Sept. 2, 1897.) (Circuit Court of Appeals, Eighth Circuit, Dec. 27, 1887.) (United States Supreme Court, Oct. 24, 1898.)

Suit instituted Dec. 31, 1896. Bill to restrain the operations of the "Kansas City Live Stock Exchange," organized to control shipments of live-stock. The injunction was granted, but on appeal the Supreme Court reversed the decree of the Circuit Court and remanded the case, with instructions to dismiss the bill.

PRESIDENT MCKINLEY'S ADMINISTRATION
—MARCH 4, 1897—SEPTEMBER 14, 1901.

[Joseph McKenna, Attorney-General, March 5, 1897, to June 25, 1898; John W. Griggs, Attorney-General, June 25, 1898, to March 29, 1901; Philander C. Knox, Attorney-General, April 5, 1901, to June 30, 1904.]

1.—Anderson v. United States, 82 Fed. Rep., 998; 171 U. S., 604. (Circuit Court, N. D. Missouri. —.) (Circuit Court of Appeals, Eighth Circuit. —.) United States Supreme Court, Oct. 24, 1898.)

Bill in equity to restrain the operations of "The Traders' Live Stock Exchange," of Kansas City, an association formed for the purpose of buying cattle on the market. This suit was instituted June 7, 1897, in the Circuit Court of the United States for the Western District of Missouri. Decree of temporary injunction was granted and the case appealed to the Circuit Court of Appeals for the Eighth Circuit. From there it was certified to the Supreme Court of the United States for instructions upon certain questions, under the provisions of section 6 of the act of March 3, 1891 (26 Stat., 828). The Supreme Court reversed the decree of the Circuit Court and remanded the case, with directions to dismiss the bill, holding that the acts complained of were not a violation of the anti-trust law.

2.—United States v. Coal Dealers' Association, 85 Fed. Rep., 252 (Circuit Court, N. D. California. Jan. 28, 1898.)

Suit brought Dec. 16, 1897. Bill for injunction to restrain the operations of a combination of coal dealers known as the "Coal Dealers' Association of California." A temporary injunction was granted.

3.—United States vs. Chesapeake and Ohio Fuel Company et al., 105 Fed. Rep., 93; 115 Fed. Rep., 610. (Circuit Court, S. D. Ohio. Aug. 31, 1900.) (Circuit Court of Appeals, Sixth Circuit. April 8, 1902.)

Bill filed May 8, 1899, to annul a contract and dissolve a combination of producers and shippers of coal in Ohio and West Virginia, engaged in mining coal and making coke intended for "Western shipment," under agreement to sell the same at not less than a memorandum price, to be fixed by an executive committee appointed by the producers. Defendants enjoined, contract declared illegal, and the combination dissolved. Affirmed by Circuit Court of Appeals. No appeal taken.

PRESIDENT ROOSEVELT'S ADMINISTRATION
SEPT. 14, 1901—MARCH 4, 1909

[Philander C. Knox, Attorney-General, April 5, 1901, to June 30, 1904; William H. Moody, Attorney-General, July 1, 1904, to Dec. 16, 1906; Charles J. Bonaparte, Attorney-General, Dec. 17, 1906, to March 4, 1909.]

1.—United States vs. Northern Securities Company, Great Northern Railway Company, Northern Pacific Railway Company, et al., 120 F. R., 721; 193 U. S., 197. (Circuit Court, Minnesota. April 9, 1903.) (United States Supreme Court. March 14, 1904.)

This suit was brought on March 10, 1902, in the Circuit Court of the United States for the District of Minnesota, to enjoin the defendant, the Northern Securities Company, from purchasing, acquiring, receiving, holding, voting, or in any manner acting as the owner of any of the shares of the capital stock of the two defendant railway companies, and to restrain the defendant railway companies from permitting the securities company to vote any of the stock of said railways, or from exercising any control whatsoever over the corporate acts of either of said

TRUST PROSECUTIONS

railway companies, it being charged that the securities company was formed for the purpose of acquiring a majority of the capital stock of the two railway companies in order that it might in that way effect practically a consolidation of the two companies by controlling rates and restricting and destroying competition, in violation of the Sherman anti-trust law. The Circuit Court on April 9, 1903, entered a decree in favor of the government as prayed in the petition, and this decree was, on March 14, 1904, affirmed by the Supreme Court of the United States.

2.—United States v. Swift & Co. et al. (122 F. R., 529; 196 U. S., 375.)

Suit brought on May 10, 1902, in the Circuit Court of the United States for the Northern District of Illinois to restrain the defendants (commonly known as the Beef Trust), who are engaged in the buying of live-stock and the selling of dressed meats, from carrying out an unlawful conspiracy entered into between themselves and with the various railway companies, to suppress competition and to obtain a monopoly in the purchase of live-stock and in the selling of dressed meats. A preliminary restraining order was granted on May 20, 1902. The defendants having demurred to the bill, the court, after hearing, on April 18, 1903, overruled the demurrers and granted a preliminary injunction. The defendants having failed to answer, the court, on May 26, 1903, entered an order making the decree final and perpetually enjoining the further operations of the trust. The defendants, on August 14, 1903, appealed from the final decree of the Circuit Court to the Supreme Court of the United States, where decree was affirmed January 30, 1905.

3.—United States v. The Federal Salt Company et al.

Suit brought in the Circuit Court of the United States for the Northern District of California, on October 15, 1902, to restrain the defendants (known as the Salt Trust) from unlawfully combining and conspiring to suppress competition in the manufacture and sale of salt in the States west of the Rocky Mountains, in violation of the Sherman anti-trust law. A temporary restraining order was issued on that date, and the cause coming on for hearing, the court, on November 10, 1902,

granted an injunction *pendente lite*, thus, in effect, making the restraining order perpetual.

No appeal was taken from this order.

4.—United States v. The Federal Salt Company.

On February 28, 1903, the grand jury for the United States District Court for the Northern District of California returned an indictment against the Salt Trust for having violated the anti-trust law. On May 12, 1903, the trust pleaded guilty and the court sentenced it to pay a fine of \$1,000, which was paid.

5.—United States v. Jacksonville Wholesale Grocers' Association.

A proceeding in equity, instituted on September 12, 1903, in the United States Circuit Court for the Southern District of Florida for the purpose of dissolving a combination of wholesale grocers, operating in violation of the anti-trust law. November 1, 1907, dismissed.

6.—United States v. General Paper Co.

December 27, 1904, a bill in equity was filed in the Circuit Court of the United States for District of Minnesota against the General Paper Co. and twenty-three other corporations engaged in the manufacture and sale of paper, alleging that they had entered into a combination and conspiracy to restrain trade and commerce in the manufacture of news print, manila, fibre, and other papers by making the General Paper Co. their common sales agent. On May 11, 1906, the court ordered judgment in favor of the government, dissolving the combination and affording all relief prayed in the bill. (See also Nelson v. United States, 201 U. S., 92; Alexander v. United States, id., 117.)

7.—United States v. Armour & Co. et al.

After the affirmation by the Supreme Court of the decree of the Circuit Court in United States v. Swift & Company (above referred to) complaints from various quarters were made to the department that the combination still continued. The department thereupon began an exhaustive inquiry before the grand jury for the northern district of Illinois, which resulted in the return of an indictment on July 1, 1905, against Armour & Co., J. Ogden Armour, president; Patrick A. Valentine, treasurer; Arthur Neekler, general manager; Thomas J. Connors, su-

TRUST PROSECUTIONS

perintendent, and Samuel A. McRoberts, assistant treasurer, of Armour & Co.; the Armour Packing Co., and Charles W. Armour, president; Swift & Co., and Louis F. Swift, president; Lawrence A. Carton, treasurer; D. Edwin Hartwell, secretary, and Albert H. Veeder and Robert C. McManus and Arthur F. Evans, agents of Swift & Co.; the Fairbank Canning Co., and Edward Morris, vice-president; Ira N. Morris, secretary of the Fairbank Canning Co.; the Cudahy Packing Co., and Edward A. Cudahy, vice-president and general manager of the Cudahy Packing Co. Against this indictment many preliminary objections were urged. All were disposed of in favor of the government, except certain special pleas of immunity in bar, based upon information concerning the matters for which the defendants were indicted, which they had given to the Department of Commerce and Labor. The court sustained the pleas so far as the individual defendants were concerned and overruled them with respect to the corporations.

8.—United States v. MacAndrews & Forbes Company et al. (149 Fed., 823; 212 U. S., 585.)

In June, 1906, the grand jury returned an indictment against MacAndrews & Forbes Company, the J. S. Young Company, a corporation of Maine, and Karl Jungbluth and Howard E. Young, their respective presidents, for illegally combining and conspiring to regulate the interstate trade and sale in licorice paste, an article used in the manufacture of plug and smoking tobacco, snuff, and cigars. Defendants entered pleas of not guilty, with leave to withdraw or demur on or before July 9, 1906. July 9, 1906, demurrers filed by all of the defendants, Dec. 4, 1906, demurrers overruled. Dec. 19, 1906, trial commenced. Jan. 10, 1907, MacAndrews & Forbes Company was found guilty on first and third counts of indictment, the J. S. Young Company guilty on first and third counts; verdict of acquittal as to individual defendants. MacAndrews & Forbes Company fined \$10,000. J. S. Young Company fined \$8,000.

8A.—The Tobacco Trust Cases. (Hale v. Henkel, 201 U. S., 43; McAlister v. Henkel, id., 90; 149 Fed., 823; 212 U. S., 585.)

These cases grew out of an investigation by a federal grand jury in the Southern District of New York of the American Tobacco Company and the MacAndrews & Forbes Company, believed to be violating the anti-trust laws, the matter having been brought to the attention of the grand jury by the officers of the Department of Justice, special counsel having been appointed for the purpose of investigation and prosecution. Subpoenas *duces tecum* were served upon the officers of the companies directing them to produce papers and other documentary evidence belonging to the corporations. They refused to obey the subpoena to answer questions propounded to them. The Circuit Court adjudged them in contempt and committed them until they should produce the books and answer the questions. They appealed to another judge of the same court for writs of *habeas corpus*, which, upon hearing, were discharged. Upon appeal the Supreme Court affirmed the orders denying the writs.

9.—United States v. Metropolitan Meat Company et al.

Bill filed in equity in October, 1905, in the United States Circuit Court for Hawaii, to restrain the operation of alleged unlawful combinations in restraint of the trade in beef and beef products. Demurrer to bill overruled October 2, 1906. Pending.

10.—United States v. Nome Retail Grocers' Association.

November 4, 1905, the department directed the United States attorney for the Second Division of Alaska to file a bill in equity against the Nome Retail Grocers' Association, alleging a combination to fix prices and to suppress competition. Suit was promptly instituted, whereupon the defendants agreed to the entry of a decree granting all the relief prayed for in the petition. A decree dissolving the combination was entered accordingly.

11.—United States v. Terminal Railroad Association of St. Louis et al.

Petition filed in Circuit Court of United States for the Eastern District of Missouri on December 1, 1905, to enjoin the defendant railroads from continuing an unlawful combination entered into between them to operate Eads Bridge and Merchants Bridge as a common agency of in-

TRUST PROSECUTIONS

terstate commerce. Upon disagreement of Circuit judges case was carried to the Supreme Court and was remanded by that court for further proceedings. Government then attempted to secure rehearing in the Circuit Court and failed, and appealed to the Supreme Court, where the case was argued and is awaiting decision.

12.—United States v. Allen & Robinson et al.

Bill filed in October in United States Circuit Court for the District of Hawaii, alleging unlawful combination to control the trade in lumber in that Territory. Answers filed January 2, 1906. Pending.

13.—United States v. Otis Elevator Co. et al.

Bill filed March 7, 1906, in the United States Circuit Court for the Northern District of California against the Otis Elevator Co. and a number of other corporations and individuals, in which it was alleged that they were maintaining a combination in restraint of trade in the matter of the manufacture and sale of elevators. June 1, 1906, a decree was entered by consent dissolving the combination and granting the relief prayed.

14.—United States v. F. A. Amsden Lumber Company et al.

Indictment returned in the District Court of Oklahoma May 4, 1906, for violation of the Sherman Act in restricting competition and maintaining prices in the sale of lumber. May 13, 1907, change of venue granted to Grant county. September 25, 1907, pleas of guilty and fines imposed aggregating \$2,000, which were paid.

15.—United States v. National Association of Retail Druggists et al.

Bill in equity filed May 9, 1906, in the United States Circuit Court for the District of Indiana against the National Association of Retail Druggists, alleging a combination in restraint of interstate trade in the sale of drugs and proprietary medicines. May 9, 1907, final decree entered by agreement, giving the government all the relief prayed for in the petition.

16.—United States v. Virginia-Carolina Chemical Company et al.

May 25, 1906, the federal grand jury for the Middle District of Tennessee, upon information furnished by the Department of Justice, returned an indictment against 31 corporations and 25 individuals en-

gaged in the fertilizer business in the States of North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Arkansas, and Tennessee, charging them with engaging in a conspiracy in violation of the federal anti-trust act and with conspiring to commit an offence against the United States—viz., the aforesaid conspiracy, in violation of section 5440 of the Revised Statutes. The fertilizer manufacturers combined to fix the price of fertilizers in the territory mentioned and to apportion the trade among themselves according to an agreed percentage. July 11, 1906, all the defendants appealed to the Supreme Court of the United States from an order of the Circuit Court of the Eastern District of Virginia denying the right of *habeas corpus* and remanding them to the custody of the marshal for removal to the Middle District of Tennessee for trial. The case before the Supreme Court was argued on December 3, 1906, and on March 4, 1907, the judgment of the Circuit Court for the Eastern District of Virginia was reversed and the case remanded to that court for further proceedings in accordance with the opinion of the Supreme Court. April 17, 1908, various motions, pleas in abatement, and demurrers filed. July 3, 1908, certain motions and demurrers overruled, plea in abatement allowed, and indictment quashed.

17.—United States v. American Ice Company et al.

July 12, 1906, indictment returned in the Supreme Court of the District of Columbia, charging an unlawful agreement to control prices and restrict competition in the sale of ice. Case pending.

18.—United States v. Chandler Ice and Cold Storage Plant et al.

Sept. 19, 1906, indictment returned in the District Court for the Territory of Oklahoma against the Chandler Ice and Cold Storage Plant, and others, charging a combination to apportion territory in the matter of the sale of ice. May 5, 1907, demurrer filed by defendant Groves and overruled. May 20, 1907, demurrer filed by Chandler Ice and Cold Storage plant. Dismissed.

19.—United States v. Alfred M. Gloyd et al.

Sept. 21, 1906, indictment returned

TRUST PROSECUTIONS

against Alfred M. Gloyd and others in the District Court for the Territory of Oklahoma, charging a combination to maintain prices and restrict competition in the sale of lumber. Dismissed.

20.—United States v. People's Ice and Fuel Company, a corporation, and W. B. Lount.

Oct. 23, 1906, indictment returned in the District Court for the Territory of Arizona, charging a combination to control prices and restrict competition in the sale of ice. Jan. 5, 1907, trial commenced. Verdict not guilty as to People's Ice and Fuel Company and company held to next grand jury. Trial of W. B. Lount continued over term. Oct. 16, 1907, plea in bar filed. Oct. 17, 1907, plea in bar sustained.

21.—United States v. Demund Lumber Company et al.

Oct. 23, 1906, indictment returned in the District Court for the Territory of Arizona, charging a combination to control prices and restrict competition in the sale of lumber. Jan. 2, 1907, trial commenced. Verdict of not guilty as to Demund Lumber Company. Jan. 7, 1907, cases against Chamberlain Lumber Company and Valley Lumber Company continued over term. May 8, 1907, motion made to court to instruct for acquittal. Motion argued and taken under advisement, May 9, 1907, motion sustained and verdict of acquittal returned.

22.—United States v. Phoenix Wholesale Meat and Produce Company, a corporation, P. T. Hurley and S. J. Tribolet.

Oct. 23, 1906, indictment returned in the District Court for the Territory of Arizona, charging a combination to control prices and restrict competition in the sale of meats. January 7, 1907, trial commenced. Verdict of not guilty as to Phoenix Wholesale Meat & Produce Co. January 8, 1907, indictment against Hurley dismissed. Verdict of guilty as to defendant S. J. Tribolet. Jan. 12, 1907, Tribolet sentenced to pay a fine of \$1,000. Jan. 9, 1907, case against Phoenix Wholesale Meat & Produce Co. dismissed. Appeal to the Supreme Court of the Territory of Arizona. Supreme Court affirmed decision of lower court. Fine paid.

23.—United States v. Standard Oil Com-

pany of New Jersey et al. (United States Circuit Court, En. Mo., 173 Fed., 177.) (United States Supreme Court, 221 U. S., 1.)

November 15, 1906, bill in equity filed in United States Circuit Court for the Eastern District of Missouri against the Standard Oil Co. and others, in which it is alleged that they are maintaining a combination in restraint of trade in the manufacture and sale of petroleum. Case argued in Circuit Court April, 1909; decision by unanimous court in favor of the government Nov. 20, 1909. Appealed to Supreme Court; argued March, 1910, reargued January, 1911, and judgment affirmed May 15, 1911.

24.—United States v. T. B. Hogg et al.

December 8, 1906, indictment returned in the District Court for the Territory of Oklahoma, charging a combination and conspiracy in restraint of trade and commerce in the sale of lumber. March 25, 1907, plea of not guilty. Change of judge granted on application of defendants. Dismissed.

25.—United States v. Atlantic Investment Company et al.

February 11, 1907, indictment returned in the United States District Court for the Southern District of Georgia against the Atlantic Investment Co. and others, charging a combination in restraint of trade and commerce in the matter of the manufacture and sale of turpentine. Feb. 18, 1907, four corporations and two individuals, defendants to this indictment, entered pleas of guilty, and the court imposed a fine of \$5,000 upon each of the six defendants, making a total of \$30,000.

26.—United States v. American Seating Company et al.

March 12, 1907, indictment returned in the District Court of the Northern District of Illinois charging a violation of the Sherman anti-trust law by engaging in a combination in restraint of trade in the manufacture and sale of school and church furniture. April 1, 1907, defendant corporations entered pleas of guilty, with one exception. May 20, 1907, fines imposed aggregating \$43,000. Defendant E. H. Stafford Manufacturing Co. filed demurrer April 3, 1907. May 31, 1907, demurrer overruled and plea of not guilty entered.

TRUST PROSECUTIONS

27.—United States v. American Seating Company et al.

March 12, 1907, bill in equity filed in the United States Circuit Court for the Northern District of Illinois against the American Seating Co. and others, in which it is alleged that they are maintaining a combination in restraint of trade in the manufacture and sale of school and church furniture. Aug. 15, 1907, decree entered granting perpetual injunction against all defendants, except E. H. Stafford Manufacturing Co., E. H. Stafford, E. M. Stafford, and E. G. Bentley.

28.—United States v. Santa Rita Mining Company and Santa Rita Store Company.

April 4, 1907, indictment returned in the district of New Mexico charging a violation of Section 3 of the Sherman anti-trust law by engaging in a combination in restraint of trade. Demurrer filed and overruled. Fine of \$1,000 imposed on each defendant; total \$2,000. Appeal taken to the Supreme Court of the Territory of New Mexico.

29.—United States v. The Reading Company et al. (United States Circuit Court, En. Pa., 183 Fed., 427.)

June 12, 1907, bill in equity filed in the Circuit Court for the Eastern District of Pennsylvania to dissolve a combination among the anthracite coal-carrying roads and others, alleged to be operating in violation of the Sherman law. Dec. 8, 1910, decision dismissing petition, except as to Temple Iron Co., which was adjudged illegal. Cross appeals taken to Supreme Court, where case was argued in October, 1911. Awaiting decision.

30.—United States v. National Umbrella Frame Company et al.

July 1, 1907, indictment returned in the District Court for the Eastern District of Pennsylvania charging a conspiracy to restrain interstate trade and commerce in the manufacture and sale of umbrella material, in violation of the Sherman anti-trust law and Section 5,440, R. S. Pleas of guilty entered and fines aggregating \$3,000 imposed.

31.—United States v. American Tobacco Company et al. (United States Circuit Court, Sn. N. Y., 164 Fed., 700.) (United States Supreme Court, 221 U. S., 106.)

Bill in equity filed July 10, 1907, by the United States against the American Tobacco Company and others, in which it was alleged that they were maintaining a combination in restraint of trade and commerce in the manufacture and sale of tobacco. Nov. 7, 1908, decision rendered in favor of the government, except as to individual defendants and certain foreign and other corporations. Cross appeals were taken to the Supreme Court, where case was argued March, 1910, and reargued January, 1911. May 29, 1911, a decision was rendered sustaining the government on every point.

32.—United States v. E. H. Stafford Manufacturing Company et al.

July 10, 1907, indictment returned in the District Court for the Northern District of Illinois charging a violation of the Sherman anti-trust law by engaging in a combination in restraint of trade in the manufacture and sale of school and church furniture. Case pending.

33.—United States v. E. I. du Pont de Nemours & Co. et al.

July 30, 1907, bill in equity filed in the Circuit Court for the District of Delaware against E. I. du Pont de Nemours & Co. and others, in which it is alleged that they are maintaining a combination in restraint of trade in the manufacture and sale of gunpowder and other high explosives. June 21, 1911, a decision was rendered holding combination illegal and ordering its dissolution. Negotiations are now under way for an agreement between counsel as to a form of decree of dissolution and injunction, to be submitted to the court for approval.

34.—United States v. One Hundred and Seventy-five Cases of Cigarettes.

Oct. 28, 1907, information filed in the District Court for the Eastern District of Virginia covering the seizure of 175 cases of cigarettes under Section 6 of the Sherman Anti-Trust Act. Case pending.

35.—United States v. H. D. Corbett Stationery Company et al.

Nov. 1, 1907, indictment returned in the District Court for the District of Arizona charging a combination in restraint of trade. Nov. 4, 1907, demurrer filed. Nov. 14, 1907, demurrers sustained and defendants referred to next grand jury. Oct.

TRUST PROSECUTIONS

28, 1908, reindicted. Nov. 6, 1908, verdict, not guilty.

36.—United States v. Union Pacific Coal Company et al., 173 Fed., 737.

Nov. 20, 1907, indictment returned in the District Court for the District of Utah, charging a conspiracy to violate and a violation of the Sherman Act. Jan. 6, 1908, demurrer filed. March 2, 1908, demurrer sustained as to first count and overruled as to second count. Dec. 3, 1908, verdict guilty. March 29, 1909, fines aggregating \$4,000 imposed. November, 1909, judgment reversed.

37.—United States v. Charles L. Simmons et al.

Jan. 20, 1908, indictment returned in the District Court for the Southern District of Alabama charging a combination in restraint of trade and commerce in the matter of the manufacture and sale of plumbers' supplies. Dec. 1, 1910, pleas of guilty, and fines aggregating \$265 imposed.

38.—United States v. Union Pacific Railroad Company et al.

Feb. 1, 1908, a bill in equity was filed in the District Court of the United States for the District of Utah, charging a combination and conspiracy in violation of the Sherman Act on the part of the so-called Harriman lines. June 23, 1911, decision by Circuit Court to the effect that the roads involved were not competing lines and hence the combination was not a violation of law, Hook, J., dissenting. The government has appealed to Supreme Court. Case set for argument at January term, 1912.

39.—United States v. E. J. Ray et al.

Feb. 14, 1908, indictment returned in the Circuit Court for the Eastern District of Louisiana against seventy-two laborers, charging a combination and conspiracy in restraint of foreign trade and commerce, in violation of the Sherman Act.

40.—United States v. E. J. Ray et al.

February 15, 1908, indictment returned in the Circuit Court for the Eastern District of Louisiana against seventy-two laborers, charging a combination and conspiracy in restraint of interstate trade and commerce, in violation of the Sherman Act. January 26, 1911, cases consolidated for trial. Verdict of guilty as to three defendants and fines amounting to \$110 imposed.

41.—United States v. Joseph Stiefvater et al.

Feb. 15, 1908, indictment returned in the United States Circuit Court for the Eastern District of Louisiana, charging a combination in restraint of trade and commerce in the matter of the manufacture and sale of plumbers' supplies. June 25, 1910, dismissed.

42.—United States v. American Naval Stores Company et al. (151 Fed., 834; charge to grand jury, 186 Fed., 592.)

April 11, 1908, indictment returned in the United States Circuit Court for the Southern District of Georgia, charging a combination in restraint of trade and commerce in the matter of the manufacture and sale of turpentine. May 10, 1909, verdict guilty as to five individual defendants. Fines aggregating \$17,500 imposed and two defendants sentenced to three months in jail. Appealed to Circuit Court of Appeals and judgment affirmed. Certiorari granted to Supreme Court, where case is now pending.

43.—United States v. New York, New Haven, and Hartford Railroad Company et al. (165 Fed., 742.)

May 22, 1908, a bill in equity was filed in the Circuit Court of the United States for the District of Massachusetts, charging the New Haven Company with combining and attempting to combine under one common control the various railroad and electric railway systems in New England in violation of the Sherman Act. Dismissed June 26, 1909.

44.—United States v. John H. Parks et al.

June 16, 1908, indictment returned in the Circuit Court of the United States for the Southern District of New York, charging a combination in restraint of trade in the matter of the manufacture and sale of paper. June 19, 1908, defendants pleaded guilty and were sentenced to pay fines aggregating \$50,000, which were paid.

PRESIDENT TAFT'S ADMINISTRATION, MARCH 4, 1909.

[George W. Wickersham, Attorney-General, March 4, 1909.]

1.—United States v. American Sugar Refining Company et al.

Indictment under Sherman law July 1, 1909. A plea of the statute of limitations

TRUST PROSECUTIONS

was interposed by the defendant, Kissell, which was taken to the Supreme Court, where it was decided in favor of the government. (See *U. S. v. Kissell*, 218 U. S., 601.) Pending.

2.—United States v. Albia Box & Paper Company et al.

December 7, 1909, indictment returned in Southern District of New York charging combination in restraint of trade in paper board. Feb. 7, 1910, all defendants pleaded guilty and fines aggregating \$57,000 were assessed.

3.—United States v. John S. Steers et al.

Indictment returned in Eastern District of Kentucky Feb. 17, 1910, charging conspiracy to restrain trade. This is the so-called "Night Rider" case, where the restraint consisted in preventing the shipment of tobacco in interstate commerce by means of violence and intimidation. After the overruling of demurrers and various pleas in abatement a trial was had, and on April 16, 1910, a verdict of guilty was returned as to eight of twelve defendants and fines aggregating \$3,500 imposed. Appealed to Circuit Court of Appeals, argued November, 1911, and awaiting decision.

4.—United States v. Imperial Window Glass Company et al.

Indictment found in Western Pennsylvania, April 7, 1910, charging combination and conspiracy to enhance the price of window-glass. Demurrers to the Indictment were overruled, and on November 10, 1910, pleas of *nolo contendere* were entered and fines aggregating \$10,000 and costs were imposed.

5.—United States v. National Packing Company et al.

Indictment returned in Northern District of Illinois March 2, 1910, charging combination to restrain trade in fresh meats. Demurrer to indictment sustained June 23, 1910.

6.—United States v. National Packing Company et al.

Northern Illinois. Bill in equity charging combination in restraint of trade in fresh meats and praying for dissolution filed March 21, 1910. Dismissed in order to facilitate the prosecution of later criminal case.

7.—United States v. Armour Packing Company et al.

Indictment returned at Savannah, Ga., in April, 1910, charging combination to control prices and restrict competition. Case now pending.

8.—United States v. Missouri Pacific Railroad Company and twenty-four other railroads.

Petition to restrain violation of Sherman law filed May 31, 1910, and temporary restraining order issued on that day enjoining advances in freight rates in Western trunk-line territory, which would have become effective June 1, 1910. Thereupon the railroads, after consultation with the President, withdrew their proposed advances in freight rates, and after the passage of the act of June 18, 1910, the matter was referred to the Interstate Commerce Commission. Thereafter the Interstate Commerce Commission enjoined the rate advances which the temporary restraining order obtained by the department on May 31, 1910, had prevented from going into effect.

9.—United States v. Southern Wholesale Grocers' Association.

Bill in equity charging combination to regulate prices of necessities of life, filed at Birmingham, Ala., June 9, 1910. An agreement was reached between the government and defendant's counsel, and a decree prepared, submitted to, and passed by the court Oct. 17, 1911, perpetually restraining the association, its officers, and members from doing any and all of the acts complained of.

10.—United States v. Great Lakes Towing Company et al.

Petition filed in Northern District of Ohio on June 19, 1910, against an alleged combination of towing facilities on the Great Lakes. The taking of testimony is nearing completion, and the case will be assigned for an early hearing.

11.—United States v. Chicago Butter and Egg Board.

Bill asking for dissolution, filed at Chicago, June 13, 1901. A demurrer to the petition was sustained, with leave to amend. An amended bill has been filed, and the case is now pending.

12.—United States v. Frank Hayne, James A. Patten, et al. (180 Fed., 946.)

Indictments returned, New York City, against alleged cotton-pool conspirators, Aug. 4, 1910. Demurrers were sustained

TRUST PROSECUTIONS

as to certain counts of indictment and overruled as to others, and the government appealed to the Supreme Court, where case was argued November, 1911. Awaiting decision.

13.—United States v. Standard Sanitary Manufacturing Company et al.

Petition filed at Baltimore July 22, 1910, charging a combination, under cover of a patent licensing arrangement, to restrain competition and enhance prices of enamel ware. Four volumes of testimony were taken, and case set for argument at Richmond on June 15, 16, and 17, 1911. In a decision rendered Oct. 13, 1911, the court sustained all the government's contentions.

14.—United States v. Louis F. Swift et al.

Indictment returned by the grand jury at Chicago in September, 1910, against ten prominent individuals engaged in the meat-packing industry. Defendants have filed numerous pleas in bar, demurrers, etc., all of which were decided in favor of the government, and an early trial will be held. Defendants applied to Circuit Judge Kohlsaat for writ of certiorari based on contention that anti-trust law was unconstitutional. Petition dismissed. Defendants appealed to Supreme Court and gave notice of motion December 4, 1911, for stay of trial pending appeal. Trial postponed until December 6.

15.—United States v. John Reardon & Sons Company and Consolidated Rendering Company.

Indicted jointly by federal grand jury at Boston in October, 1910. Demurrer to indictment sustained June 23, 1911.

16.—United States v. Ferdinand Sulzberger, doing business under the name of John Reardon & Sons Company, and Horatio W. Heath of Boston, doing business as the Consolidated Rendering Company.

Jointly indicted at Boston in October, 1910, for violation of the Sherman law. Demurrer to indictment sustained June 23, 1911.

17.—United States v. Horatio W. Heath and Cyrus S. Hapgood.

Indictment returned in October at Boston, charging violation of the Sherman law. Demurrer to indictment sustained June 23, 1911.

(NOTE.—In the last three indictments,

which were found simultaneously, the government charges that the defendants have attempted to divide territory between themselves throughout New England, so as to avoid competition and drive out competitors in the hide and rendering business.)

18.—United States v. Standard Sanitary Manufacturing Company et al.

In addition to the above suit in equity (No. 13, supra) indictments were returned by grand jury at Detroit on December 6, 1910, against the same corporations and individuals charging the same acts. Various demurrers and dilatory pleas have been filed, argued, and overruled, and the case will be heard during the 1911 fall term of court.

19.—United States v. American Sugar Refining Company et al.

A suit in equity was filed in New York on November 28, 1910, against this corporation, its officers and agents, and its owned and controlled corporations, attacking it as a combination in restraint of trade and praying for its dissolution. Demurrers to bill set for argument December, 1911.

20.—United States v. General Electrical Company et al.

Bill in equity filed at Cleveland, Ohio, on March 3, 1911, charging a combination in incandescent electric lamps. This suit is the outcome of an extensive investigation into the electrical industry. Like the enameled-ware combination, it is founded on a cross-licensing arrangement under patents. A formal decree has been agreed upon between counsel for the government and the defendant companies, and was submitted to and passed by the Circuit Court, Oct. 12, 1911.

21.—United States v. Purrington et al.

Indictment returned in the Northern District of Illinois September 14, 1910, charging combination to restrain trade in paving bricks and paving blocks. Pending.

22.—United States v. Hamburg-Amerikanische Packetfahrt Actien Gesellschaft and others.

Trans-Atlantic steamship pool. Combination of steamship lines regulating steerage traffic on the Atlantic Ocean. Suit filed Jan. 4, 1911, at New York City. Demurrers to bill set for argument December, 1911.

TRUST PROSECUTIONS

23.—United States v. Eastern Retail Lumber Dealers' Association.

Suit in equity filed at New York on May 19, 1911, charging the Eastern States Lumber Dealers' Association, its officers and members, with conspiracy in restraint of trade through the instrumentality of black lists and trade agreements.

24.—United States v. Isaac Whiting, John K. Whiting, Charles H. Hood, Edward J. Hood, and William A. Graustein.

Indictment returned by the grand jury at Boston, Mass., on May 26, 1911, charging a combination to restrain trade in milk throughout the New England States.

25.—United States v. Isaac Whiting, John K. Whiting, Charles H. Hood, Edward J. Hood, and William A. Graustein, and William A. Hunter, secretary of Producers' Co.

May 26, 1911, indictment returned by the grand jury at Boston, Mass., charging a conspiracy to restrain trade in milk throughout the New England States.

26.—United States v. Lumber Secretaries' Bureau of Information et al.

Indictment returned June 23, 1911, in the Northern District of Illinois, charging that the secretaries of fourteen retail lumbermen's associations, covering twenty-three States from Pennsylvania to the Pacific coast, were in a conspiracy by means of a central controlling bureau to control the marketing of lumber by forcing the product through the retailer to the consumer, and restraining the trade of the manufacturer, wholesaler, and consumer, and eliminating competition for the trade of the consumer.

27.—United States v. Philip H. W. Smith et al.

Indictments returned at New York City June 29, 1911, against various individuals, charging violations of Sections 1 and 2 of the anti-trust law through the conduct and operation of the Underground Power Cable Association, Telephone Cable Association, Fine Magnet Wire Association, Wire Rope Manufacturers, Horseshoe Manufacturers' Association, Leaden-cased Rubber Cable Association, and the Rubber-covered Wire Association. To date nearly all the defendants have appeared and pleaded, and fines aggregating \$128,700 have been imposed.

28.—United States v. Periodical Publishing Company.

Bill in equity filed in New York in June, 1911, against the members of the so-called Magazine Trust.

29.—United States v. Jay B. Pearce et al. Indictment returned against certain manufacturers and jobbers at Cleveland, Ohio, July 19, 1911, for combination and conspiracy in the manufacture and sale of wall paper.

30.—United States v. Lake Shore & Michigan Southern R. R., Chesapeake & Ohio R. R., Hocking Valley R. R., Toledo & Ohio Central Ry., Kanawha & Michigan Ry., Zanesville & Western R. R., and others.

Bill in equity filed at Columbus, Ohio, Aug. 4, 1911, to enjoin combination and conspiracy in restraint of trade.

31.—United States v. Edward E. Hartwick et al.

Petition filed at Detroit, Mich., Aug. 31, 1911, alleging conspiracy and unlawful restraint of trade on the part of members of the Michigan Retail Lumber Dealers' Association, The Scout Publishing Company, and the Lumber Secretaries' Bureau of Information.

32.—United States v. Standard Wood Company et al.

Petition filed in the Circuit Court at New York City in September, 1911, against the members of the so-called Kindling Wood Trust, praying for injunction against the further carrying into effect of trade agreements and combination and conspiracy to monopolize trade.

33.—United States v. Hunter Milling Company, Blackwell Milling and Elevator Company, and Frank Foltz.

Indictment returned by grand jury to District Court for the Western District of Oklahoma, Sept. 10, 1911, on one count, charging violation of Section 1 of the Sherman Act.

34.—United States v. S. W. Winslow, Wm. Barbour, E. P. Howe, Ed. P. Hurd, Geo. W. Brown, and Jas. J. Storrow.

Two indictments returned by the grand jury at Boston, Mass., Sept. 19, 1911, charging combination, conspiracy, and monopoly in trade in shoe machinery.

35.—United States v. the Colorado and Wyoming Lumber Dealers' Association.

TRUST PROSECUTIONS

tion and the Lumber Secretaries' Bureau of Information.

Bill in equity filed at Denver, Col., Sept. 25, 1911, for injunction against defendants for conspiracy to restrain trade in lumber and its products.

36.—United States v. Willard G. Hollis et al.

Petition filed in October, 1911, at St. Paul, Minn., in the United States Circuit Court, against the Lumberman's Secretaries' Bureau of Information, The Lumberman Publishing Company, and certain individuals, alleging conspiracy and combination in the lumber trade.

37.—United States v. United States Steel Corporation and others.

Petition for injunction and dissolution filed at Trenton, N. J., Oct. 27, 1911.

The full text of the message, Dec. 5, 1911, of which the foregoing was an addenda, is as follows:

TO THE SENATE AND HOUSE OF REPRESENTATIVES:

This message is the first of several which I shall send to Congress during the interval between the opening of its regular session and its adjournment for the Christmas holidays. The amount of information to be communicated as to the operations of the government, the number of important subjects calling for comment by the Executive and the transmission to Congress of exhaustive reports of special commissions, make it impossible to include in one message of a reasonable length a discussion of the topics that ought to be brought to the attention of the national Legislature at its first regular session.

The Supreme Court Decisions.—In May last the Supreme Court handed down decisions in the suits in equity brought by the United States to enjoin the further maintenance of the Standard Oil Trust and of the American Tobacco Trust and to secure their dissolution. The decisions are epoch-making and serve to advise the business world authoritatively of the scope and operation of the anti-trust act of 1890. The decisions do not depart in any substantial way from the previous decisions of the court in construing and applying this important statute, but they

clarify those decisions by further defining the already admitted exceptions to the literal construction of the act. By the decrees they furnish a useful precedent as to the proper method of dealing with the capital and property of illegal trusts. These decisions suggest the need and wisdom of additional or supplemental legislation to make it easier for the entire business community to square with the rule of action and legality thus finally established and to preserve the benefit of reasonable competition.

In view of their great importance to the general public, fuller details are herewith given as to the following prosecutions: American Tobacco Co., American Sugar Co., Beef Trust; Express Companies, and Standard Oil Company.

The American Tobacco Case.—The American Tobacco corporations were made the target of the second big "trust" prosecution of recent years. Because the testimony taken in the Tobacco case was not so extensive as that in the Standard Oil, the two cases were before the Supreme Court for consideration at the same time.

The attempt of the government to dissolve the Tobacco corporation, as violating the Sherman anti-trust law, took shape on July 19, 1907, when a petition was filed in the United States Circuit Court at New York by the government asking that the American Tobacco Company, its officers, directors and affiliated corporations, be prevented and enjoined from restraining and monopolizing commerce in tobacco.

The restraints and the monopolies alleged by the government were said to have been obtained by an intricate system of corporate organization. It began in 1890, when the first American Tobacco Company was organized. The new company took over the business of five independent cigarette concerns. At the time the suit was started the merging of other corporations had so increased that a total of sixty-five American corporations, two English ones, and twenty-nine individuals, were made defendants.

The government claimed that all these subsidiary organizations were created with the definite purpose to destroy competition and that they accomplished that purpose.

TRUST PROSECUTIONS

Each step was attacked as a part of an unlawful plan, whose development and progress was advanced, it was charged, by duress, oppression, and unfair methods intended to drive out and keep out competitors and secure monopolies.

The defendants claimed that nothing was to be found in the organization of these corporations but the orderly, natural, and legitimate development of a great business. They said the acquisitions had been proper and that no intent to restrain trade or monopolize trade had prompted the creation of the corporations.

The Circuit Court decreed that the American Tobacco Company and its various subsidiaries were unlawful combinations, and restrained them from engaging in interstate or foreign commerce. From this both the defendants and the government appealed to the United States Supreme Court.

The appeals were argued before the Supreme Court, first in January, 1910. They were restored to the docket and argued a second time in January, 1911. For the government Attorney-General Wickersham and his special assistant, J. C. McReynolds, addressed the Court. For the defendants there appeared John G. Johnson, of Philadelphia; De Lancey Nicoll, Junius Parker, William B. Hornblower, and Sol. M. Stroock, of New York. On May 29th following, the Supreme Court rendered its decision, prepared by Chief-Justice White, which was unanimous, excepting the dissent of Justice Harlan on grounds similar to those he held in the Standard Oil case. The decision held the American Tobacco Company and all the elements composing it, both corporate and individual, to be a corporation in restraint of trade within the prohibition of the Sherman anti-trust law, and ordered its disintegration.

The court remanded the case to the Circuit Court with instructions to hear the parties for the purpose of dissolving the combination and recreating a new condition which should be in harmony with and not repugnant to the law. A period of six months, with discretion to extend that term by sixty days, was allowed to accomplish this disintegration, during which time the defendants were enjoined from doing anything to strength-

en or extend the combination. The Circuit Court was instructed, if such disintegration should not have been accomplished within the period allowed, either to prohibit by injunction the movement of the products of the combination in interstate or foreign commerce or to put the combination in the hands of a receiver. The Supreme Court reversed the Circuit Court to the extent of including within its mandate the United Cigar Stores Company, the British-American Tobacco Company and its subsidiaries, and the individual defendants in the original case, and it rejected the decree of the lower court and instructed it to follow the interpretation of the law laid down by the Supreme Court.

The chief-justice gave an extended history of the case and the evidence, and, before applying the remedy as above noted, discussed the construction and application of the anti-trust act as follows:

"If the anti-trust law is applicable to the entire situation here presented and is adequate to afford complete relief for the evils which the United States insists that situation presents, it can only be because that law will be given a more comprehensive application than has been affixed to it in any previous decision. This will be the case, because the undisputed facts as we have stated them involve questions as to the operation of the anti-trust law not hitherto presented in any case. Thus even if the ownership of stock by the American Tobacco Company in the accessory and subsidiary companies and the ownership of stock in any of those companies among themselves were held, as was decided in the Standard Oil Company case, to be a violation of the act and all relations resulting from such stock ownership were therefore set aside, the question would yet remain whether the principal defendant, the American Tobacco Company, and the five accessory defendants, even when divested of their stock ownership in other corporations by virtue of the power which they would continue to possess, even although thus stripped, would amount to a violation of both the first and second sections of the act.

Again, if it were held that the corporations, the existence whereof was due to a combination between such companies

TRUST PROSECUTIONS

and other companies, was a violation of the act, the question would remain whether such of the companies as did not owe their existence and power to combinations, but whose power alone arose from the exercise of the right to acquire and own property, would be amenable to the prohibitions of the act.

Yet further: If even this proposition was held in the affirmative, the question would remain whether the principal defendant, the American Tobacco Company, when stripped of its stock ownership, would be in and of itself within the prohibitions of the act, although that company was organized and took being before the anti-trust act was passed. Still further, the question would yet remain whether particular corporations which when bereft of the power which they possessed as resulting from stock ownership, although they were not inherently possessed of a sufficient residuum of power to cause them to be in and of themselves either a restraint of trade or a monopolization or any attempt to monopolize, should nevertheless be restrained because of their intimate connection and association with other corporations found to be within the prohibitions of the act.

The necessity of relief as to all these aspects, we think, seemed to the government so essential and the difficulty of giving to the act such a comprehensive and coherent construction as would be adequate to enable it to meet the entire situation led to what appears to us to be in their essence a resort to methods of construction not compatible one with the other. And the same apparent conflict is presented by the views of the act taken by the defendants when their contentions are accurately tested.

Thus the government, for the purpose of fixing the illegal character of the original combination which organized the old American Tobacco Company, asserts that the illegal character of the combination is plainly shown because the combination was brought about to stay the progress of a flagrant and ruinous trade war. In other words, the contention is that as the act forbids every contract and combination, it hence prohibits a reasonable and just agreement made for the purpose of ending a trade war.

But as thus construing the act by the rule of the letter which kills would necessarily operate to take out of the reach of the act some of the accessory and many subsidiary corporations, the existence of which depends not at all upon combination or agreement or contract, but upon mere purchases of property, it is insisted in many forms of argument that the rule of the construction to be applied must be the spirit and intent of the act, and therefore its prohibitions must be held to extend to acts, even if not within the literal terms of the statute, if they are within its spirit, because done with an intent to bring about the harmful results which it was the purpose of the statute to prohibit.

So as to the defendants, while it is argued on the one hand that the forms by which various properties were acquired, in view of the letter of the act, exclude many of the assailed transactions from condemnation, it is yet urged that giving to the act the broad construction which it should rightfully receive, whatever may be the form, no condemnation should follow, because, looking at the case as a whole, every act assailed is shown to have been but a legitimate and lawful result of the exertion of honest business methods brought into play for the purpose of advancing trade, instead of with the object of obstructing and restraining the same.

But the difficulties which arise from the complexity of the particular dealings which are here involved, and the situation they produce, we think, grow out of a plain misconception of both the letter and spirit of the anti-trust act. We say of the letter because, while seeking by a narrow rule of the letter to include things which it is deemed would otherwise be excluded, the contention really destroys the great purpose of the act, since it renders it impossible to apply the law to a multitude of wrongful acts which would come within the scope of its remedial purposes by resort to a reasonable construction, although they would not be within its reach by a too narrow and unreasonable adherence to the strict letter.

This must be the case unless it is possible in reason to say that for the purpose of including one class of acts which would not otherwise be embraced a lit-

TRUST PROSECUTIONS

eral construction, although in conflict with reason, must be applied, and for the purpose of including other acts which would not otherwise be embraced a reasonable construction must be resorted to. That is to say, two conflicting rules of construction must at one and the same time be applied and adhered to.

The obscurity and resulting uncertainty, however, is now but an abstraction because it has been removed by the consideration which we have given quite recently to the construction of the anti-trust act in the Standard Oil case. In that case it was held, without departing from any previous decision of the court, that as the statute had not defined the words restraint of trade, it became necessary to construe those words, a duty which could only be discharged by a resort to reason. We say the doctrine thus stated was in accord with all the previous decisions of this court, despite the fact that the contrary view was sometimes erroneously attributed to some of the expressions used in two prior decisions (the Trans-Missouri Freight Association and Joint Traffic cases, 166 U. S., 290, and 171 U. S., 505). That such view was a mistaken one was fully pointed out in the Standard Oil case, and is additionally shown by a passage in the opinion in the joint traffic case, as follows (171 U. S., 568), "the act of Congress must have a reasonable construction or else there would scarcely be an agreement or contract among business men that would not be said to have, indirectly or remotely, some bearing on interstate commerce, and possibly to restrain it."

Applying the rule of reason to the construction of the statute, it was held in the Standard Oil case that as the words restraint of trade at common law and in the law of this country at the time of the adoption of the anti-trust act only embraced acts or contracts or agreements or combinations which operated to the prejudice of the public interests by unduly restraining competition or unduly obstructing the due course of trade, or which, either because of their inherent nature or effect or because of the evident purpose of the acts, etc., injuriously restrained trade, that the words as used in the statute were designed to have, and

did have, a like significance. It was therefore pointed out that the statute did not forbid or restrain the power to make normal and usual contracts to further trade by resorting to all normal methods, whether by agreement or otherwise, to accomplish such purpose. In other words, it was held, not that acts which the statute prohibited could be removed from the control of its prohibition by a finding that they were unreasonable, but that the duty to interpret, which inevitably arose from the general character of the term restraint of trade, required that the words restraint of trade should be given a meaning which would not destroy the individual right to contract and render difficult, if not impossible, any movement of trade in the channels of interstate commerce—the free movement of which it was the purpose of the statute to protect.

The soundness of the rule that the statute should receive a reasonable construction, after further mature deliberation, we see no reason to doubt. Indeed, the necessity for not departing in this case from the standard of the rule of reason, which is universal in its application, is so plainly required in order to give effect to the remedial purposes which the act under consideration contemplates, and to prevent that act from destroying all liberty of contract and all substantial right to trade, and thus causing the act to be at war with itself by annihilating the fundamental right of freedom to trade which, on the very face of the act, it was enacted to preserve, is illustrated by the record before.

In truth, the plain demonstration which this record gives of the injury which would arise from and the promotion of the wrongs which the statute was intended to guard against which would result from giving to the statute a narrow, unreasoning, and unheard-of construction, as illustrated by the record before us, if possible serves to strengthen our conviction as to the correctness of the rule of construction, the rule of reason, which was applied in the Standard Oil case, the application of which rule to the statute we now, in the most unequivocal terms, re-express and reaffirm.

Coming, then, to apply to the case before us the act as interpreted in the

TRUST PROSECUTIONS

Standard Oil and previous cases, all the difficulties suggested by the mere form in which the assailed transactions are clothed become of no moment. This follows because, although it was held in the Standard Oil case that, giving to the statute a reasonable construction, the words restraint of trade did not embrace all those normal and usual contracts essential to individual freedom and the right to make which were necessary in order that the course of trade might be free, yet, as a result of the reasonable construction which was affixed to the statute, it was pointed out that the generic designation of the first and second sections of the law, when taken together, embraced every conceivable act which could possibly come within the spirit or purpose of the prohibitions of the law, without regard to the garb in which such acts were clothed. That is to say, it was held that, in view of the general language of the statute and the public policy which it manifested, there was no possibility of frustrating that policy by resorting to any disguise or subterfuge of form, since resort to reason rendered it impossible to escape by any indirection the prohibitions of the statute.

Considering, then, the undisputed facts which we have previously stated, it remains only to determine whether they establish that the acts, contracts, agreements, combinations, etc., which were assailed were of such an unusual and wrongful character as to bring them within the prohibitions of the law. They were, in our opinion, so overwhelmingly shown from the undisputed facts that it seems only necessary to refer to the facts as we have stated them to demonstrate the correctness of this conclusion. Indeed, the history of the combination is so replete with the doing of acts which it was the obvious purpose of the statute to forbid, so demonstrative of the existence from the beginning of a purpose to acquire dominion and control of the tobacco trade, not by the mere exertion of the ordinary right to contract and to trade, but by methods devised in order to monopolize the trade by driving competitors out of business, which were ruthlessly carried out upon the assumption that to work upon the fears or play upon the cupidity of com-

petitors would make success possible. We say these conclusions are inevitable, not because of the vast amount of property aggregated by the combination, not because alone of the many corporations which the proof shows were united by resort to one device or another. Again, not alone because of the dominion and control over the tobacco trade which actually exists, but because we think the conclusion of wrongful purposes and illegal combination is overwhelmingly established by the following considerations:

A.—By the fact that the very first organization or combination was compelled by a previously existing fierce trade war, evidently inspired by one or more of the minds which brought about and became parties to that combination.

B.—Because, immediately after that combination and the increase of capital which followed, the acts which ensued justify the inference that the intention existed to use the power of the combination as a vantage ground to further monopolize the trade in tobacco by means of trade conflicts designed to injure others, either by driving competitors out of the business or compelling them to become parties to a combination—a purpose whose execution was illustrated by the plug war which ensued and its results; by the snuff war which followed and its results and by the conflict which immediately followed the entry of the combination into England and the division of the world's business by the two foreign contracts which ensued; by the ever-present manifestation which is exhibited of a conscious wrongdoing; by the form in which the various transactions were embodied from the beginning, ever changing but ever in substance the same, now the organization of a new company, now the control exerted by the taking of stock in one or another or in several, so as to obscure the result actually attained, nevertheless uniform, in their manifestations of the purpose to restrain others and to monopolize and retain power in the hands of the few who, it would seem, from the beginning contemplated the mastery of the trade which practically followed; by the gradual absorption of control over all the elements essential to the successful manufacture of tobacco products, and placing such con-

TRUST PROSECUTIONS

trol in the hands of seemingly independent corporations, serving as perpetual barriers to the entry of others into the tobacco trade; by persistent expenditure of millions upon millions of dollars in buying out plants, not for the purpose of utilizing them, but in order to close them up and render them useless for the purposes of trade; by the constantly recurring stipulations, whose legality, isolatedly viewed, we are now considering, by which numbers of persons, whether manufacturers, stockholders, or employes, were required to bind themselves, generally for long periods, not to compete in the future.

Indeed, when the results of the undisputed proof which we have stated are fully apprehended, and the wrongful acts which they exhibit are considered, there comes inevitably to the mind the conviction that it was the danger which it was deemed would arise to individual liberty and the public well-being from acts like those which this record exhibits which led the legislative mind to conceive and to enact the anti-trust act, considerations which also serve to so clearly demonstrate that the combination here assailed is within the law as to leave no doubt that it is our plain duty to apply its prohibitions.

In stating summarily, as we have done, the conclusions which in our opinion are plainly deducible from the undisputed acts, we have not paused to give the reasons why we consider, after giving them great consideration, that the elaborate arguments advanced to give a different complexion to the case are wholly devoid of merit. We do not for the sake of brevity, moreover, stop to examine and discuss the various propositions urged in the argument at bar for the purpose of demonstrating that the subject-matter of the combination which we find to exist and the combination itself are not within the scope of the anti-trust law, because when rightly considered they are merely matters of intra-State commerce, and therefore subject alone to State control. We have done this because the want of merit in all the arguments advanced on such subjects is so completely established by the prior decisions of this court, as pointed out in the Standard Oil case, as not to require restatement.

Leading as this does to the conclusion that the assailed combination in all its aspects—that is to say, whether it be looked at from the point of view of stock ownership or from the standpoint of the principal corporation and the accessory or subsidiary corporations viewed independently, including the foreign corporations in so far as by the contracts made by them they became co-operators in the combinations—comes within the prohibitions of the first and second sections of the anti-trust act, it remains only finally to consider the remedy which it is our duty to apply to the situation thus found to exist.

The American Sugar Case.—In October, 1908, suit was brought by the United States government against the American Sugar Refining Company of New York to enforce the payment of duties alleged to have been evaded on imports of raw sugar by means of scale manipulation in the weighing houses in Brooklyn. It was charged that the company had systematically defrauded the customs from 1901 down to the close of 1907 and that the duties evaded amounted to several million dollars. In a test case tried in New York the jury brought in a verdict March 5, 1909, awarding the government \$134,116. The federal officials thereupon began preparations to press the other cases to trial, but the company, which practically admitted the justice of the claims, settled by paying \$2,269,897 in cash to the United States treasury, April 29th.

The American Sugar Refining Company and eight of its individual officials and associates were indicted July 1 by the federal grand jury in New York, charged with being involved in the loan of \$1,250,000 made to Adolf Segal, of Philadelphia, which resulted, it is alleged, in the elimination of the latter's Pennsylvania Sugar Refining Company as a competitor of the Sugar Trust. The indictments charge a violation of the criminal clause of the Sherman anti-trust law making it a misdemeanor to engage in a conspiracy to restrain trade and commerce.

From July, 1911, much testimony was taken in New York, by a subcommittee of a Congressional committee appointed to investigate the American Sugar Refining Company, concerning the long war-

TRUST PROSECUTIONS

fare of the great sugar interests, and astounding revelations were made touching the secret manipulations of the trust.

Beef Trust Case.—In 1902 numerous Western shippers of cattle began to complain of various discriminations against them by large meat packers who they claimed had combined into an organization to monopolize the beef market. The complaints increased to such an extent during 1903 that in 1904 Judge Peter S. Grosscup, of the United States Circuit Court at Chicago, issued an injunction restraining the packers charged with having made the combination from either conspiring to depress the price of cattle or to raise the price of beef. In March of the latter year, Congress ordered an investigation of the packing concerns, and, while this was in progress, the federal grand jury at Chicago began an inquiry into the methods of the alleged trust, on the grounds of having violated the Sherman anti-trust law and also Judge Grosscup's injunction.

Commissioner Garfield, of the federal Bureau of Corporations, submitted a report of his investigation of six leading packing companies, showing that they purchased practically all of the cattle sold in the principal Western markets; that they supplied the bulk of the fresh meat sold east of Pittsburgh; and that they derived a great advantage and profit from the ownership of private cars. The question of a combination was not touched in this report, owing to the grand jury's investigation. On the findings of the latter the federal Department of Justice instituted suits against the packing companies complained of; in 1905 four officials of the companies pleaded guilty to soliciting and receiving rebates from railroads; and in 1906 Judge J. Otis Humphreys, of the United States District Court at Chicago, discharged the sixteen defendants, upholding the immunity pleas filed by the defendants as individuals and denying it as to the corporations; in other words, he directed the jury to render a verdict in favor of the defendants as to the individuals and in favor of the government as to the corporations.

Early in 1906 Upton Sinclair published, under the title of *The Jungle*, a description of conditions in "Packingtown"

(Chicago), and on reading it President Roosevelt sent special commissioners to investigate Sinclair's statements, which the commissioners reported as being fully sustained. While this verification was in progress, the United States Senate passed a Meat Inspection Act drafted by the Department of Agriculture, but the measure was opposed in the House till considerably amended, and when finally passed (approved June 30, 1906) it provided for a thorough inspection of meat products "from the hoof to the can," and that the government should pay the cost of the inspection.

In 1908 the government made known its intention to institute a further investigation of the packing companies, and, after two years of preparation, obtained an indictment in Chicago against the National Packing Company, and filed a bill in equity for its dissolution, as an organization operating in restraint of trade, both in March, 1910. In September following, criminal indictments were found against the leading packers in Chicago, who operated 721 branch plants, under a charge of "maintaining a combination and unlawful conspiracy in restraint of interstate commerce and a monopoly in cattle, sheep, and hogs, and in the sale of fresh meats."

On March 26, 1912, the jury found the defendants not guilty of violating the criminal section of the Sherman law. June 17, 1912, the National Packing Company announced a voluntary dissolution.

International Harvester Companies.—The International Harvester Company of New Jersey, incorporated at Trenton, Aug. 12, 1902, was a combination of the McCormick Harvesting Machine Company; the Warder, Bushwell & Glessner Company, the Deering Harvester Company, the Milwaukee Harvester Company, and the Piano Manufacturing Company. Subsequently it absorbed several other harvester concerns, among them the Aultman & Miller Buckeye Company and D. M. Osborne & Co. It was agreed at the time of organization that the voting trust was to run until Aug. 1, 1912, unless a majority of the trustees should agree to terminate it, which could not be done on less than ninety days' notice.

The company was capitalized at \$120,-

TRUST PROSECUTIONS

000,000, of which \$60,000,000 was paid in cash. The other \$60,000,000 of stock was issued for real estate, plants, and physical inventories. All the stock of the company, except eighteen shares, held by the directors, was deposited with the voting trust, of which George W. Perkins, Cyrus H. McCormick, and Charles Deering were the trustees.

The Harvester "trust" occupied the attention of the Department of Justice since 1906, when the Townsend report was filed. The next year papers were prepared by the government in a suit against the corporation, but this action was held in abeyance pending the outcome of proceedings brought in the Missouri Supreme Court on Nov. 11, 1907, by Herbert S. Hadley, the attorney-general of Missouri. That State sought to oust the Harvester company for alleged violation of its anti-trust laws. Among the allegations in the complaint was the charge that the International Harvester Company of America was maintained by the New Jersey company, the parent corporation, as a separate corporate entity for the sole purpose of making sales of all of the parent company's products, and that, with the object of preventing competition and giving the New Jersey company a monopoly of the business, the International Harvester Company of America compelled its retail dealers in each county of the State of Missouri to handle and sell only the products of the International Harvester Company.

On Nov. 14, 1911, the Supreme Court of Missouri fined the International Harvester Company of America \$50,000. Further, the court ruled that the fine must be paid on or before Jan. 1, 1912, and that if the company should prove to the court by March 1, 1912, that it had ceased all connection with the International Harvester Company of New Jersey, which the court held to be unlawful, the ouster of the International Harvester Company of America from the State of Missouri would be suspended. The fine was subsequently reduced to \$25,000, and in the following month a writ of error was granted, allowing an appeal to the United States Supreme Court to test the constitutionality of the Missouri law.

Meanwhile negotiations were begun between the parent Harvester company and

the federal Department of Justice, having in view a voluntary reorganization of the company in conformity with the law, and pending the result of conferences a dissolution suit threatened by the government was held in abeyance. On April 30, 1912, however, the government began suit against the company in the United States District Court at St. Paul, Minn., charging it with being a monopoly in restraint of trade and asking that it be dissolved. The petition named seven corporations and eighteen individuals as being the responsible heads of the corporation—viz.:

International Harvester Company, International Harvester Company of America, International Flax Twine Company, Wisconsin Steel Company, the Wisconsin Lumber Company, Illinois Northern Railway, the Chicago, West Pullman & Southern Railway Company, Cyrus H. McCormick, Charles Deering, James Deering, John J. Glessner, William H. Jones, Harold F. McCormick, Richard F. Howe, Edgar A. Bancroft, George F. Baker, William J. Louderback, Norman B. Ream, Charles Steele, John A. Chapman, Elbert H. Gary, Thomas D. Jones, John P. Wilson, William L. Saunders, and George W. Perkins.

President Cyrus H. McCormick, denying the government's charges, said:

"More than six years ago the company asked for its investigation by the United States government, and opened all its books and records for inspection, and furnished all information requested. No suggestion of any change in its business methods has been made to it by the government at any time. Recently a full and frank discussion of the whole situation has been had between the representatives of the government and the company in an honest desire on both sides to avoid litigation. Some plan may yet be found which will obviate the necessity of any protracted litigation by satisfying the claims made under the Sherman act without seriously impairing the economic advantages and benefits secured by the organization of this company. No form of reorganization, however, was suggested by the government that seemed practically possible."

Express Companies Inquiry.—On July 1, 1911, the Interstate Commerce Com-

TRUST PROSECUTIONS

mission issued an order directing a thorough investigation into the methods of doing business and the tariff charges of practically every large express company which is an interstate carrier in the United States. In its order the commission said that complaints had been made against the express companies that their rates, classifications, etc., are in violation of the Interstate Commerce Act. The inquiry was ordered "to determine whether such rates, classifications, regulations, or practices, or any of them, are unjust or unreasonable, or unjustly discriminatory, or unduly preferential or prejudicial, or otherwise in violation of any of the provisions of said act, and to determine the manner and method in which the business of said express companies and each of them is conducted."

The common carriers specifically named in order are the following: Adams Express Company, American Express Company, Borough Express Company, Boston & Worcester Despatch, Canadian Express Company, Canadian Northern Express Company, Dart & Co.'s Express, Davenport & Mason's Express, Dodds & Childs Express Company, Dunlap's Express Company, Earl & Prew's Express, Globe Express Company, Great Northern Express Company, Knickerbocker Express Company, Manhattan Delivery Company, Morris European and American Express Company, National Express Company, New England Despatch Company, New England Express Company, New York and Boston Despatch Express Company, Northern Express Company, Pacific Express Company, Southern Express Company, United States Express Company, Wells, Fargo & Company, Westcott Express Company, Western Express Company, together with the individuals doing business under these firm names, whether their names appear in the name of the company or not.

Immediately after the issue of the order nearly all the companies announced a reduction of tariff rates to take effect August 1st following.

Standard Oil Case.—On Nov. 15, 1906, the Attorney-General of the United States began proceedings against the Standard Oil Company of New Jersey under the Sherman Anti-Trust Act by filing in the United States Circuit Court in St. Louis

a petition in equity against the company and its seventy constituent corporations and partnerships and seven individual persons, asking that the combination be declared unlawful and in restraint of interstate trade. Frank B. Kellogg of St. Paul was appointed special prosecutor, assisted by Charles B. Morrison of Chicago, Frank H. Poole and J. H. Graves of the Department of Justice, W. H. Higgins of Minneapolis, and C. A. Severance of St. Paul. The defence was led by John G. Milburn of New York. The decision in the case was announced in St. Louis and St. Paul Nov. 20, 1909, the government winning a complete victory. In an opinion written by Judge Walter H. Sanborn of St. Paul and concurred in by Judges Van Deventer, Hook, and Adams, with a special concurring opinion by Judge Hook, the United States Circuit Court for the Eastern District of Missouri declared the Standard Oil Company of New Jersey an illegal combination, operating in restraint of trade, and ordered its dissolution within thirty days. The decree, unless suspended by an appeal to the United States Supreme Court, was to be followed by an injunction restraining the company from further continuance of its business under its existing formation. The gist of the decision is in the following excerpt from Judge Hook's concurring opinion:

"The principal conclusions, upon which we are all agreed, may be briefly stated as follows: A holding company—owning the stocks of other concerns whose commercial activities, if free and independent of a common control, would bring them into competition with each other—is a form of trust or combination prohibited by section 1 of the Sherman Anti-Trust Act.

"The Standard Oil Company of New Jersey is such a holding company. The defendants who are in the company are enjoined from continuing it and from forming another like it. The holding company is enjoined from exercising the rights of a stockholder in the subordinate companies, and they are enjoined from allowing it to do so or to benefit therefrom in the way of dividends.

"It is thought that with the end of the combination the monopoly will naturally disappear, but lest, instead of resulting that way, the monopoly so wrongfully

TRUST PROSECUTIONS

gained be perpetuated by the aggregation of the physical properties and instrumentalities by which it is maintained in the hands of a member of the combination and the liquidation and retirement from business of the other members, it is held that such a course would violate the decree."

From the decision of the United States Circuit Court in St. Louis, the Standard Oil Company appealed to the United States Supreme Court, where it was first argued in March, 1910, and for a second time, before the full court, in January, 1911.

On May 15 following, the decision of the court was announced, the opinion being prepared by Chief-Justice White.

The decree of the Circuit Court for the Eighth Circuit directing the dissolution of the Oil Trust was affirmed, with minor modifications in two particulars. So far as the judgment of the court was concerned the action was unanimous, but Justice Harlan dissented from the argument on which the judgment was based.

The two modifications of the decree of the Circuit Court were that the period for execution of the decree is extended from thirty days to six months, and the injunction against engaging in interstate commerce on petroleum and its products pending the execution of the decree was vacated. This latter modification is made distinctly in consideration of the serious injury to the public which might result from the absolute cessation of that business for such a time.

Broadly speaking, the Supreme Court determined against the Standard Oil Company on the ground that it was a combination in unreasonable restraint of interstate commerce. For the first time since it has been construing the Sherman Anti-trust Act the court took that position, and thus definitely read the word "unreasonable" into the law. It was on this ground that Justice Harlan dissented. This decision, therefore, is a practical reversal of the position taken by the court in the trans-Missouri case, one of the first cases under the Sherman law.

In that case Justice White joined with the late Justice Brewer in a dissenting opinion, while Justice Harlan was with the majority of the court. That decision held, as Justice Harlan held regarding the

Standard Oil Company, that the combination complained of was in restraint of interstate commerce and therefore under the inhibition of the statute. Justices White and Brewer then held that the combination complained of was an "unreasonable" restraint of commerce, and so brought itself under the ban of the law.

Justice Harlan sharply criticised the majority of the court for taking this position. He declared it to be a menace to the institutions of the country. He said it was amending the Constitution by judicial interpretation, and was unjustified. And he asserted that one of the greatest dangers to the country was the willingness of the courts to take such action.

In compliance with the decree of the Supreme Court, the Standard Oil Company of New Jersey, on Aug. 1st following, notified its 6,000 stockholders that they would receive their pro rata share of its holdings of the stocks of the thirty-three subsidiaries which were co-defendants in the government's suit.

The Waters-Pierce Oil Company, a subsidiary of the Standard Oil Company, which was convicted June 1, 1907, of having violated the Texas anti-trust law, paid a fine of \$1,808,753 to the State of Texas April 24, 1909.

On Aug. 27, 1906, ten indictments containing 6,428 counts were returned against the Standard Oil Company of Indiana by two federal grand juries in the United States District Court, Chicago, for alleged violations of the act approved Feb. 19, 1903, known as the Elkins rebate law. The charge was that the defendant's property was transported by the Chicago & Alton railway at rates less than those named in the carrier's tariff schedules, published and filed with the Interstate Commerce Commission as required by law. The offenses were alleged to have been committed during the period from Sept. 1, 1903, to March 1, 1905.

Judge Kenesaw M. Landis of the United States District Court at Chicago decided Jan. 3, 1907, adversely to the demurrer of the Standard Oil Company to the indictments. The indictment under which the trial began March 4 contained 1,903 counts, each charging the movement of a car of oil either from Whiting, Ind., to

TRUST PROSECUTIONS

East St. Louis, Ill., or from Chappell, Ind., to St. Louis, Mo. On the trial 441 counts were withdrawn from the consideration of the jury on grounds not going into the ultimate questions involved in the case. On 1,462 counts the verdict returned by the jury April 13 was "guilty." Aug. 3d Judge Landis pronounced judgment and sentenced the defendant company to pay a fine of \$29,240,000, the maximum penalty under the law.

July 22, 1908, the United States Circuit Court of Appeals, to which the Standard Oil Company of Indiana carried its case, ruled that the fine imposed was illegal. The principal reasons given for this decision were that the trial court abused its discretion in the post-trial investigation which was held after the conviction of the Standard Oil Company of Indiana and by measuring the amount of the fine by the ability of the parent corporation—the Standard Oil Company of New Jersey—to pay; that the trial court was in error in excluding evidence of knowledge and intent on the part of the defendant in the acceptance of rebates; that the trial court erred in the manner of computing the number of offences. The court remanded the case for a new trial.

The second trial began before Judge A. B. Anderson of the United States District Court, Feb. 23, 1909, and March 10 the Court ordered the jury to find the defendant company not guilty on the ground that the government had not proved its case in accordance with the law as construed by the Circuit Court of Appeals. The government had failed, declared the judge, to establish the very foundation of the charge against the Oil company in failing to prove that there was any established or fixed rate of 18 cents between Whiting, Ind., and St. Louis, Mo., a deviation from which was necessary to a violation of the Elkins Act.

Coal Trust.—A strike of anthracite-coal miners was settled in June, 1912, by the operators making various concessions, the chief of which was an advance in wages. Immediately after this settlement the operators announced an increase in the retail price of coal of twenty-five cents per ton, or ten cents per ton more than the increase in wages (ten cents per ton) and the estimated additional expense

(five cents per ton) would cost them, thus not only forcing the public to pay the additional cost, but also making a further profit. A resolution was introduced in the House of Representatives (May 29, 1912), as follows:

"Whereas, The increase in the benefit to the anthracite-coal miners is approximately \$5,000,000 under the recent compromise agreement, while the increase to the general consumers will approximate \$15,000,000.

"Therefore, Be it resolved, that the Secretary of Commerce and Labor be and he is hereby directed to obtain and report to the House of Representatives, through the Bureau of Labor, full information concerning the different elements of cost and profit included in the present high prices of anthracite coal."

Another governmental probing step was taken on June 18, 1912, when the Interstate Commerce Commission instituted proceedings against 214 railroad companies, the investigation involving not only freight rates, but, indirectly, the entire schedule of coal prices and methods of production and distribution; indicating that this investigation would be followed by orders demanding needed reforms and the abolition of unjust practices by the railroads constituting the monopoly.

On June 21, 1912, the Interstate Commerce Commission rendered an initial decision against the trust on the complaint of the Marion Coal Company against the Delaware, Lackawanna, and Western Railroad Company, holding that present rates of transportation were excessive and unreasonable, and ordering the railroad company to put into effect before Aug. 15 a reasonable schedule, the order directing a substantial decrease from existing rates.

Authors of the Sherman Law.—Senator John Sherman was not the author of the famous *Sherman Anti-Trust Law*. He introduced a bill, of which only the enacting clause, as first drawn, was retained by the Congress. On July 21, 1912, Mr. Albert H. Walker, a distinguished lawyer of New York and author of *The History of the Sherman Law*, addressed the following communication to Senator Moses E. Clapp:

In pursuance of your request, I submit the following report of the results of my

THE TRUST QUESTION

investigations in the office of the secretary of the Senate and in the room of the Senate Judiciary Committee, relevant to the authorship of the Sherman law of July 2, 1890.

That statute was drawn in the Judiciary Committee in the latter part of March and the first part of April, 1890. It was based on the bill which Senator Sherman introduced as Senate bill 1 early in December, 1889, but Senator Sherman took no part in framing the substitute, which was drawn by the Judiciary Committee. That committee was composed of Senators Edmunds, Ingalls, Hoar, Wilson of Iowa, Evarts, Coke, Vest, George, and Pugh. All of its members participated in the consideration of the framing of the statute as it was re-

ported by the committee, which is the exact form in which it was enacted and approved by President Harrison.

The eight sections of the statute were written by the following Senators in the following proportions:

Senator Edmunds wrote all of Sections 1, 2, 3, 5, and 6, except seven words in Section 1, which seven words were written by Senator Evarts. Those are the words, "in the form of trust or otherwise."

Senator George wrote all of Section 4. Senator Hoar wrote all of Section 7, and Senator Ingalls was the author of Section 8.

ALBERT H. WALKER.

For a more detailed account see *SHERMAN ANTI-TRUST LAW*.

THE TRUST QUESTION

The author of the following article, Judge Peter S. Grosscup, was born in Ashland, Ohio, in 1852 and educated in Wittenberg College and the Boston Law School. For a number of years he practised law in his native town and in Chicago. In 1892 he was appointed United States judge for the Northern District of Illinois and in 1899 judge of the United States Circuit Court of Appeals. His resignation from this office took effect on October 23, 1911. During his occupancy of the bench Judge Grosscup has rendered decisions in various important cases which have attracted the widest attention.

The Trust Question.—Is there common ground on which thoughtful men can meet on the trust question? By "thoughtful men" I do not mean the few men who have utilized our corporation policy to amass unexampled fortunes or build up unexampled power; they would not voluntarily surrender anything that would limit their power. Nor do I mean the political leadership that looks only and always for what is *obviously* popular; that leadership can only be enlisted in a cause that has shown itself to be obviously popular. What I mean by "thoughtful men" are the men in what is called the "business" world who are unallied with the trusts, except as unwise attacks on the trusts

spell danger to business generally; and the intelligent masses, outside the "business" world, who, without expectation of political advantage personally out of attacks upon the trusts, yet oppose them.

These two classes together make up the jury that decides the issue, whenever a real issue in this country is once made up and presented. And by "common ground" I mean the ground that men come to occupy when, escaping mere self-interest, on the one hand, and mere self-ambition, on the other, they get down to the concrete right and wrong of the thing involved; as, for instance, the ground taken by the Republican party in 1856 and 1860 on the slavery question, after a score of years had been spent in merely manœuvring for a sectional or party advantage. Can these men in the business world, unallied with the trusts except in a common fear, and these men among the masses, unallied with the trust question as a mere football in politics, be brought to a common ground with relation to the trusts? If they can, it will be within their power to settle the trust question without any considerable peril to business; and to settle it so it will stay settled by settling it right.

Just now our more active politicians are demanding that "big business be eliminated from politics"; and to that

THE TRUST QUESTION

and a number of "means" are put promiscuously forward—the popular election of United States Senators, initiative and referendum, popular primaries, and the like. But will any of these, or all together, even if carried out, change big business from just what it is now, or where it is now, with its own peculiar access to politics, except perhaps that the field of operation would be changed and the procedure modified? The philosophy that underlies this demand is, that enterprise known day is necessarily and inevitably the enemy of popular rights, against which every barrier known to political science must be raised—a philosophy that runs directly to its object, only in the old story of the Sherman Act when that act was regarded as a means of putting big enterprise not only out of politics, but out of business also. Is the philosopher sound? Pursued logically to its purpose, that philosophy means that this day of big things must be brought to an end either for big things cannot be done except in big ways. Not so pushed to its logical end—left in the air as a mere wishman—it means that big business, whatever may be the immediate effect of these movements, will soon again attain full influence in politics and its full swing in the business world, for any policy, political or economic, which cannot be carried out without general inquiry cannot be kept dangling in the air.

Let us see, then, if there is not common ground, not least upon the common philosophy, on which the disinterested ownership of the country can stand. There are others, in large questions, it is the few dominating facts that need to be considered. The other facts are merely accessories. Upon the first of these dominating facts I think we can agree: That the seat of our political power, and the source of our present political and economic uncertainty, is the presence among us of phenomena never seen until within the lifetime of the youngest of our voters—the industrial power of this country in the hands, apparently, of a few men, who have amassed out of it individual fortunes never before dreamed of. I speak not only of the phenomena; what is its place in the world of cause and effect as

a matter of fact it is both cause and effect—is another matter. But even as phenomena it cannot be fully understood until the economic instrumentality and machinery through which "cause" is transformed into "effect" is more clearly understood. To bring out this economic instrumentality let me use a couple of similes.

Moisture is the water in the air that the atmosphere has gathered from the seas and "saved," so to speak, for the time being, from going into the earth or back into the seas. What the individual men and women of our ninety millions are able to lay aside yearly from their income, after a living has been derived, may be compared to this moisture stored away day after day from the earth; and what is done in the way of deposit and investment with these gathered savings of the people may be compared with the precipitation back to earth of this moisture in the form of rain.

This gathering of the surplus financial resources is universal—as universal as the gathering of moisture in the air: is taking place in the remote farms and villages as well as in the cities, among the people in the ordinary walks of life as well as among those whom we call successful. And the precipitation back to earth in the form of bank deposits and personal investments is equally universal, both as to place and as to people. Now some of this precipitation, like the rain, remains where it falls, absorbed in local investments or in the nurture of local enterprise. But a larger part, like the rain again, runs off in the form of bank deposits, first into the smaller rivulets of the local banks, then into the larger streams of the neighboring city banks, and then again into the rivers that empty into the country's great financial reservoirs. The accumulations in New York, Chicago, Boston, Philadelphia, and other financial centres are chiefly what the rivers brought down from the creeks, what the creeks brought down from the rivulets, what the ten thousand rivulets gathered up from every countryside. These surplus savings of the country represent more than fourteen billions of dollars, or nearly one-seventh of the country's entire wealth, and would re-

THE TRUST QUESTION

build and equip the greatest portion of the country's railroad system, including terminals. All this is in a state of flux. "Lift thou up thy rod and stretch out thine hand over the sea" was the command given to Moses from which power over the waters issued. There are a few private offices, apparently, that hold the men who exclusively possess this power over the financial waters that make up the country's financial resources.

Or, to change the simile. A great part of the country's business activity—that part that pretty accurately measures the difference between what we call prosperous times and hard times—may be represented as a huge motor-car driven by the pent-up energies that these enormous bank deposits, as an entirety, contain. Let the deposits be withheld from the business man or manufacturer, or the rate made so high that he cannot afford to borrow, the business man cuts down his stock and the manufacturer his output, and with this men are thrown out of employment or wages cut down. Let them be withheld from the railroad company, or the rate made so high that the railroad cannot afford to borrow; extensions are stopped, improvements are stopped, orders for new equipment are withdrawn, and with this, too, men are thrown out of employment or wages cut down. Let them be withheld from the broker, or the rate substantially increased; there are no resources with which to buy stocks, the pressure to sell increases, and the whole speculative list goes down with a thud. But let these deposits be made easy to borrow; business and manufacture take on renewed activity, the railroads renew their projects, the speculative list goes up with a bound. This fourteen billions of wealth in flux is the gasoline that, fed freely or fed gingerly into the engine, increases or diminishes its power, running it up at times to the highest speed or lowering it to a complete standstill. And, under existing policies, it is these few men, to the exclusion of all others, who have their hands on the gasoline lever and their feet on the accelerator. Were the *individual* possessions of the richest men living to be destroyed, they would not be missed much beyond the day of their destruction. It is the savings of

the people in the ordinary walks of life that the great so-called national "money power" utilizes. It is on this capital of the people, but under the power of this so-called "money power," that the great enterprises of to-day rest. This is the first dominating fact in the industrial problem.

The second dominating fact, just as much a proposition of *fact* as the first, and just as essential to a complete and intelligent comprehension of the trust problem, I think we can agree upon also—viz., that like the world's great literature, paintings, marbles, hospitals, schools, libraries, and benevolences of every kind, industrial enterprise of every kind, even when in the form of "concentration," has its origin in the *brains* of men—children of the *brain* put into material form and substance—every successful enterprise, whether it be a farm or a gigantic trust, the "thought" of some man or group of men "materialized." And because, in individual enterprise, the "thing" visible would not have been but for the "thought" invisible—the possession outside emerging from the brain inside—the possession outside morally and legally belongs to him whose brain gave it birth and subsequently nurtured it. On that rests the right of individual property. The possession is the man's because the thought was his. On that foundation, except with those who see no individual right even in "thought," the right of property is fundamental. Those who ignore this, dwelling wholly on the fact that in modern industry power has actually gone into the hands of the few, have only a half view of what is involved in the trust problem. On the other hand, those who ignore the fact that in modern industry, power and the newly created property of the country have been going, with tremendous disproportion, into the hands of the few, dwelling wholly upon the part that "thought" plays in successful enterprises, have only a half view also of what is involved in the problem. A whole view must include both of these facts. The "common ground" must include both of these essential factors in the problem.

But there is another factor in the problem about which there is still some dis-

THE TRUST QUESTION

pute as to whether it is a fact or not—namely, the economic value *to the public* of concentration in industry, even to the partial displacement of competition, and, in consequence, the existence of a *motive* on the part of those who go into “concert” or “combination” not founded on mere purpose to destroy others. That there can be no motive for combination other than such purpose has been the accepted economic fact thus far; and, as such accepted economic fact, has been the basis of all the decisions and all the laws that hold that any combination in trade is unlawful *merely because it is a combination*. But is that the real economic fact now? President Taft’s view seems to be that if the rule of universal competition was good enough for the past it ought to be good enough for the present and future. But is that true? Is not that essentially Toryism—a determined will *not* to move forward with the times—as Mr. Roosevelt comes very near calling it? Can we go back to the rule of universal competition? Not, certainly, in those activities that relate to public utilities. The necessity, not only of concentration, but of monopoly in this field is already accepted. Must we not accept it also to some extent in the industrial field? Can we take apart the Standard Oil enterprise, the United States Steel enterprise, a dozen other enterprises, and expect the separated parts to work as well as when working in close co-ordination; for competition is the absence of co-ordination? Here is the crux of the debate. Here is the point on which we need a disinterested but thorough economic education, such as we received on the currency question and the gold standard in 1896; for until the public mind advances on this question, as it did in 1896 on the currency question to the position to which economic *conditions* have already advanced, the political thought of the country will be in no *mental attitude* to comprehend the great problem that is calling for solution.

The primary motive in industry is, of course, to make more money and acquire more power. But this is accompanied generally by a desire to be within the law. Now suppose to a group of such men, contemplating concentration but de-

siring to be within the law, the law should say: The law recognizes what is now the economic fact, that through the greater efficiency produced by co-ordination profits may appear at prices to the public that, under conditions of competition, would mean losses; and what the law thus recognizes it will not prohibit, provided you confine yourselves to what thus comes to you through the superior economic efficiency of co-ordination—the normal productive advantage of concentration, as the chief justice in the Standard Oil case seemed to indicate, as distinguished from use of the mere *power* thus acquired to eliminate competition or artificially exploit the public—suppose the law should say this and then *enforce the provisos*, would not that bring the country politically to the position it has already reached economically? Indeed, is it not necessary that the law should say this, in order that we may fulfil the economic mission of the times and keep up against the competition of the rest of the world, where the law already recognizes what has taken place in economic development?

Now, when we come to think about it, is it not right along this line, each side taking only his half view of the problem—the one dropping out of consideration altogether the value of concentration as an economic fact, and the other dropping out of consideration the danger to the public of the power thus acquired—that the two sides separate from each other in their *moral* view of the trust problem? “Is not the right to create big enterprise *open alike to all*?” ask the men in the business world. And from that there seems to be no break in the logic to the next question: “Is not the *corporate machinery*, through which such enterprise alone can be created, *open alike to all also*?” “Why, then, should not that right, the right to the corporate machinery,” they continue, “like natural individual right, be exempt from government interference, either by way of limitation or condition?” And the appeal would, I admit, be a convincing one if there were no difference between “natural” right in connection with enterprise incorporated and “natural” right in connection with individual enterprise.

THE TRUST QUESTION

But there is a difference, a fundamental difference. I am now dealing with the view—the half view—taken by the business world. Individual enterprise is the “man” in action, aided by government only in so far as government protects him, along with other men, against the unfair interference of other men. The trust, or corporation, is men “banded together” in action, not only protected by government against the unfair interference of others, but affirmatively authorized by government to *band together*. In individual enterprise it is the man who is the unit—the capacity of a single man to monopolize, the only danger of monopoly. In the trust or corporation the unit becomes unbounded—the trust is an industrial empire within the governmental empire. In individual enterprise the man sooner or later dies, and what he has accumulated is distributed; the limitation laid on entails from our earliest colonial days sees to it that no individual accumulations shall go on longer accumulating; on the other hand, the trust or corporation is perpetual—there is no limit to the ball it may roll up. Except in the case of a patent under our patent law, no single individual has ever been able to throw off competition; it is beyond a single individual's capacity to throw off competition—singly and alone he is too small a factor in the whole community; and patents are limited in duration, and still more limited in the scope of things covered. But it is easily within the capacity of the trust and corporation, when given practically unrestricted freedom, to throw off competition—a capacity granted by the government, too, *in the power to incorporate*, just as distinctively as a patent is granted, but with this advantage over a patent, that it is without limit in duration, and without limit, too, in the scope of things covered. Between “man” as a unit and “men banded together” under the authority of the government as a unit, in corporate entity, there is then a fundamental difference.

But those on the other side of the line—those who see nothing in the trust and corporation save the machinery through which exaction is exercised and unprecedented personal fortunes built up—are,

I think, unduly under the influence of a shibboleth just as inapplicable to the trust problem as the one just discussed—the shibboleth that big enterprise, *always and necessarily*, is odious.

No one represents this type so well, perhaps, as Mr. Bryan. Is theft to be punished only when it is “unreasonable,” he inquires (discussing the recent decisions of the Supreme Court in the Standard Oil and Tobacco cases), or assault and battery, or burglary, or murder? Between the offences denounced in the Decalogue, on the one hand, and big enterprise, on the other—between the offences that have been always and inherently wrong, and these phenomena arising naturally in the course of modern industry—Mr. Bryan sees no distinction. And this in the face of the fact that “monopoly” even is not *necessarily* wrong—that our patent and copyright laws recognize it as something not only right, but advantageous to society; and in the face of the fact also that it is not “combination,” standing alone, that the Sherman law makes a crime, but only “combinations in restraint of trade.” If I lay my hand on my neighbor's cheek, it may be assault and battery and it may not, accordingly as it is calculated to hurt him physically and in feelings or is not calculated to so hurt. The laying of the hand on the cheek, considered alone, is not the offence—the hurt, or absence of hurt, to body or feelings determines its character as an offence. And so with “monopoly” and “combination” the test should be, not solely is the given enterprise a monopoly or a combination, but, being such, *does it hurt society?*

There are many monopolies that confessedly do not—the railroads, the telephone and telegraph service, and the electric-light service—these, properly conducted, are helpful—helpful from the fact of being monopolies. And many combinations are really helpful—helpful, too, from the fact that they are combinations. Suppose it should turn out, for illustration, that in the transformation from the hoof to the meat market—from the farmer's pasture to the consumer—the packers took, for their service, one-fourth of one cent per pound only, while under the old individual system of

THE TRUST QUESTION

butchering, or under a system not "concentrated," the same service would have cost five cents per pound (or under the old system the service of the butcher cost five dollars a head while in the new only one dollar and a half a head was taken out), would Mr. Bryan say that the concentrated system should, none the less, be dealt with as "criminal"? And suppose it should turn out, too, that in the absence of "concert" this low cost of manufacture could not be maintained, is our adherence to the old shibboleth, "Concert or combination is odious," so unbending that the farmer or consumer, one of the other or both, must maintain that shibboleth even at the price of paying three or four times more as the cost of manufacture of the meat sold and consumed? For the increased cost involved would fall on some one. "Oh," but Mr. Bryan says, "what becomes of the individual butcher?" What has become, I ask, of the old stage-driver whom the railroad displaced; or the old farm-hand who cradled the wheat, whom the harvester displaced; or the old artisan whom machinery has displaced? *All occupied at better wages and shorter hours under the new system, is the answer.* The question is: Is the change helpful to the whole public; for what helps the whole public will help, eventually, even those displaced in the readjustment made. I do not speak for the packers in this article. I do not say they can make the showing. The point I make is: Shall that which would not be hurtful but helpful be made, as a matter of law, "criminal," not because it is hurtful but because it is industry "in combination"—shall there be no distinction between the helpful and the hurtful, provided either is the product of concert or combination?

Now the first thing needed, it seems to me, to reach "common ground," is that both these half views be laid aside. The preconception, amounting almost to a moral axiom, that rules the mind of the business world, even that portion of it unallied with the trusts, is that restraint on what men may do, banded together in a corporate entity, is the same as restraint on individual freedom in industry, and therefore is against "natural right." This preconception eliminated, the busi-

ness world, at least that portion unallied with the trusts, would be in a position to consider the trust problem from the broader view of what is *evil* in combination as well as what is good. The preconception that rules the minds of the men opposed to the trusts, amounting almost to a moral axiom, is that the mere "banding together," apart from whether the effect is helpful or hurtful, when it assumes large proportions, is something against "natural right." That preconception eliminated, men opposed to the trusts would be in a position to consider the trust problem from the broader view of what is *good* in combination as well as what is evil. The difference seems to be largely a difference of moral view; and the first step toward "common ground" is for each to perceive that *its own* preconception of what is "natural right," as well as that of the *other*, is incorrect—that to include, on the one hand, the government-given right to incorporate, among the *natural rights*, or to include, on the other hand, every form of business concentration as *violative* of natural right, is, in each case, to shut one's eyes to the real origin, the real significance, and the real mission of co-operative enterprise in the modern world.

But the whole question does, in the end, turn largely on "moral right." Our people as a whole are prosperous. Industry as a whole is, from a purely economic point of view, pretty soundly organized. The one trouble with our prosperity as a whole viewed from the standpoint of the business man, is that it is overhung with a thunder-cloud out of which may come, at any moment, the bolt that will destroy. Legitimate business does not know what its legitimate boundaries are. And the one trouble with our prosperity as a whole, viewed from the standpoint of the masses, is that it is disproportionately distributed—that a certain class get out of it much more than their just proportion. Both of these views involve "moral right." For it is the moral right of the business man who wishes to be law-abiding that he know *in advance* what the law is. An ancient tyrant purposely wrote his laws on the public tablets so high up that no one could make out their meaning. That

THE TRUST QUESTION

they were on the tablets fulfilled the letter of his obligation; that they could not be made out fulfilled his thirst for cruelty. History has execrated him. The business man has the moral right to legible laws. But the business man is not the only one entitled to a moral right in this matter. Every man among the masses has an equal moral right—the right that he, *individually*, shall not be dropped out of his country's prosperity. For while the people have no moral right to impose on the business world illegible laws, the business world has no moral right to a scheme of things under which is taken to itself all that is left, after the masses have obtained their bread and shelter. *It is not by bread alone that men live.*

Can organization in industry, including the right of "concert," and in some cases of "monopoly," be brought to a condition where what is within the "man" will be given room to be worked out by him, both for his own benefit and the benefit of mankind, without giving him a premium so exorbitant as to be unjust? That is the problem of the day. In every other field—the mechanical arts, agriculture, literature, the professions—men are given full room and freedom without this exorbitant premium. Industry, individually carried on, gives full room and freedom without this premium. Cannot enterprise incorporated—enterprise given the right of concert and combination—be so conditioned? This, I sincerely believe, is the real new constructive work given this generation to do.

In some respects this work given us to do is greater and more difficult than even the one the founders of our government were given to do. There, as here, the main purpose was "liberty"—individual men left as free as possible from interference, to do the best that was within them. But there, too, as here, was this basic fact: that in many aspects of society men acting individually cannot do the best that is within them; that in some aspects of society men must act in mass; that there are some ends that can be successfully attained only by welding the strength of each and all into the strength of one. With the founders of our government the problem was on the political side of society; and the thing

they had to do was to devise those units of political power that, consistent with this liberty to the "man" to go on doing the best that was within him, would *unite* the strength of men, just when and where strength united would best subserve these purposes. What the founders thus accomplished is the political constitution under which we live.

The thing we have to do is to devise units of industrial power that, consistent with liberty to the "man" to go on doing the best that is within him, will unite the strength of men, just when and where united strength in these new times is the instrumentality needed.

What form shall our work take? No one man can adequately design a work so comprehensive and intricate. But I can, I think, make some intelligent suggestion to the work.

First, then, is the question: How can liberty be secured to the "man," to do the best that is within him, where the man must work through the agency of some great industrial concentration, in many new fields now the only available big way to do the necessary big things; that is to say, *how is modern legitimate business to obtain the atmosphere of liberty?* The one restraint on that liberty now is the Sherman Anti-Trust Act and the State anti-trust acts. Within certain limits these acts are essential and should be maintained. But they need this cardinal amendment, it seems to me: that *prohibited* restraint of trade should be defined to be only those transactions that, keeping in mind the necessity for big things being done in a big way, bring about as *actual results*—not merely potentially, but in fact—hurt rather than help to the public.

The decision of the Supreme Court of Missouri in the International Harvester case illustrates what I mean. The court in that case flatly finds that the "combination" had not, considering the rise of prices generally, raised the price of their machines to the farmer; that the combination had not resulted in the sale of deteriorated machines; had not, in the important particular of current repairs, injured the situation of the farmer—rather had helped it; and in the absence of exercising its power wantonly, it could

THE TRUST QUESTION

only keep out competitors by the superior efficiency of the combination as a going business concern. But none the less the decree went against the "combination," because through the combination thus effected the company had acquired *power*—potentially as distinguished from actual outcome—to do one or all of these hurts.

This was an interpretation of the Missouri statute. It accepted, without question, the old view that because there was then no economic value to the public in industrial concentration, the sole motive of combination *must* be purpose to raise prices and exclude others—ignoring altogether the economic value to the public of concentration as the fact exists to-day. The Sherman Act ought not, and will not, I really believe, be so interpreted when the Supreme Court of the United States once has that question *squarely presented*. An agreement that fifty years ago could have had no motive other than self-aggrandizement, and, therefore, no foreseeable result other than something harmful to the public, may, under the conditions of to-day, be based on the best of economic motives, bringing results not harmful but helpful to the public; hence, *not* "restraint of trade" *now*, whatever it may have been *then*. Indeed, an analysis of the long line of cases on this subject will show, I believe, that in none of the *early* English and American cases was there the absence of this element of *actual hurt* to somebody—not the mere *power* to hurt, but the hurt itself, or the intent to so hurt—a suggestion powerfully reinforced by the fact that at one time the English Parliament did undertake to make unlawful the mere "engrossment" of trade, whether its actual result was hurtful or not; but after a short experience repealed the act. But lest the Supreme Court should not interpret the Sherman Act, as it now stands, in the light of this comparatively new economic fact, Congress should by amendment put it plainly into the act.

But how can this liberty to the man to do the best that is within him—liberty to legitimate business to have the atmosphere in which alone it can succeed—be secured, even though the Sherman Act is thus interpreted or amended? How can the Sherman Act thus interpreted

and amended be made *workable*, so ^{*}as not to continue to subject business to the uncertainties of the law, on the one hand, or give it license to exploit the public, on the other?

A large part of the industry of the country is carried on by corporations or persons that are still in strict competition with one another, but who meet steadily or occasionally to confer respecting trade conditions, output, prices, and the like. This is "concert" or "conference" as distinguished from formal "combination," but none the less subjects those who participate to the consequences of the Sherman Act, where the "concert" or "conference" amounts to "agreement," quite as effectually as if the participants were in formal combination. I would amend the Sherman Act to permit such concert or conference, provided it is wholly through associations, nationally incorporated, and all that is agreed upon or done in such association is first submitted to the supervision and veto of the bureau, commission, or department of corporations. This would mean that prices *resulting from* concert would have to have the approval of the bureau or commission similarly as in Germany now. In that way ~~these~~ concerns would be informed *in advance* what in the way of concert would be permitted and what would not. And if they chose to proceed without obtaining such information in advance, or chose to go beyond the limits of the information obtained, there would be no longer any injustice, nor any uncertainty, in enforcing rigidly the penalties of the act.

In the case of corporations that have become so powerful in their field of industry that they dominate what prices shall be charged and what competition shall be permitted, I would either restrict them to such dividends as, all things considered, represent a fair return on the actual value of what they have put into their enterprise, or put their operations under the eye of the bureau, commission, or department, with power, subject to change as conditions changed, to fix the *maximum* of prices, in which case, to the extent that the conditions imposed by the bureau, commission, or department had been observed, the Sherman Act should

THE TRUST QUESTION

not be applied. In other words, keep these smaller concerns that resort to "concert" of action, and these bigger formal combinations, if restriction on dividends is not the better method (and I greatly doubt if it is, at the present time, at least), within the boundaries of what is the inherent and normal *business advantage* of concentration, as distinguished from what concentration may do, both in the matter of prices and in the matter of eliminating competition, through the mere *wanton power* of size and dominancy; for here, again, there would be the just element of information *in advance*, beyond which they could not go unless they chose to take their chances under the Sherman Act.

Of course this bureau, commission, or department of government will be human. Providence has no greater kind of man to lend us; and if it had, we would not, perhaps, accept him. There is, indeed, no working machinery in this world, social, political, or economic, that is purely automatic. In all, somewhere in the chain of forces at work, the human link will be found. But experience has shown that these public commissions the country over have, on the whole, proven just and practical. This is a fact the corporations themselves are just beginning to realize. No better testimony to this fact could be given than what was said by Mr. Cravath recently of the New York Public Service Commission. Besides; there is no alternative except the alternative of leaving it to the combinations themselves; and the combinations are human also. And then, as a directive and educational influence—an influence that in the long run would lay down the lines for the bureau, commission, or department, as the sailor's chart in the long run determines the course of the ship regardless of temporary departures out of the way—there would be the right of review by the courts, in the deliberate methods followed by the courts.

I have spoken of the unexampled individual fortunes that have been taken out of corporate concentration in industry, by a few men, within a period so quickly come and gone that to the most of us we cannot realize that it has come and gone at all. The tree from which these for-

tunes have been picked is that almost universal turn, within this period, of the inventive human mind to the powers laid away in nature for the uses of mankind; and the sinews that enabled these men, from among all other men, to pick these fortunes for themselves was their almost exclusive hold upon the workable capital of the country, utilized through their almost exclusive hold upon the corporate channels of industry.

More than all other causes combined this phenomenon is at the bottom of our social disturbance. It is the worm in the core of what would otherwise be a fairly sound apple. It cannot now, to the extent that it has been done, be undone. In a measure our past public neglect of the corporation as an essential instrument in industry has been the cause. But none the less it is a phase of these new times that was not, and is not, and cannot be right. And whatever of the past must remain, its recurrence must be provided against for the future; and, thus provided against, the whole phase would soon pass out of sight in the ever-changing conditions of wealth in industry.

I do not mean by this that the people of this country do not wish success to continue to be rewarded; nor do I mean that our people believe that one talent should draw the same as ten; nor do they fail to perceive that with the *useful* rich man, it is through individual acquirement that he has enabled himself to become useful. What I mean is, that the day of power to so manipulate the "corporation" that, as a form of wielding capital, it may, in the hands of those who so choose, become a deceit and a snare, while still remaining the reservoir into which the bulk of the workable capital of the country pours, must come to an end.

But how begin this process? Lead off, my answer is, by the national incorporation of every enterprise the bulk of whose raw material is drawn from States other than the company's domicile and the bulk of whose finished product is sold in States other than the company's domicile, thereby bringing their business into interstate commerce. Then construct this national corporation on lines, respecting capitalization, the payment of dividends only when

THE TRUST QUESTION—TRUXTUN

earned, simplicity in arrangement of securities, and the like, that as a "form of holding property" the corporation will have become a real trust, in the old sense of that word "trust," for the benefit and security of its stockholders.

Upon this feature of our new industrial constitution too much emphasis cannot be laid. In it resides the real seat of our future salvation. From the commission headed by President Hadley of Yale I had hoped much. Perhaps they went as far as their authority warranted. But the result is disappointing. In the anxiety of this commission not to give rise to any popular expectation that because the corporation is made by the State or nation a fit instrument to hold and wield capital it will be thereby guaranteed to be in every instance a successful industrial enterprise, they declined to take any effectual step to make it even a fit instrument. Their vision, to my mind, is confined too narrowly to the corporation and corporation securities as a mere tool or implement in the hands of industry as a whole. The corporation as a "form of holding property" ought to be much more than that—should be treated on much broader lines than that—nothing less than a real institution of government in the successful performance of whose mission lies much of the prospect of our people continuing to be for the future, man for man, a property-acquiring people. Every year the justice of the practice of dividing profits with those who help to make them is more and more recognized and acted upon by business concerns. What the future corporate policy should look to is to see to it that, in addition to the growing investable capital of the country, these periodically divided profits find channels also through which, instead of being eaten up as they are divided, they will become the foundation of permanent individual stakes in the country's property—will give to those to whom the profits come not only the consciousness that they have helped create prosperity, but the enjoyment also, the encouragement, and the incentive to a contented citizenship that is contained in the consciousness of receiving and holding one's just share in the property created.

These, then, are the general lines on which to place, it seems to me, the industrial side of society—activity that is *helpful*, given liberty to do the best that is in it to do, whether the brain behind it works individually or is required by economic development to work through forms of concentration; *hurtful* activity restrained; the judge of what is *hurtful* and what *helpful*, so far as it is essential that judgment *in advance*, from day to day, be rendered, an agency of the people; the courts of the country left with power to render such judgment where business chooses to accept uncertainties and delays rather than have these judgments in advance; and, finally, but even of greater moment, the ever-growing corporate domain practically, as well as in theory, opened up to the people, to the extent that a vigilant government can make a domain safe by making the forms of holding property within it secure.

At long intervals a case is tried in the court of public opinion, in which every one—business man, farmer, clerk, and workman—is a party in interest. This trust problem presents just such a case. Reduced to a simple issue it is this: Is there a place, politically and humanly, in this new age for what the age industrially has developed, or is industry and the law of the land always to so go on that neither can move without injury to the other? Is it not time that the trial on its merits should open—that there should be a campaign of education on a higher plane than mere partisan advantage—conducted to prove the economic value to the public of co-operation in industry, *properly safeguarded*, as the campaign of 1896 proved the economic value to the public of the gold standard?

Truxton, THOMAS, naval officer; born in Jamaica, L. I., Feb. 17, 1755; went to sea when he was twelve years of age, and for a short time was impressed on board a British man-of-war. Lieutenant of the privateer *Congress* in 1776, he brought one of her prizes to New Bedford; and in June, 1777, commanding the *Independence*, owned by himself and ISAAC SEARS (*q. v.*), he captured three valuable prizes off the Azores. Truxton performed other brave exploits during the Revolutionary War, and was afterwards extensively engaged in

the East India trade in Philadelphia. In 1794 he was appointed captain of the new frigate *Constellation*, and in 1798-99 he made two notable captures of French vessels of superior size—*L'Insurgente*, of forty guns and 409 men, and *La Vengeance*, of fifty-four guns and 400 men. The former was a famous frigate, and the engagement with her, which lasted one hour and a quarter, was very severe. *L'Insurgente* lost seventy men killed and wounded, the *Constellation* only three men wounded. The action with *La Vengeance* was equally severe. The vessels were fought at pistol-shot distance, the engagement lasting till 1 A.M. *La Vengeance*, much crippled, escaped before daylight, and Truxton lost his prize. This second victory gave him great popularity, and Congress voted him the thanks of the nation and a gold medal. These victories, at that critical time, made the navy very popular, and "The Navy" became a popular toast at all banquets. Pictures of naval battles and naval songs filled the shop-windows, and some earthen pitchers, of different sizes, were made in Liverpool for an American crockery merchant in

modore on the Guadeloupe Station, with ten sail under his command at one time. In 1802 he was appointed to command an expedition against Tripoli, was denied a

TRUXTON'S GRAVE.

captain for his flag-ship, and declined the appointment. His protest was treated as a resignation, and he was allowed to leave the service. In 1816-19 he was high-sheriff of Philadelphia. He died in Philadelphia, May 5, 1822. His remains were buried in Christ Church-yard, in that city, and his grave is marked by an upright slab of white marble.

Tryon, WILLIAM, royal governor; born in Ireland about 1725; became an officer in the British army, and married Miss Wake, a beautiful and accomplished kinswoman of the Earl of Hillsborough, the secretary of state for the colonies. Through him Tryon procured the office of lieutenant-governor of North Carolina in 1764, and on the death of Governor Dobbs, in 1765, he was appointed governor. He was fond of ostentatious display, and built a palace at Newberne at an expense to the colony of \$25,000. To gain this appropriation, Lady Tryon and her beautiful sister, Esther Wake, gave brilliant balls and dinner-parties to the members of the legislature, and used every blandishment

NAVAL PITCHER.

commemoration of the American navy. The engraving shows the appearance of one of these. In 1801 Truxton was transferred to the *President*, and was com-

TUCKER

they possessed. The taxes on account of this palace added greatly to the burdens of the people, and brought about the "Regulator" movement in the western counties. The history of Tryon's administration in North Carolina is a record of folly, extortion, and crime, and he gained the name of "The Wolf of North Carolina." He was governor of New York when the Revolutionary War broke out, and he was the last governor of that province appointed by the crown. Compelled to take refuge from the Sons of Liberty on board a vessel in New York Harbor, it proved to be a permanent abdication. He entered the British military service, and engaged in several disreputable marauding expeditions. His property in North Carolina was confiscated. He went to England in 1780, and became lieutenant-general in 1782. He died in London, England, Feb. 27, 1788.

Tucker, GEORGE, author; born in Bermuda in 1775; graduated at William and Mary College in 1797; admitted to the bar and practised in Lynchburg; elected to Congress in 1819, 1821, and 1823; Professor of Moral Philosophy and Political Economy at the University of Virginia for twenty years. His publications include *Letters on the Conspiracy of Slaves in Virginia*; *Letters on the Roanoke Navigation*; *The Valley of Shenandoah*; *Life of Thomas Jefferson, with Parts of his Correspondence*; *Progress of the United States in Population and Wealth in Fifty Years*; *History of the United States from their Colonization to the End of the Twenty-sixth Congress in 1841*, etc. He died in Sherwood, Va., April 10, 1861.

Tucker, JOSIAH, clergyman; born in Laugharne, Wales, in 1711; educated at Oxford, he took orders, and was for many years a rector in Bristol; in 1758 he was Dean of Gloucester; he was a prolific writer on political and religious subjects,

and published several tracts on the dispute between Great Britain and the American colonies, which attracted much attention.

The British ministry knew more of the differences of opinion in the Continental Congress than did the Americans, for Gal-
loway had let out the secret to friends of the crown. This fact encouraged Lord

SEAL AND SIGNATURE OF TRYON.

North and his colleagues to believe that a little firmness on the part of Great Britain would shake the resolution and break up the apparent union of the colonists. It was known that a large portion of the most respectable and influential of the inhabitants of the colonies were warmly attached to the mother-country. In several colonies there was a strong prejudice felt towards New England, where the most violent proceedings had occurred. The Quakers, as a body, were opposed to violent measures. The governor of Pennsylvania was indifferent, and Scotch Highlanders settled in New York, and the Carolinas and Georgia were very loyal. Even should the union remain perfect, it was believed the limited resources of the colonists would be wholly inadequate to any obstinate or lengthened resistance. Military officers boasted that, at the head of a few regiments, they would "march from one end of America to the other." All British writers and speakers exercised their pens and tongues in the same strain. Only one had the good sense to recommend a peaceful separation. That was Dean Tucker. He proposed that Parliament, by a solemn act declaring them to have forfeited all the privileges of British subjects by sea and land, should

TUCKER—TUCSON

cut off the rebellious provinces from the British Empire; with provision, however, for granting pardon and restoration to either or all of them on their humble petition to that effect. Had this proposition been then adopted, Great Britain would have still retained a large and influential party in the colonies, the hatreds engendered by war would have been avoided, and, at the worst, the colonies would have been lost to Great Britain, as they finally were, without the expenditure of blood and treasure on both sides which the war caused. But vulgar expedients were preferred, and this proposition was denounced as the height of folly, and even the wise Burke called it "childish." Dean Tucker died in Gloucester, England, Nov. 4, 1799.

Tucker, NATHANIEL BEVERLY, lawyer; born in Williamsburg, Va., Sept. 6, 1784; graduated at William and Mary College in 1801; admitted to the bar and practised in his native State till 1815, when he removed to Mississippi, serving there as judge in the circuit court till 1830. Returning to Virginia he was Professor of Law at William and Mary College in 1834-51. He was the author of *A Key to the Disunion Conspiracy; Discourse on the Dangers that Threaten the Free Institutions of the United States; Lectures Intended to Prepare the Student for the Study of the Constitution of the United States*, etc. He died in Winchester, Va., Aug. 26, 1851.

Tucker, SAMUEL, naval officer; born in Marblehead, Mass., Nov. 1, 1747; was a captain in the merchant service, sailing between Boston and London, before the Revolution. In March, 1777, he was commissioned a captain in the Continental navy, and, in command of the *Boston*, he took John Adams to France as American minister in February, 1778. During 1779 he took many prizes. In 1780 he helped in the defence of Charleston; was made prisoner; and was released in June, 1781, when he took command of the *Thorne*, and made many prizes, receiving, at the close of the war, the thanks of Congress. He settled in Bristol, Me., in 1792; and during the War of 1812 he captured, by a trick, a British vessel which had greatly annoyed the shipping in that vicinity. He was several times in the legislatures of Maine and Massachu-

setts. He died in Bremen, Me., March 10, 1833.

Tucker, ST. GEORGE, jurist; born in Port Royal, Bermuda, July 10, 1752; graduated at the College of William and Mary in 1772; studied law, but entered the public service at the beginning of the Revolutionary War, planning and assisting personally in the seizure of a large amount of stores in a fortification at Bermuda. He commanded a regiment at the siege of Yorktown, where he was severely wounded. After the war he became a Virginia legislator, a reviser and digester of the laws of Virginia, professor in the College of William and Mary, and member of the convention at Annapolis in 1786 which led to that of 1787 that framed the national Constitution. He was a judge in the State courts nearly fifty years, and of the court of appeals from 1803 to 1811. In 1813 he was made a judge of the United States district court. Judge Tucker was possessed of fine literary taste and keen wit, and he was a poet of no ordinary ability. He wrote some poetical satires under the name of **PETER PINDAR**; also some political tracts; and in 1803 published an annotated edition of *Blackstone*. He died in Edgewood, Nelson co., Va., Nov. 10, 1828.

Tuckerman, BAYARD, author; born in New York, July 2, 1855; graduated at Harvard College in 1878; was lecturer on English literature, Princeton University, in 1898-1907. He wrote *Life of Lafayette; Peter Stuyvesant; William Jay and the Abolition of Slavery; Diary of Philip Home; Philip Schuyler, Major-General in the American Revolution*, etc.

Tuckerman, HENRY THEODORE, author; born in Boston, Mass., April 20, 1813; received an academic education; and went to Europe in 1833 and 1837; became contributor to periodicals; and wrote *Artist Life, or Sketches of American Painters; Memorial of Horatio Greenough; Essay on Washington; America and Her Commentators*, etc. He died in New York City, Dec. 17, 1871.

Tucson, city and capital of Pima county, Ariz.; on the Santa Cruz River, 250 miles e. of Yuma; is the seat of the University of Arizona; and has a large trade in hides, wool, precious metals, etc., and in special supplies for the United States

army and for the Indians of that section. The place was first settled by Jesuit missionaries in 1560. Prior to that year it had been an Indian town. In 1867-77 it was the capital of the Territory of Arizona. The United States Signal Station here is 2,404 feet above sea-level. Pop. (1910), 13,193.

Tudor, WILLIAM, diplomatist; born in Boston, Mass., Jan. 28, 1779; graduated at Harvard College in 1796; travelled in Europe; founded the Anthology Club and contributed to its journal, the *Monthly Anthology*; founded *The North American Review* in 1815; published *Letters on the Eastern States*; was consul at Lima in 1823; *chargé d'affaires* in Brazil, in 1827; and was the originator of the Bunker Hill monument. He died in Rio de Janeiro, March 9, 1830.

Tulane, PAUL, philanthropist; born in Cherry Valley, N. J., in May, 1801; made a tour of the Southwest in 1818; settled in New Orleans in 1822, where he engaged in business till 1856, when he transferred part of his estate to the North, and later permanently removed to Princeton, N. J. He retired with a large fortune in 1867. He assisted several charitable institutions; and gave about \$1,100,000 toward promoting the higher education of white youth of Louisiana, which was used to found Tulane University in New Orleans. He died in Princeton, N. J., March 27, 1877.

Tulane University, an educational institution in New Orleans, La., formerly known as the University of Louisiana, and reorganized in 1884 after PAUL TULANE (*q. v.*) had set apart a considerable fortune for the superior education of white youth in the South, which money came into the possession of the university, the name of which was changed in honor of the donor. The university has colleges of medicine, law, art, sciences, and technology; the university department of philosophy and science; and the H. Sophie Newcomb Memorial College for Women, founded on a separate endowment of \$500,000 by Mrs. Joseph Louise Newcomb. The university has grounds and buildings valued at over \$1,800,000; endowment funds exceeding \$2,500,000; scientific apparatus, etc., \$125,000; volumes in the library, 55,000; average number of faculty, 190;

average student attendance, 2,500; ordinary annual income, \$175,000.

Tullahoma Campaign. The Confederate commander Bragg, after the battle of MURFREESBORO (*q. v.*), retreated to Shelbyville, about 25 miles south from Murfreesboro, taking part of his army to Tullahoma, somewhat farther away. Here he intrenched to resist the Federal advance. It was not until June 24, 1863, that General Rosecrans advanced from Murfreesboro, and in a short campaign of fifteen days (June 24-July 7), without severe fighting, compelled Bragg to evacuate middle Tennessee and retreat across the Tennessee River. See CHICKAMAUGA, BATTLE OF; ROSECRANS, WILLIAM STARKE.

Tunis. One of the Barbary powers which preyed upon commerce. In 1797 the United States paid \$107,000 as a tribute. See ALGIERS; TRIPOLI.

Tunkers. See DUNKARDS.

Tunnel Hill (Ga.), the scene of a sharp skirmish, Feb. 23 and 25, 1864, the Nationals under Palmer, and the Confederates under Stewart and Anderson. The result was indecision, but Palmer withdrew his forces.

Tupelo, BATTLE OF. In July, 1864, Gen. A. J. Smith, with some 9,000 infantry and 3,000 cavalry, was sent against Forrest at Tupelo, Miss. They were attacked by Gen. A. Buford with an equal force. After a severe fight the Confederates withdrew to Harrisburg and the Nationals to Memphis. Over a thousand were killed and wounded on each side in the battle.

Tupper, BENJAMIN, military officer; born in Stoughton, Mass., in August, 1738; was a soldier in the French and Indian War, and afterwards taught school in Easton. He was very active in the siege of Boston, and was colonel of a Massachusetts regiment early in 1776. In August of that year he commanded the gunboats and galleys in the Hudson River; served under Gates in the Northern army in 1777; was in the battle of Monmouth the next year; and before the end of the war was made a brigadier-general. Tupper was one of the originators of the Ohio Land Company, and was appointed surveyor of Ohio lands in 1785. In suppressing SHAY'S INSURRECTION (*q. v.*) he was distinguished. He settled at Marietta in

TURGOT—TURNER

1787, and became judge in 1788. He died in Marietta, O., in June, 1792.

Turgot, ANNE, ROBERT JAQUES, statesman, born in Paris, May 10, 1727; controller-general of France (equivalent to our Secretary of the Treasury) 1774. He abolished the tariff barriers which existed between the various provinces of the kingdom of France, thus, for the first time, permitting free trade between the different provinces. He was dismissed from office in 1776, but was influential in securing for the United States the French Treaty of Alliance in 1778. He wrote *Réflexions sur la situation des Américains des Etats-Unis*. In 1750, twenty-five years before Washington had begun to favor independence, Turgot had likened colonies to fruit which clings to the parent stem only until ripe, and predicted that what Carthage once did "America will sometime do."

Turnbull, ROBERT JAMES, author; born in New Smyrna, Fla., in January, 1775; was taken by his parents to Charleston, S. C., during the Revolutionary War; studied law and practised in Charleston till 1810, when he retired to a plantation in the country. In 1827 he published a stirring series of papers, under the title of *The Crisis*, over the signature of "Brutus," which sounded the tocsin of resistance. He repudiated the moderation and nationalism of "Messrs. Monroe and Calhoun," and stood squarely on the doctrine that the only safety for the South was in the cultivation of sectionalism. "In the Northern, Eastern, Middle, and Western States," said he, "the people have no fears whatever from the exercise of the implied powers of Congress on any subject; but it is in the South alone where uneasiness prevails on the subject of consolidation." "The more national and the less federal the government becomes, the more certainly will the interest of the great majority of the States be promoted, but with the same certainty will the interests of the South be depressed and destroyed."

He was a staunch supporter of the nullification movement, and claimed that "each State has the unquestionable right to judge of the infractions of the Constitution, and to interpose its sovereign power to arrest their progress and to

protect its citizens." After President Jackson issued his nullification proclamation (see JACKSON, ANDREW) Turnbull was the first one to enlist when volunteers were called to resist the federal government. He was the author of a *Visit to the Philadelphia Penitentiary*; *The Tribunal of Dernier Ressort*; numerous newspaper and magazine articles, etc. He died in Charleston, S. C., June 15, 1833.

Turner, FREDERICK JACKSON, historian; born in Portage, Wis., Nov. 14, 1861; graduated at the University of Wisconsin, pursued studies in history at Johns Hopkins University, and became professor of American history at the University of Wisconsin and director of its School of History. He was the author of *The Indian Trade in Wisconsin*; *Significance of the Frontier in American History*; *The West as a Field for Historical Study*; *Western State-Making in the Revolutionary Era*; *The Origin of Genet's Projected Attack on Louisiana and the Floridas*; *Documents Illustrative of Genet's Proposed Expedition Against Louisiana and the Floridas*; *Dominant Forces in Western Life*; *Rise of the New West*, etc.

Turner, GEORGE, legislator; born in Edina, Mo., Feb. 25, 1850; associate justice of the Supreme Court of the Territory of Washington, 1884-88; elected Senator for the State of Washington by a combination of the Silver Republicans, Democrats, and Populists. At the expiration of his term of office he was appointed a member of the ALASKA BOUNDARY COMMISSION (*q. v.*). On all the important points of the decision Lord Alverstone, Root, Lodge, and Turner concurred, while the two Canadian members dissented. In 1910 he was appointed one of the counsel of the United States on the North Eastern Fisheries Arbitration.

Turner, NAT, insurgent; born of negro slave parents in Virginia about 1800. In 1831 he confided to six men his belief that God had chosen him to lead the slaves to liberty, and laid out a plan to kill every white person and incite the whole slave population to insurrection. His party started out from Turner's own house, where his master was killed, and then a movement was made against neighboring plantations, where other slaves joined the party. In forty-eight

hours the party numbered sixty and had killed fifty-five white persons. The insurgents then made their way towards Jerusalem, Va., where they expected to increase their number and be supplied with fire-arms, but they divided and were attacked by two bodies of white men. Turner escaped to the woods, where, after living for two months, he was captured, tried, and hanged in Jerusalem, Va., Nov. 11, 1831. About the same time fifty-three other negroes were tried, seventeen of whom were hanged, while many others who were thought to be implicated were tortured, mutilated, shot, and burned.

Turner, THOMAS, naval officer; born in Washington, D. C., Dec. 23, 1808; entered the navy in April, 1825; was actively engaged in the war with Mexico. In command of the sloop-of-war *Saratoga*, he captured two Spanish steamers in the harbor of San Antonio, March 6, 1860. In the attack on the forts in Charleston Harbor, in April, 1863, he commanded the *New Ironsides*. In 1869-70 he commanded the Pacific Squadron. In May, 1868, he was made rear-admiral, and in 1870 retired. He died in Glen Mills, Pa., March 24, 1883.

Turner's Falls, ENGAGEMENT AT Around the falls in the Connecticut River known as Turner's a sharp action occurred in May, 1676. A large body of Indians, who had desolated Deerfield, were encamped here. Captain Turner was then in command of the English troops in the valley, and, taking 120 mounted men, started on a night ride through Hadley and Deerfield in search of Indians. He found them fast asleep in their camp, and surprised them. Many fled to their canoes, but, leaving their paddles behind, went over the falls. Others hid away among the rocks, and were killed, and others were shot while crossing the river. After the battle the bodies of 100 Indians were found dead at their camp, and 140 who went over the falls perished. About 300 Indians were destroyed. Turner lost only one man. Another party of Indians were soon on his track, and a panic seized the troops when it was rumored that King Philip, with 1,000 men, was in pursuit. A running fight occurred. Turner was killed, many of his men were slain, and Captain Holyoke, who took command of

the whole, died not long afterwards from the effects of the excitement and fatigue of the eventful May 10, 1676. It was a severe blow to King Philip.

Turpentine State, a popular name of North Carolina because of the immense quantities of turpentine exported therefrom.

Tuscarora Indians, a tribe of the Iroquois Confederacy, who were separated from their kindred at an early day, and were seated in North Carolina when the Europeans came. They were divided into seven clans, and at the beginning of the eighteenth century occupied fifteen villages and had 1,200 warriors. They attempted to exterminate the white people in North Carolina in 1711, but troops that came to the aid of the assailed from South Carolina chastised them in a battle fought near the Neuse (Jan. 28, 1712), killing and wounding 400 of them. They made peace, but soon broke it. At war again in 1713, they were subdued by Colonel Moore, of South Carolina, at their fort near Snow-hill (March 20), who captured 800 of them. The remaining Tuscaroras fled northward, and joined the Iroquois Confederacy, constituting the sixth nation of that league. In 1910 there were 364 Tuscaroras in New York State and 416 in Canada.

Twain, MARK. See CLEMENS, SAMUEL LANGHORNE.

Tweed, WILLIAM MARCY, politician; born in New York City, April 3, 1823; was brought up in the trade of chair-making, but finally studied law and was admitted to the bar. At different times from 1850 to 1870 he filled several public offices, municipal, State, and national, being a member of Congress in 1853-55, and a State Senator in 1867. Being appointed commissioner of public works for the city of New York in 1870, he succeeded, in connection with a "ring," of which he was the leader, in appropriating vast sums of public money to his own use. He was arrested on charges of malfeasance in office, but gave bail in \$1,000,000, and was released. Soon afterwards he was re-elected State Senator, but did not take his seat. In 1873 he was found guilty of fraud, fined \$12,550, and sentenced to twelve years' imprisonment. In 1875 a

suit was brought against him by the people of New York to recover \$6,000,000 which he had fraudulently appropriated; but on June 15, in the same year, the court of appeals decided that his imprisonment was illegal, because the court below had exceeded its powers in pronouncing a cumulative sentence against him. Being released from jail, he was at once ordered to find bail for \$3,000,000 in the civil suits then pending against him, and, failing to secure it, he was sent to Ludlow Street jail. On Dec. 4, in charge of two keepers, he was permitted to visit his home, and while there he escaped from custody, and

made his way to Spain. His liberty, however was of short duration; he was arrested by order of the Spanish government, and delivered to the officers of the United States. Being returned to New York, he was again imprisoned in Ludlow Street jail, and there he died April 12, 1878. The operations of Tweed and his associates—known as the Tweed Ring—during their five years' domination in New York added over \$100,000,000 to the bonded debt of the city, doubled its annual expenditures, and cost tax-payers the enormous sum of \$160,000,000.

Twichell, JOSEPH HOPKINS, clergyman; born in Southington, Conn., May 27, 1838; graduated at Yale in 1859; and later at the Union Theological and Andover Theological seminaries; served through the Civil War as chaplain; has been pastor of the Asylum Hill Congregational

WILLIAM MARCY TWEED.

Church at Hartford, Conn., since 1865. He wrote *Life of John Winthrop*; *Some Puritan Love-Letters*, etc.

Twiggs, DAVID EMANUEL, military officer; born in Richmond county, Ga., in 1790; entered the United States military service as captain in the spring of 1812, and became major of infantry in 1814. In 1836 he became colonel of dragoons, and as commander of a brigade he distinguished himself in the battles of PALO ALTO and RESACA DE LA PALMA (*qq. v.*). He was made brigadier-general June 30, 1846, and was brevetted major-general for gallantry at MONTEREY (*q. v.*). Twiggs commanded a division in Scott's campaign in Mexico in 1847, and in 1848 he was made civil and military governor of Vera Cruz. Early in 1861 he was in command of United States troops in Texas.

General Twiggs had served his country

TWIGGS, DAVID EMANUEL

honorably in its armies for forty years, but the virus which corrupted so many noble characters did not spare him. He was a native of Georgia, and seems to have been under the complete control of the Confederate leaders. He was placed in command of the Department of Texas only a few weeks before the act about to be recorded. A State convention in Texas appointed a committee of safety, who sent two of their number (Devine and Maverick) to treat with Twiggs for the surrender of United States troops and property into the hands of the Texas Confederates. Twiggs had already shown signs of disloyalty. These had been reported to the War Department, when Secretary Holt, in a general order (Jan.

general with the keen eye of suspicion, foiled them. He duplicated the orders, and sent two couriers with them, by different routes. One of them reached Waite Feb. 17; but the dreaded mischief had been accomplished. Twiggs had been cautious. He did not commit himself in writing; he always said, "I will give up everything." He was now allowed to temporize no longer. He had to find an excuse for surrendering his troops, consisting of two skeleton corps. It was readily found. Ben McCulloch, the famous Texan ranger, was not far off with 1,000 men. He approached San Antonio at 2 A.M. on Feb. 10. He had been joined by armed KNIGHTS OF THE GOLDEN CIRCLE (*q. v.*) near the town. With a considerable body of followers, he rushed into the town with yells and took possession. Twiggs pretending to be surprised, met McCulloch in the Main Plaza, and there, at noon, Feb. 16, a negotiation for surrender (begun by the commissioners as early as the 7th) was consummated. He gave up to the Confederate authorities of Texas all the National forces in that State, about 2,500 in number, and with them all the stores and munitions of war, valued, at their cost, at \$1,200,000. He surrendered all the forts in his department. By this act Twiggs deprived the government of the most effective portion of the regular army. When the government heard of it, an order was issued (March 1) for his dismissal "from the army of the United States for treachery to the flag of his country." Twiggs threatened, in a letter to the ex-President, to visit Buchanan in person, to call him to account for officially calling him a "traitor." The betrayed troops, who, with most of their officers, remained loyal, were allowed to leave Texas, and went to the

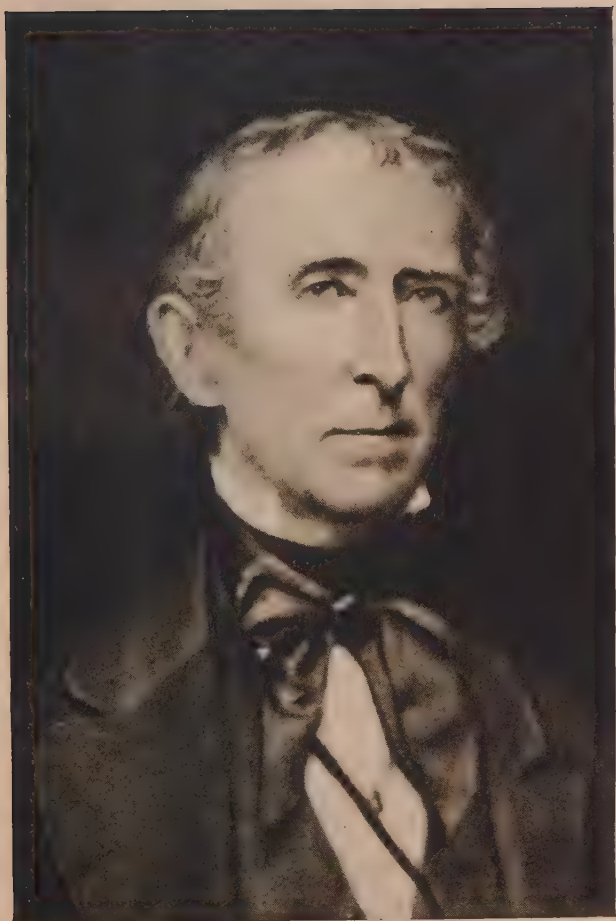

DAVID EMANUEL TWIGGS.

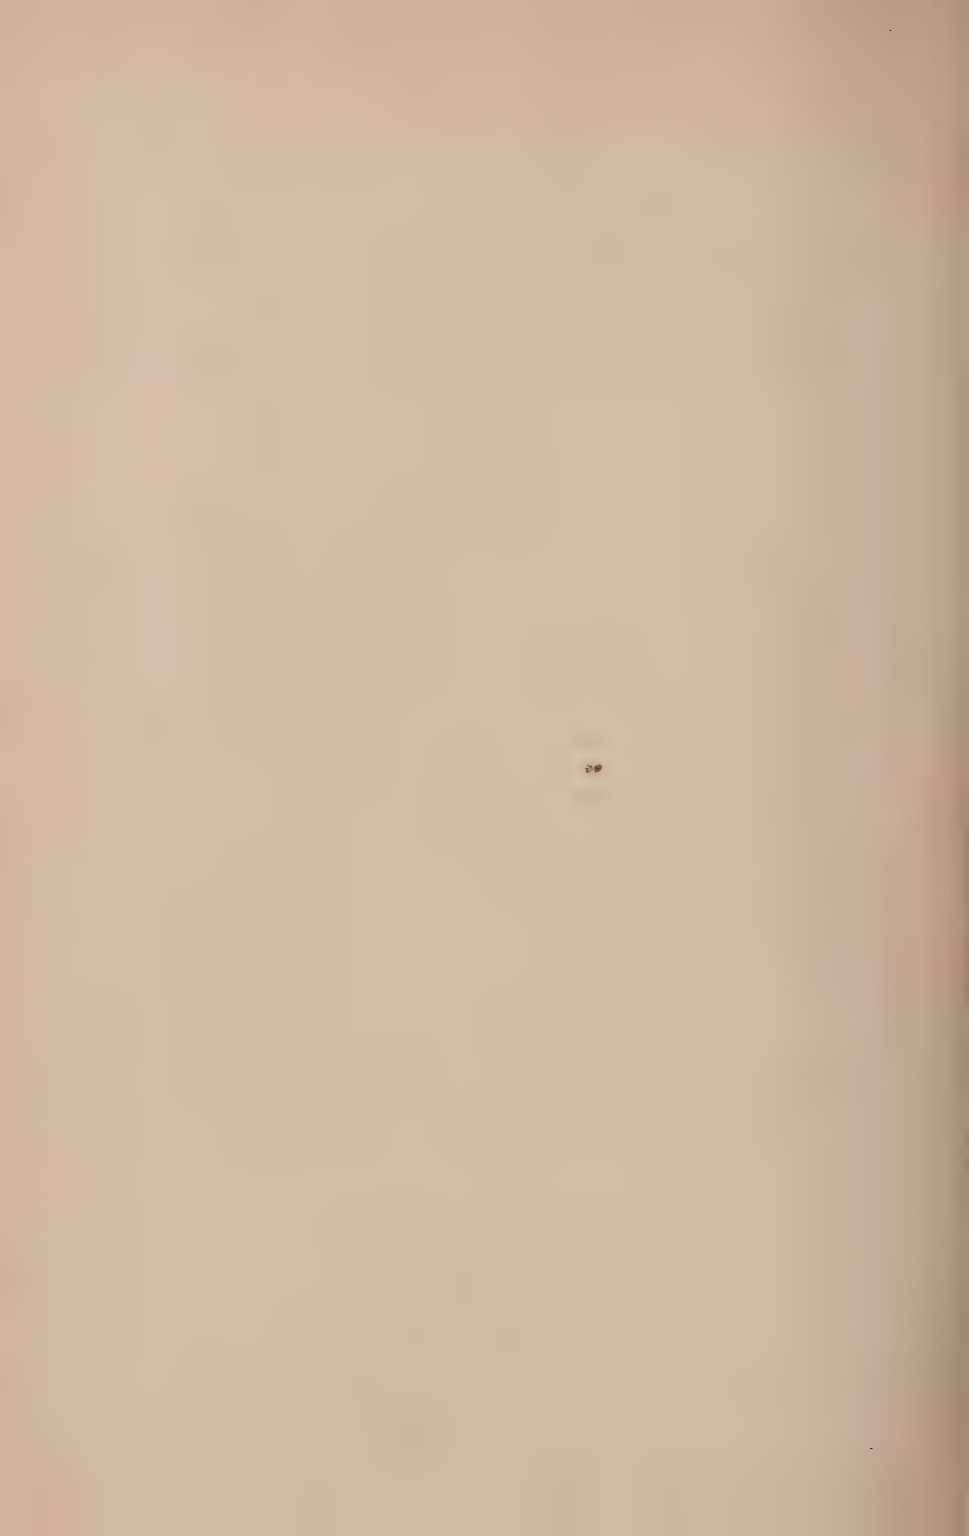

18), relieved him from the command in Texas, and gave it to Col. Charles A. Waite. When Devine and Maverick heard of the arrival of the order in San Antonio, they took measures to prevent its reaching Colonel Waite, who was 60 miles distant; but the vigilant Colonel Nichols, who had watched the movements of the

North, taking quarters in Fort Hamilton, at the entrance to New York Harbor.

General Twiggs was then given an important position in the Confederate army, and was for a short time in command at New Orleans, resigning towards the close of 1861. He died in Augusta, Ga., Sept. 15, 1862.

John Tyler

TWIGHTWEES—TYLER

Twightwees. See MIAMI INDIANS.

Twining, WILLIAM JOHNSON, military officer; born in Indiana, Aug. 2, 1839; graduated at the United States Military Academy, and was commissioned a first lieutenant of engineers in 1863; and served through the remainder of the Civil War as assistant engineer in the Department of the Cumberland and as chief engineer of the Department of the Ohio. He was engaged in the invasion of Georgia, in the operations against General Hood's army in Tennessee, in the battles at Franklin and Nashville, and in the operations in North Carolina; was made captain of engineers in 1868; major in 1877; and was brevetted major and lieutenant-colonel of volunteers for gallantry during the war. After the war he served as assistant Professor of Engineering at the United States Military Academy in 1865-67; chief engineer of the Department of Dakota, commissioner for the survey of the United States boundary-line in 1872-76, and as commissioner of the District of Columbia in 1878-82. He died in Washington, D. C., March 5, 1882.

Tybee Island, an island off the entrance to the Savannah River, belonging to Chatham county, Ga.; noted as the place where Gen. QUINCY A. GILLMORE (q. v.) erected the batteries with which he breached Fort Pulaski on Cockspur Island, on April 11, 1862.

Tyler, DANIEL, military officer; born in Brooklyn, Conn., Jan. 7, 1799; graduated at West Point in 1819. In 1828-29 he visited France to study improvements in artillery; and in May, 1834, he resigned and practised civil engineering. At the breaking out of the Civil War he became colonel of the 1st Connecticut Volunteers, and soon afterwards brigadier-general of three months' troops. Next in rank to General McDowell, he was second in command in the battle of Bull Run. In March, 1862, he was ordered to the West, and commanded a division of the Army of the Mississippi. Afterwards he was employed in guarding the Upper Potomac. When the Confederate army invaded Maryland, in 1863, he was in command at Harper's Ferry. General Tyler resigned April 6, 1864. He died in New York City, Nov. 30, 1882.

TYLER, JOHN

Tyler, JOHN, tenth President of the United States, from April 4, 1841, to March 4, 1845; Whig; born in Charles City county, Va., March 29, 1790; graduated at the College of William and Mary in 1807; admitted to the bar in 1809. Two years afterwards he was elected to the Virginia legislature, and was re-elected for five successive years. In 1816 he was appointed to fill a vacancy in Congress—and was twice re-elected—in which he opposed all internal improvements by the general government, the United States Bank, a protective tariff, and all restrictions on slavery. He was afterwards in the State legislature, and in December, 1825, was chosen governor of Virginia by the legislature, to fill a vacancy. In 1827 he became a United States Senator, and was re-elected in 1833, when he was a firm supporter of the doctrine of State supremacy, and avowed his sympathy with the South Carolina Nullifiers. He joined the Whig party, and was elected

by them Vice-President of the United States in 1840. On the death of President Harrison he became President (see CABINET, PRESIDENT'S). He lost the confidence of both parties by his acts during his administration, and was succeeded in the Presidential office by James K. Polk, in 1845. All of his cabinet excepting Mr. Webster, resigned in 1841, and he left it after an important treaty had been concluded and ratified (August, 1842), when Hugh S. Legaré succeeded him. The last important act of Tyler's administration was signing the act for the annexation of Texas. He had been nominated for the Presidency by a convention of office-holders in May, 1844, but in August, perceiving that he had no popular support, he withdrew from the contest. In February, 1861, he was president of the peace convention held at Washington, D. C. He died in Richmond, Va., Jan. 18, 1862.

Negotiations with Great Britain.—In the following special message President

Tyler details the results of several important negotiations with the British minister in Washington:

WASHINGTON, Aug. 11, 1842.

To the Senate of the United States,—
I have the satisfaction to communicate to the Senate the results of the negotiations recently had in this city with the British minister, special and extraordinary.

These results comprise:

First. A treaty to settle and define the boundaries between the territories of the United States and the possessions of her Britannic Majesty in North America, for the suppression of the African slave-trade, and the surrender of criminals fugitive from justice in certain cases.

Second. A correspondence on the subject of the interference of the colonial authorities of the British West Indies with American merchant vessels driven by stress of weather or carried by violence into the ports of those colonies.

Third. A correspondence upon the subject of the attack and destruction of the steamboat *Caroline*.

Fourth. A correspondence on the subject of impressment.

If this treaty shall receive the approbation of the Senate, it will terminate a difference respecting boundary which has long subsisted between the two governments, has been the subject of several ineffectual attempts at settlement, and has sometimes led to great irritation, not without danger of disturbing the existing peace. Both the United States and the States more immediately concerned have entertained no doubt of the validity of the American title to all the territory which has been in dispute, but that title was controverted, and the government of the United States had agreed to make the dispute a subject of arbitration. One arbitration had been actually had, but had failed to settle the controversy, and it was found at the commencement of last year that a correspondence had been in progress between the two governments for a joint commission, with an ultimate reference to an empire or arbitrator with authority to make a final decision. That corre-

spondence, however, had been retarded by various occurrences, and had come to no definite result when the special mission of Lord Ashburton was announced. This movement on the part of England afforded in the judgment of the executive a favorable opportunity for making an attempt to settle this long-existing controversy by some agreement or treaty without further reference to arbitration.

It seemed entirely proper that if this purpose were entertained consultation should be had with the authorities of the States of Maine and Massachusetts. Letters, therefore, of which copies are herewith communicated, were addressed to the governors of those States, suggesting that commissioners should be appointed by each of them, respectively, to repair to this city and confer with the authorities of this government on a line by agreement or compromise, with its equivalents and compensations. This suggestion was met by both States in a spirit of candor and patriotism, and promptly complied with. Four commissioners on the part of Maine, and three on the part of Massachusetts, all persons of distinction and high character, were duly appointed and commissioned, and lost no time in presenting themselves at the seat of the government of the United States. These commissioners have been in correspondence with this government during the period of the discussions; have enjoyed its confidence and freest communications; have aided the general object with their counsel and advice, and in the end have unanimously signified their assent to the line proposed in the treaty.

Ordinarily it would be no easy task to reconcile and bring together such a variety of interests in a matter in itself difficult and perplexed, but the efforts of the government in attempting to accomplish this desirable object have been seconded and sustained by a spirit of accommodation and conciliation on the part of the States concerned, to which much of the success of these efforts is to be ascribed.

Connected with the settlement of the line of the northeastern boundary, so far as it respects the States of Maine and Massachusetts, is the continuation of that line along the highlands to the north-

westernmost head of the Connecticut River. Which of the sources of that stream is entitled to this character has been matter of controversy and of some interest to the State of New Hampshire. The King of the Netherlands decided the main branch to be the northwesternmost head of the Connecticut. This did not satisfy the claim of New Hampshire. The line agreed to in the present treaty follows the highlands to the head of Hall's Stream, and thence down that river, embracing the whole claim of New Hampshire, and establishing her title to 100,000 acres of territory more than she would have had by the decision of the King of the Netherlands.

By the treaty of 1783 the line is to proceed down the Connecticut River to the forty-fifth degree of north latitude, and thence west by that parallel till it strikes the St. Lawrence. Recent examinations having ascertained that the line heretofore received as the true line of latitude between those points was erroneous, and that the correction of this error would not only leave on the British side a considerable tract of territory heretofore supposed to belong to the States of Vermont and New York, but also Rouse's Point, the site of a military work of the United States, it has been regarded as an object of importance not only to establish the rights and jurisdiction of those States up to the line to which they have been considered to extend, but also to comprehend Rouse's Point within the territory of the United States. The relinquishment by the British government of all the territory south of the line heretofore considered to be the true line has been obtained, and the consideration for this relinquishment is to inure by the provisions of the treaty to the States of Maine and Massachusetts.

The line of boundary, then, from the source of the St. Croix to the St. Lawrence, so far as Maine and Massachusetts are concerned, is fixed by their own consent and for considerations satisfactory to them, the chief of these considerations being the privilege of transporting the lumber and agricultural products grown and raised in Maine on the waters of the St. John and its tributaries down that river to the ocean free from imposition or

disability. The importance of this privilege, perpetual in its terms, to a country covered at present by pine forests of great value, and much of it capable hereafter of agricultural improvement, is not a matter upon which the opinion of intelligent men is likely to be divided. So far as New Hampshire is concerned, the treaty secures all that she requires, and New York and Vermont are quieted to the extent of their claim and occupation. The difference which would be made in the northern boundary of these two States by correcting the parallel of latitude may be seen on Tanner's maps (1836), new atlas, maps Nos. 6 and 9.

From the intersection of the forty-fifth degree of north latitude with the St. Lawrence and along that river and the lakes to the water communication between Lake Huron and Lake Superior the line was definitely agreed on by the commissioners of the two governments under the sixth article of the treaty of Ghent; but between this last-mentioned point and the Lake of the Woods the commissioners, acting under the seventh article of that treaty, found several matters of disagreement, and therefore made no joint report to their respective governments. The first of these was Sugar Island, or St. George Island, lying in St. Mary's River, or the water communication between Lakes Huron and Superior. By the present treaty this island is embraced in the territories of the United States. Both from soil and position it is regarded as of much value.

Another matter of difference was the manner of extending the line from the point at which the commissioners arrived, north of Isle Royale, in Lake Superior, to the Lake of the Woods. The British commissioner insisted on proceeding to Fond du Lac, at the southwest angle of the lake, and thence by the river St. Louis to the Rainy Lake. The American commissioner supposed the true course to be to proceed by way of the Dog River. Attempts were made to compromise this difference, but without success. The details of these proceedings are found at length in the printed separate reports of the commissioners.

From the imperfect knowledge of this remote country at the date of the treaty of peace, some of the descriptions in that treaty do not harmonize with its natural

features as now ascertained. "Long Lake" is nowhere to be found under that name. There is reason for supposing, however, that the sheet of water intended by that name is the estuary at the mouth of Pigeon River. The present treaty therefore adopts that estuary and river, and afterwards pursues the usual route across the height of land by the various portages and small lakes till the line reaches Rainy Lake, from which the commissioners agreed on the extension of it to its termination in the northwest angle of the Lake of the Woods. The region of country on and near the shore of the lake between Pigeon River on the north and Fond du Lac and the river St. Louis on the south and west, considered valuable as a mineral region, is thus included within the United States. It embraces a territory of 4,000,000 acres northward of the claim set up by the British commissioners under the treaty of Ghent. From the height of land at the head of Pigeon River westerly to the Rainy Lake the country is understood to be of little value, being described by surveyors and marked on the map as a region of rock and water.

From the northwest angle of the Lake of the Woods, which is found to be in latitude $45^{\circ} 23' 55''$ north, existing treaties require the line to be run due south to its intersection with the forty-fifth parallel, and thence along that parallel to the Rocky Mountains.

After sundry informal communications with the British minister upon the subject of the claims of the two countries to territory west of the Rocky Mountains, so little probability was found to exist of coming to any agreement on that subject at present that it was not thought expedient to make it one of the subjects of formal negotiation to be entered upon between this government and the British minister as part of his duties under his special mission.

By the treaty of 1783 the line of division along rivers and lakes from the place where the forty-fifth parallel of north latitude strikes the St. Lawrence to the outlet of Lake Superior is invariably to be drawn through the middle of such waters, and not through the middle of their main channels. Such a line, if extended according to the literal terms of

the treaty, would, it is obvious, occasionally intersect islands. The manner in which the commissioners of the two governments dealt with this difficult subject may be seen in their reports. But where the line thus following the middle of the river or watercourse did not meet with islands, yet it was liable sometimes to leave the only practicable navigable channel altogether on one side. The treaty made no provision for the common use of the waters by the citizens and subjects of both countries.

It has happened, therefore, in a few instances that the use of the river in particular places would be greatly diminished to one party or the other if in fact there was not a choice in the use of channels and passages. Thus at the Long Sault, in the St. Lawrence, a dangerous passage, practicable only for boats, the only safe run is between the Long Sault Islands and Barnhardt's Island (all of which belong to the United States) on one side and the American shore on the other. On the one hand, by far the best passage for vessels of any depth of water from Lake Erie into the Detroit River is between Bois Blanc, a British island, and the Canadian shore. So, again, there are several channels or passages of different degrees of facility and usefulness between the several islands in the river St. Clair at or near its entry into the lake of that name. In these three cases the treaty provides that all the several passages and channels shall be free and open to the use of the citizens and subjects of both parties.

The treaty obligations subsisting between the two countries for the suppression of the African slave-trade, and the complaints made to this government within the last three or four years, many of them but too well founded, of the visitation, seizure, and detention of American vessels on that coast by British cruisers could not but form a delicate and highly important part of the negotiations which have now been held.

The early and prominent part which the government of the United States has taken for the abolition of this unlawful and inhuman traffic is well known. By the tenth article of the treaty of Ghent it is declared that the traffic in slaves is irreconcilable with the principles of hu-

TYLER, JOHN

manity and justice, and that both his Majesty and the United States are desirous of continuing their efforts to promote its entire abolition; and it is thereby agreed that both the contracting parties shall use their best endeavors to accomplish so desirable an object. The government of the United States has by law declared the African slave-trade piracy, and at its suggestion other nations have made similar enactments. It has not been wanting in honest and zealous efforts made in conformity with the wishes of the whole country, to accomplish the entire abolition of the traffic in slaves upon the African coast, but these efforts and those of other countries directed to the same end have proved to a considerable degree unsuccessful. Treaties are known to have been entered into some years ago between England and France by which the former power, which usually maintains a large naval force on the African Station, was authorized to seize and bring in for adjudication vessels found engaged in the slave-trade under the French flag.

It is known that in December last a treaty was signed in London by the representatives of England, France, Russia, Prussia, and Austria, having for its professed object a strong and united effort of the five powers to put an end to the traffic. This treaty was not officially communicated to the government of the United States, but its provisions and stipulations are supposed to be accurately known to the public. It is understood to be not yet ratified on the part of France.

No application or request has been made to this government to become party to this treaty, but the course it might take in regard to it has excited no small degree of attention and discussion in Europe, as the principle upon which it is founded and the stipulations which it contains have caused warm animadversions and great political excitement.

In my message at the commencement of the present session of Congress, I endeavored to state the principles which this government supports respecting the right of search and the immunity of flags. Desirous of maintaining those principles fully, at the same time that existing obligations should be fulfilled, I have thought it most consistent with the honor

and dignity of the country that it should execute its own laws and perform its own obligations by its own means and its own power.

The examination or visitation of the merchant vessels of one nation by the cruisers of another for any purpose except those known and acknowledged by the law of nations, under whatever restraints or regulations it may take place, may lead to dangerous results. It is far better by other means to supersede any supposed necessity or any motive for such examination or visit. Interference with a merchant vessel by an armed cruiser is always a delicate proceeding, apt to touch the point of national honor as well as to effect the interests of individuals. It has been thought, therefore, expedient, not only in accordance with the stipulations of the treaty of Ghent, but at the same time as removing all pretext on the part of others for violating the immunities of the American flag upon the seas, as they exist and are defined by the law of nations, to enter into the articles now submitted to the Senate.

The treaty which I now submit to you proposes no alteration, mitigation, or modification of the rules of the law of nations. It provides simply that each of the two governments shall maintain on the coast of Africa a sufficient squadron to enforce separately and respectively the laws, rights, and obligations of the two countries for the suppression of the slave-trade.

Another consideration of great importance has recommended this mode of fulfilling the duties and obligations of the country. Our commerce along the western coast of Africa is extensive, and supposed to be increasing. There is reason to think that in many cases those engaged in it have met with interruptions and annoyances caused by the jealousy and instigation of rivals engaged in the same trade. Many complaints on this subject have reached the government. A respectable naval force on the coast is the natural resort and security against further occurrences of this kind.

The surrender to justice of persons who, having committed high crimes, seek an asylum in the territories of a neighboring nation would seem to be an act due to the

cause of general justice and properly belonging to the present state of civilization and intercourse. The British provinces of North America are separated from the States of the Union by a line of several thousand miles, and along portions of this line the amount of population on either side is quite considerable, while the passage of the boundary is always easy.

Offenders against the law on the one side transfer themselves to the other. Sometimes with great difficulty they are brought to justice, but very often they wholly escape. A consciousness of immunity from the power of avoiding justice in this way instigates the unprincipled and reckless to the commission of offences, and the peace and good neighborhood of the border are consequently often disturbed.

In the case of offenders fleeing from Canada into the United States, the governors of States are often applied to for their surrender, and questions of a very embarrassing nature arise from these applications. It has been thought highly important, therefore, to provide for the whole case by a proper treaty stipulation. The article on the subject in the proposed treaty is carefully confined to such offences as all mankind agree to regard as heinous and destructive of the security of life and property. In this careful and specified enumeration of crimes the object has been to exclude all political offences or criminal charges arising from wars or intestine commotions. Treason, misprision of treason, libels, desertion from military service, and other offences of similar character are excluded.

And lest some unforeseen inconvenience or unexpected abuse should arise from the stipulation rendering its continuance in the opinion of one or both of the parties not longer desirable, it is left in the power of either to put an end to it at will.

The destruction of the steamboat *Caroline* at Schlosser four or five years ago occasioned no small degree of excitement at the time, and became the subject of correspondence between the two governments. That correspondence, having been suspended for a considerable period, was renewed in the spring of the last year, but no satisfactory result having been arrived at, it was thought proper, though

the occurrence had ceased to be fresh and recent, not to omit attention to it on the present occasion. It has only been so far discussed in the correspondence now submitted, as it was accomplished by a violation of the territory of the United States. The letter of the British minister, while he attempts to justify that violation upon the ground of a pressing and overruling necessity, admitting, nevertheless, that even if justifiable an apology was due for it, and accompanying this acknowledgment with assurances of the sacred regard of his government for the inviolability of national territory, has seemed to me sufficient to warrant forbearance from any further remonstrance against what took place as an aggression on the soil and territory of the country. On the subject of the interference of the British authorities in the West Indies, a confident hope is entertained that the correspondence which has taken place, showing the grounds taken by this government, and the engagements entered into by the British minister, will be found such as to satisfy the just expectation of the people of the United States.

The impressment of seamen from merchant vessels of this country by British cruisers, although not practised in time of peace, and therefore not at present a productive cause of difference and irritation, has, nevertheless, hitherto been so prominent a topic of controversy, and is so likely to bring on renewed contentions at the first breaking out of a European war, that it has been thought the part of wisdom now to take it into serious and earnest consideration. The letter from the Secretary of State to the British minister explains the ground which the government has assumed and the principles which it means to uphold. For the defence of these grounds and the maintenance of these principles the most perfect reliance is placed on the intelligence of the American people and on their firmness and patriotism in whatever touches the honor of the country or its great and essential interests.

The Treaty with Texas.—On April 22, 1844, President Tyler sent the following special message to the Congress concerning the treaty between the United States and Texas:

TYLER, JOHN

WASHINGTON, *April 22, 1844.*

To the Senate of the United States,—
I transmit herewith, for your approval and ratification, a treaty which I have caused to be negotiated between the United States and Texas, whereby the latter, on the conditions herein set forth, has transferred and conveyed all its right of separate and independent sovereignty and jurisdiction to the United States. In taking so important a step I have been influenced by what appeared to me to be the most controlling considerations of public policy and the general good, and in having accomplished it, should it meet your approval, the government will have succeeded in reclaiming a territory which formerly constituted a portion, as it is confidently believed, of its domain under the treaty of cession of 1803 by France to the United States.

The country thus proposed to be annexed has been settled principally by persons from the United States, who emigrated on the invitation of both Spain and Mexico, and who carried with them into the wilderness which they have partially reclaimed the laws, customs, and political and domestic institutions of their native land. They are deeply indoctrinated in all the principles of civil liberty, and will bring along with them in the act of reassociation devotion to our Union and a firm and inflexible resolution to assist in maintaining the public liberty unimpaired—a consideration which, as it appears to me, is to be regarded as of no small moment. The country itself thus obtained is of incalculable value in an agricultural and commercial point of view. To a soil of inexhaustible fertility it unites a genial and healthy climate, and is destined at a day not distant to make large contributions to the commerce of the world. Its territory is separated from the United States in part by an imaginary line, and by the river Sabine for a distance of 310 miles, and its productions are the same with those of many of the contiguous States of the Union. Such is the country, such are its inhabitants, and such its capacities to add to the general wealth of the Union. As to the latter, it may be safely asserted that in the magnitude of its productions it will equal in a short time,

under the protecting care of this government, if it does not surpass, the combined production of many of the States of the confederacy. A new and powerful impulse will thus be given to the navigating interest of the country, which will be chiefly engrossed by our fellow-citizens of the Eastern and Middle States, who have already attained a remarkable degree of prosperity by the partial monopoly they have enjoyed of the carrying-trade of the Union, particularly the coastwise trade, which this new acquisition is destined in time, and that not distant, to swell to a magnitude which cannot easily be computed; while the addition made to the boundaries of the home market thus secured to their mining, manufacturing, and mechanical skill and industry will be of a character the most commanding and important. Such are some of the many advantages which will accrue to the Eastern and Middle States by the ratification of the treaty—advantages the extent of which it is impossible to estimate with accuracy or properly to appreciate. Texas, being adapted to the culture of cotton, sugar, and rice, and devoting most of her energies to the raising of these productions, will open an extensive market to the Western States in the important articles of beef, pork, horses, mules, etc., as well as in breadstuffs. At the same time, the Southern and Southeastern States will find in the fact of annexation protection and security to their peace and tranquillity, as well against all domestic as foreign efforts to disturb them, thus consecrating anew the union of the States and holding out the promise of its perpetual duration. Thus at the same time that the tide of public prosperity is greatly swollen, an appeal of what appears to the executive to be of an imposing, if not of a resistless, character is made to the interests of every portion of the country. Agriculture, which would have a new and extensive market opened for its produce; commerce, whose ships would be freighted with the rich productions of an extensive and fertile region; and the mechanical arts, in all their various ramifications, would seem to unite in one universal demand for the ratification of the treaty. But 'important as these considerations may appear, they are to be regarded as

but secondary to others. Texas, for reasons deemed sufficient by herself, threw off her dependence on Mexico as far back as 1836, and consummated her independence by the battle of San Jacinto in the same year, since which period Mexico has attempted no serious invasion of her territory, but the contest has assumed features of a mere border war, characterized by acts revolting to humanity. In the year 1836 Texas adopted her constitution, under which she has existed as a sovereign power ever since, having been recognized as such by many of the principal powers of the world; and contemporaneously with its adoption, by a solemn vote of her people, embracing all her population but ninety-three persons, declared her anxious desire to be admitted into association with the United States as a portion of their territory. This vote, thus solemnly taken, has never been reversed, and now by the action of her constituted authorities, sustained as it is by popular sentiment, she reaffirms her desire for annexation. This course has been adopted by her without the employment of any sinister measures on the part of this government. No intrigue has been set on foot to accomplish it. Texas herself wills it, and the executive of the United States, concurring with her, has seen no sufficient reason to avoid the consummation of an act esteemed to be so desirable by both. It cannot be denied that Texas is greatly depressed in her energies by her long-protracted war with Mexico. Under these circumstances it is but natural that she should seek for safety and repose under the protection of some stronger power, and it is equally so that her people should turn to the United States, the land of their birth, in the first instance, in the pursuit of such protection. She has often before made known her wishes, but her advances have to this time been repelled. The executive of the United States sees no longer any cause for pursuing such a course. The hazard of now defeating her wishes may be of the most fatal tendency. It might lead, and most probably would, to such an entire alienation of sentiment and feeling as would inevitably induce her to look elsewhere for aid, and force her either to enter into dangerous alliances with other nations, who, looking with

more wisdom to their own interests, would, it is fairly to be presumed, readily adopt such expedients; or she would hold out the proffer of discriminating duties in trade and commerce in order to secure the necessary assistance. Whatever step she might adopt looking to this object would prove disastrous in the highest degree to the interests of the whole Union. To say nothing of the impolicy of our permitting the carrying-trade and home market of such a country to pass out of our hands into those of a commercial rival, the government, in the first place, would be certain to suffer most disastrously in its revenue by the introduction of a system of smuggling upon an extensive scale, which an army of custom-house officers could not prevent, and which would operate to affect injuriously the interests of all the industrial classes of this country. Hence would arise constant collisions between the inhabitants of the two countries, which would evermore endanger their peace. A large increase of the military force of the United States would inevitably follow, thus devolving upon the people new and extraordinary burdens in order not only to protect them from the danger of daily collision with Texas herself, but to guard their border inhabitants against hostile inroads, so easily excited on the part of the numerous and warlike tribes of Indians dwelling in their neighborhood. Texas would undoubtedly be unable for many years to come, if at any time, to resist unaided and alone the military power of the United States; but it is not extravagant to suppose that nations reaping a rich harvest from her trade, secured to them by the advantageous treaties, would be induced to take part with her in any conflict with us, from the strongest considerations of public policy. Such a state of things might subject to devastation the territory of contiguous States, and would cost the country in a single campaign more treasure, thrice told over, than is stipulated to be paid and reimbursed by the treaty now proposed for ratification. I will not permit myself to dwell on this view of the subject. Consequences of a fatal character to the peace of the Union, and even to the preservation of the Union itself, might be dwelt upon. They will not,

however, fail to occur to the mind of the Senate and of the country. Nor do I indulge in any vague conjectures of the future. The documents now transmitted along with the treaty lead to the conclusion, as inevitable, that if the boon now tendered be rejected Texas will seek for the friendship of others. In contemplating such a contingency it cannot be overlooked that the United States are already almost surrounded by the possessions of European powers. The Canadas, New Brunswick, and Nova Scotia, the islands in the American seas, with Texas trammelled by treaties of alliance or of a commercial character differing in policy from that of the United States, would complete the circle. Texas voluntarily steps forth, upon terms of perfect honor and good faith to all nations, to ask to be annexed to the Union. As an independent sovereignty her right to do this is unquestionable. In doing so she gives no cause of umbrage to any other power; her people desire it, and there is no slavish transfer of her sovereignty and independence. She has for eight years maintained her independence against all efforts to subdue her. She has been recognized as independent by many of the most prominent of the family of nations, and that recognition, so far as they are concerned, places her in a position, without giving any just cause of umbrage to them, to surrender her sovereignty at her own will and pleasure. The United States, actuated evermore by a spirit of justice, has desired by the stipulations of the treaty to render justice to all. They have made provision for the payment of the public debt of Texas. We look to her ample and fertile domain as the certain means of accomplishing this; but this is a matter between the United States and Texas, and with which other governments have nothing to do. Our right to receive the rich grant tendered by Texas is perfect, and this government should not, having due respect either to its own honor or its own interests, permit its course of policy to be interrupted by the interference of other powers, even if such interference were threatened. The question is one purely American. In the acquisition, while we abstain most carefully from all that could interrupt the public peace,

we claim the right to exercise a due regard to our own. This government cannot consistently with its honor permit any such interference. With equal, if not greater, propriety might the United States demand of other governments to surrender their numerous and valuable acquisitions made in past time at numberless places on the surface of the globe, whereby they have added to their power and enlarged their resources.

To Mexico the executive is disposed to pursue a course conciliatory in its character, and at the same time to render her the most ample justice by conventions and stipulations not inconsistent with the rights and dignity of the government. It is actuated by no spirit of unjust aggrandizement, but looks only to its own security. It has made known to Mexico at several periods its extreme anxiety to witness the termination of hostilities between that country and Texas. Its wishes, however, have been entirely disregarded. It has ever been ready to urge an adjustment of the dispute upon terms mutually advantageous to both. It will be ready at all times to hear and discuss any claims Mexico may think she has on the justice of the United States, and to adjust any that may be deemed to be so on the most liberal terms. There is no desire on the part of the executive to wound her pride or affect injuriously her interest, but at the same time it cannot compromise by any delay in its action the essential interests of the United States. Mexico has no right to ask or expect this of us; we deal rightfully with Texas as an independent power. The war which has been waged for eight years has resulted only in the conviction with all others than herself that Texas cannot be reconquered. I cannot but repeat the opinion expressed in my message at the opening of Congress that it is time it had ceased. The executive, while it could not look upon its longer continuance without the greatest uneasiness, has, nevertheless, for all past time preserved a course of strict neutrality. It could not be ignorant of the fact of the exhaustion which a war of so long duration had produced. Least of all was it ignorant of the anxiety of other powers to induce Mexico to enter into terms of reconcilia-

tion with Texas, which, affecting the domestic institutions of Texas, would operate most injuriously upon the United States, and might most seriously threaten the existence of this happy Union. Nor could it be unacquainted with the fact that although foreign governments might disavow all design to disturb the relations which exist under the Constitution between these States, yet that one the most powerful among them had not failed to declare its marked and decided hostility to the chief feature in those relations and its purpose on all suitable occasions to urge upon Mexico the adoption of such a course in negotiating with Texas as to produce the obliteration of that feature from her domestic policy as one of the conditions of her recognition by Mexico as an independent State. The executive was also aware of the fact that formidable associations of persons, the subjects of foreign powers, existed, who were directing their utmost efforts to the accomplishment of this object. To these conclusions it was inevitably brought by the documents now submitted to the Senate. I repeat, the executive saw Texas in a state of almost hopeless exhaustion, and the question was narrowed down to the simple proposition whether the United States should accept the boon of annexation upon fair and even liberal terms, or, by refusing to do so, force Texas to seek refuge in the arms of some other power, either through a treaty of alliance, offensive and defensive, or the adoption of some other expedient which might virtually make her tributary to such power, and dependent upon it for all future time. The executive has full reason to believe that such would have been the result without its interposition, and that such will be the result in the event either of unnecessary delay in the ratification or of the rejection of the proposed treaty.

In full view, then, of the highest public duty, and as a measure of security against evils incalculably great, the executive has entered into the negotiation, the fruits of which are now submitted to the Senate. Independent of the urgent reasons which existed for the step it has taken, it might safely invoke the fact (which it confidently believes) that there exists no civil-

ized government on earth having a voluntary tender made it of a domain so rich and fertile, so replete with all that can add to national greatness and wealth, and so necessary to its peace and safety, that it would reject the offer. Nor are other powers, Mexico inclusive, likely in any degree to be injuriously affected by the ratification of the treaty. The prosperity of Texas will be equally interesting to all; in the increase of the general commerce of the world that prosperity will be secured by annexation.

But one view of the subject remains to be presented. It grows out of the proposed enlargement of our territory. From this, I am free to confess, I see no danger. The federative system is susceptible of the greatest extension compatible with the ability of the representation of the most distant State or Territory to reach the seat of government in time to participate in the functions of legislation and to make known the wants of the constituent body. Our confederated republic consisted originally of thirteen members. It now consists of twice that number, while applications are before Congress to permit other additions. This addition of new States has served to strengthen rather than to weaken the Union. New interests have sprung up, which require the united power of all, through the action of the common government, to protect and defend upon the high seas and in foreign parts. Each State commits with perfect security to that common government those great interests growing out of our relations with other nations of the world, and which equally involve the good of all the States. Its domestic concerns are left to its own exclusive management. But if there were any force in the objection it would seem to require an immediate abandonment of territorial possessions which lie in the distance and stretch to a far-off sea, and yet no one would be found, it is believed, ready to recommend such an abandonment. Texas lies at our very doors and in our immediate vicinity.

Under every view which I have been able to take of the subject, I think that the interests of our common constituents, the people of all the States, and a love of the Union left the executive no other alternative than to negotiate the treaty. The

TYLER—TYRKER

high and solemn duty of ratifying or rejecting it is wisely devolved on the Senate by the Constitution of the United States.

Tyler, LYON GARDINER, educator; born in Charles City county, Va., in August, 1853; son of President John Tyler; graduated at the University of Virginia in 1875; Professor of Belles-Lettres at William and Mary College in 1877-78; practised law in Richmond, Va., in 1882-88; elected president of William and Mary College in 1888. He is the author of *The Letters and Times of the Tylers; Parties and Patronage in the United States; Cradle of the Republic; The Contribution of William and Mary to the Making of the Union*, etc.

Tyler, MOSES CORT, clergyman; born in Griswold, Conn., Aug. 2, 1835; graduated at Yale College in 1857; studied theology at Yale and Andover; Professor of English at the University of Michigan in 1867-81; ordained in the Protestant Episcopal Church in 1883; Professor of American History at Cornell University from 1881 till his death. His publications include *History of American Literature during the Colonial Period; Manual of English Literature; Life of Patrick Henry; Three Men of Letters; The Literary History of the American Revolution; and Glimpses of England, Social, Political, and Literary*. He died in Ithaca, N. Y., Dec. 28, 1900.

Tyler, RANSOM HEBBARD, author; born in Leyden, Mass., Nov. 18, 1813. He was district attorney and county judge for Oswego county, and editor of the *Oswego Gazette*. In addition to numerous books and articles on legal subjects he wrote a series of sketches of the early settlers in Oswego county. He died at Fulton, N. Y., Nov. 27, 1881.

Tyler, ROBERT OGDEN, military officer; born in Greene county, N. Y., Dec. 22, 1831; graduated at the United States Military Academy in 1853; and was assigned to frontier duty. In April, 1861, he accompanied the expedition for the relief of Fort Sumter and was present during its bombardment on May 17. In August of that year he organized the 4th Connecticut Volunteers, and was made its colonel. Under his leadership it became one of the most efficient regiments in the army. He was appointed brigadier-gen-

eral of volunteers in November, 1862; and distinguished himself at Fredericksburg, Chancellorsville, Gettysburg, Spottsylvania, and Cold Harbor. He was brevetted major-general of volunteers and major-general, United States army, in 1865. After the war he was assigned to duty in the Quartermaster's Department at New York City, San Francisco, Louisville, Charleston, and Boston. He died in Boston, Mass., Dec. 1, 1874.

Tyndale, HECTOR, military officer; born in Philadelphia, Pa., March 24, 1821. He was not opposed to slavery and had no sympathy with the expedition of John Brown; but when Mrs. Brown was about to pass through Philadelphia on her way to claim the body of her husband after his execution, Tyndale took the risk of escorting her, and not only became the object of insults and threats, but was shot at by an unseen person. A number of Southern newspapers declared that the remains of John Brown would never be returned to his friends, but a "nigger's" body would be substituted. When the authorities offered the coffin to Tyndale he declined to accept it till it was opened and the remains identified. When the Civil War broke out Tyndale was made major of the 28th Pennsylvania Volunteers, with which he participated in thirty-three different engagements. He was brevetted major-general of volunteers in 1865. He died in Philadelphia, Pa., March 19, 1880.

Tyner, JAMES NOBLE, lawyer; born in Brookville, Ind., Jan. 17, 1826; received an academic education; admitted to the bar in 1857, and practised in Peru, Ind.; member of Congress, 1869-75; assistant Postmaster-General and Postmaster-General in 1875-82; assistant attorney-general for the Post-office Department in 1889-93 and 1897-1903. He died in Washington, D. C., Dec. 5, 1904.

Tyng, EDWARD, naval officer; born in Massachusetts about 1683; commanded the *Massachusetts* in the Cape Breton expedition in 1745, and captured the French man-of-war *Vigilante* of sixty-four guns. He died in Boston, Mass., Sept. 8, 1755.

Tyrker, the German foster-father of Leif the Scandinavian, whom he accompanied in the expedition from Iceland to the land south of Greenland in the year

TYSON—TYTLER

1000. While exploring the neighborhood Tyrker reported the discovery of vines loaded with grapes, which caused Leif to call the country Vinland.

Tyson, JACOB, legislator; member of the House of Representatives from New York, 1823 to 1825, and member of the New York State Senate from Richmond county in 1828.

Tyson, JOB ROBERTS, lawyer; born in Philadelphia, Pa., Feb. 8, 1803; admitted to the bar in 1855-57. He was the author of *Essay on the Penal Laws of Pennsylvania; The Lottery System of the United States; Social and Intellectual State of the Colony of Pennsylvania*

prior to 1743; Discourse on the 200th Anniversary of the Birth of William Penn; Report on the Arctic Explorations of Dr. Elisha K. Kane, etc. He died in Montgomery county, Pa., June 27, 1858.

Tytler, PATRICK FRASER, historian; born in Edinburgh, Scotland, Aug. 30, 1791; was educated at the University of Edinburgh; admitted to the bar in Scotland, but devoted himself to biographical and historical researches; and wrote *Sir Walter Raleigh; An Historical View of the Progress of Discovery on the Northern Coasts of America*, etc. He died in Great Malvern, England, Dec. 24, 1849.

U.

Uchee Indians, a diminutive nation, seated in the beautiful country, in Georgia, extending from the Savannah River at Augusta to Milledgeville and along the banks of the Oconee and the headwaters of the Ogeechee and Chattahoochee. They were once a powerful nation, and claimed to be the oldest on the continent. Their language was harsh and unlike that of any other; and they had no tradition of their origin, or of their ever having occupied any other territory than the domain on which they were found. They have been driven beyond the Mississippi by the pressure of civilization, and have become partially absorbed by the Creeks. Their language is almost forgotten, and the Uchees are, practically, one of the extinct nations.

Uhl, EDWIN F., lawyer; born in Avon Springs, N. Y., in 1841; taken to Michigan by his parents in 1846; graduated at the University of Michigan in 1861; began the practice of law in 1866; appointed assistant Secretary of State in 1893; was ambassador to Germany in 1896-97. He died in Grand Rapids, Mich., May 17, 1901.

Ulke, HENRY, portrait-painter; born in Frankenstein, Prussia, Jan. 29, 1821; studied under Professor Wach, in Berlin, in 1842-46; employed in fresco-painting in the Royal Museum, Berlin, in 1846-48; came to the United States in 1851; settled in Washington in 1857. His works include portraits of *General Grant*, *James G. Blaine*, *Gen. John Sherman*, *Charles Sumner*, *Secretary Edwin M. Stanton*, *Attorney-General Garland*, etc., for the United States government. He died in 1910.

Ulloa, ANTONIO DE, naval officer; born in Seville, Jan. 12, 1716; entered the Spanish navy in 1733 and became lieutenant in 1735; came to the United States as governor of Louisiana in 1766, but was

forced to leave because he failed to win over the colonists to Spain. He had command of a fleet which was sent to the Azores, with sealed orders to proceed to Havana and join an expedition against Florida. He neglected to open his orders and was tried by court-martial in 1780, and acquitted. Among his writings are: *American Notes*; *Physico-Historical Talks on South America and Eastern North America*, and *Secret Information Concerning America*, confidential reports made to the Spanish ministry. He died on the island of Leon, July 3, 1795.

Ulloa, FRANCISCO DE, explorer; born in Spain; became a lieutenant of Cortez in his explorations in America, and was left by him, in 1535, in charge of the colony of Santa Cruz. In 1539-40 he commanded the expedition that explored California, giving to the gulf the name of "Sea of Cortez," and discovered that southern California was a peninsula. He died on the Pacific coast in 1540.

Unalaska, or **Ounalaska**, an island, district, and village, in the Aleutian group, at the extremity of the Alaska peninsula; it is the most important settlement in western Alaska, and the commercial centre of all the trade in that region. It is the natural outfitting station for vessels passing between the Pacific and the Arctic oceans.

Uncas, Mohegan chief; born in the Pequot Settlement, Conn., about 1588; was originally a Pequot sachem, but about 1635 he revolted against Sassacus and gathered a band of Indians who were known by the name of Mohegans, the ancient title of his nation. He joined the English in their war with the Pequots in 1637, and received for his services a portion of the Pequot territory. When the war was over, Uncas shielded many of the Pequots from the wrath of the English, and incurred the enmity of the col-

UNCLE SAM—UNCONSTITUTIONALITY OF LAWS

onists for a time; but the white people soon gave him their confidence, and treated him with so much distinction that jealous Indians tried to assassinate him. For this treachery Uncas conquered one of the

UNCAS'S MONUMENT.

sachems in Connecticut, and in 1643 he overpowered the Narragansets and took Miantonomoh prisoner. He died in what is now Norwich, Conn., in 1682. See MIANTONOMOH; PEQUOT.

Uncle Sam, a popular name of the government of the United States. Its origin was as follows: Samuel Wilson, commonly called "Uncle Sam," was an inspector of beef and pork in Troy, N. Y., purchased for the government after the declaration of war against England in 1812. A contractor named Elbert Anderson purchased a quantity of provisions, and the barrels were marked "E. A." the initials of his name, and "U. S.," for United States. The latter initials were not familiar to Wilson's workmen, who inquired what they meant. A facetious fellow answered, "I don't know, unless they mean 'Uncle Sam. '" A vast amount of property afterwards passed through Wilson's hands, marked in the same way, and he was rallied on the extent of his possessions. The joke spread, and it was not long before the initials of the United States were regarded as "Uncle Sam," which name has been in popular parlance ever since. The song says:

"Uncle Sam is rich enough to give us all a farm."

"**Uncle Tom's Cabin**," Harriet Beecher Stowe's novel, first published as a serial in the *National Era*, in Washington, D. C., in 1850, and completed in Boston in 1852. The Rev. Josiah Henson, who died in Dresden, Ontario, Canada, May 5, 1883, at the age of ninety-three, was the original of Uncle Tom. He was a slave who was permitted to go freely from Kentucky to Ohio on his master's business, because he had given a promise that he would not attempt to escape, on a pledge of freedom at a certain time; but his master died before the appointed time and Henson was sold as a slave.

Unconstitutionality of Laws. In every government based upon a written constitution like that of the United States, and also of the separate States in the Union, there is also a body of laws enacted by the legislatures. In some instances the laws made by the legislatures are, or are claimed to be, in conflict with the written constitution. When such cases are brought into court, it is the judge or judges who must decide whether such laws are, or are not, in conflict with the written constitution. This is an inherent necessity in all cases where a State has two separate bodies of laws.

In the case of the chartered American colonies, the Privy Council of England could set aside a colonial law as being in conflict with the charter. This could also be done by the colonial courts themselves.

In the case of Holmes vs. Walton, the legislature of New Jersey had passed an act in 1779 making lawful a trial before a jury of six men. In this instance the constitutionality of the act was questioned, and it was decided to be unconstitutional by the Court of Appeals. The act was therefore repealed and a jury of twelve men substituted.

In the case of Trevett vs. Weeden in 1787, Weeden, a butcher, refused to accept from Trevett paper money in payment for meat. In Rhode Island a refusal to sell meat was a penal offence. Weeden was defended by James M. Varnum, a lawyer of talent, for some time a member of Congress.

In a forceful argument to the court, Varnum laid down principles of constitutional law of great significance, which are now recognized as fundamental and all-

UNCONSTITUTIONALITY OF LAWS

important in American jurisprudence. "The legislative," he declared, "have the uncontrollable power of making laws not repugnant to the Constitution. The judiciary have the sole power of judging those laws, and are bound to execute them; but cannot admit any act of the legislative as law which is against the Constitution." The legislative derives all its authority from the Constitution, but must not violate the Constitution, as was done by an act depriving citizens of the right to trial by jury. "This court," he said, "is under the solemn obligations to execute the laws of the land, and therefore cannot, will not consider this act as a law of the land." Inasmuch as Rhode Island was still working under its old colonial charter, and had not a new constitution plainly established by the will of the people, Varnum's contention was peculiarly bold. But the court sustained the argument, declaring that the "information was not recognizable before them." The judgment of the court plainly rejected the statute as void because contrary to the constitutional authority of the legislature.

The lawmakers, outraged by the conduct of the court, summoned the judges to appear before them. At the hearing the judges ably defended their position, contended manfully for the independence of the judiciary, and asserted the unconstitutionality of the statute. After hearing the defence, the assembly voted that it was not satisfied with the reasons given by the judges in support of their judgment; but the judges were finally allowed to leave the presence of the assembly without further reproof and without impeachment. The court had given to the public a lesson regarding sense, liberty, and the function of the judiciary in a free commonwealth. Though the decision of the court helped to restore confidence and give hope, Rhode Island for some time after this was the prey of prejudice, jealousy, and ignorance. At the next election only one of the judges of the superior court was re-elected.

In 1794 the United States Supreme Court declared a federal statute as contrary to the Constitution in the case of the United States vs. Yale Todd.

The most important early case setting aside an act of Congress was that of

Marbury vs. Madison, in which the court held a portion of the Judiciary Act of 1789 as unconstitutional.

In a bill signed by President Adams about a week before his exit from office, provision had been made for the appointment of justices of the peace for the District of Columbia. Adams nominated several persons by the Senate. The commissions were found on Marshall's desk regularly filled out and signed by the President and attested by John Marshall, who, in the last weeks of Adams's administration, served as chief-justice of the Supreme Court and Secretary of State. Levi Lincoln filled this latter office in the early days of Jefferson's term, until Madison could finish private business and assume the duties of the office. Lincoln did not deliver the commissions of those "midnight judges," as Jefferson stigmatized them, nor did Madison after him. William Marbury, one of the nominees, moved in the Supreme Court for a writ of mandamus to compel Madison to deliver the withheld commission. Congress, by postponing the session of the Supreme Court for fifteen months, put off the decision, and also, possibly, gave Marshall time to think the matter over carefully.

The chief-justice, in delivering the opinion of the court, declared, first, that Marbury had a right to the commission; second, that the refusal of the commission was a plain violation of that right for which the laws of the United States afforded Marbury a remedy. As to the remedy, however, Marshall was equally clear that the authority given to the Supreme Court in the law of 1789, establishing the judicial courts of the United States, to issue writs of mandamus to public officers, appears not to be warranted by the Constitution, on the ground that the Supreme Court has no original jurisdiction in such cases. He then proceeded at great length and in clearest language to set forth his opinion that when a law is at variance with the Constitution the court must cling to the Constitution and refuse to obey an act of Congress.

No practice of the judicial branch of the government has been of more dangerous consequence than the habit of the justices of the Supreme Court of discussing questions upon which the decision of the court

UNDERGROUND RAILROAD—UNDERWOOD

does not rest. Moreover, in this case the chief-justice was, in a manner, sitting on the validity of his own act when Secretary of State in attesting commissions which were issued in defiance of what the head of the executive branch regarded as decency and good politics. Marshall stated that the court had no jurisdiction in the case before it, and then went on to lay down the doctrine that the Supreme Court is not bound by acts of Congress or by the interpretation of its powers by the executive.

The first time that the United States Supreme Court set aside a State law was the case of the United States vs. Peters. Peters was United States District Judge, and decided the case of Olmstead vs. Ritzenhouse in favor of the plaintiff, but did not carry his judgment into execution because a statute of Pennsylvania forbade this. Judge Marshall, delivering the opinion of the court, declared that the legislature of a State could not annul the judgment, or determine the jurisdiction of a United States court. The Pennsylvania authorities violently opposed this judgment, but the decree of the court was executed.

Underground Railroad, a popular designation of the secret means by which slaves, fleeing from the slave-labor States for their liberty, escaped through the Northern States into Canada during the operation of the fugitive slave law. These secret means were various kinds of aid given to the slaves by their Northern friends. See FUGITIVE SLAVE LAW.

Underhill, JOHN, colonist; born in Warwickshire, England; was a soldier on the Continent; came to New England with Winthrop in 1630; represented Boston in the General Court; favored Mrs. Hutchinson (see HUTCHINSONIAN CONTROVERSY), and was associated with Captain Mason, in command of forces in the Pequot War, in 1637. Banished from Boston as a heretic, he went to England, and there published a history of the Pequot War, entitled *News from America*. Dover, N. H., regarded as a place of refuge for the persecuted, received Underhill, and he was chosen governor. It was discovered that it lay within the chartered limits of Massachusetts, and the latter claimed political jurisdiction over it. Underhill

treated the claim with contempt at first, but, being accused of gross immorality, he became alarmed, and not only yielded his power, but urged the people to submit to Massachusetts. He went before the General Court and made the most abject confession of the truth of the charges. He did the same publicly in the Church, and was excommunicated. He afterwards lived at Stamford, Conn., and in 1646 went to Flushing, L. I. In the war between the Dutch and Indians he commanded troops, and in 1655 he represented Oyster Bay in the assembly at Hempstead. He died in Oyster Bay, L. I., about 1672. His descendants still possess lands given to him by Indians on Long Island. See PEQUOT.

Underwood, FRANCIS HENRY, author; born in Enfield, Mass.; educated in Amherst; taught in Kentucky; and was admitted to the bar; returned to Massachusetts in 1850, and was active in the anti-slavery cause; was clerk of the State senate in 1852, assisted in the management of the *Atlantic Monthly* for two years; clerk of the Supreme Court of Boston for eleven years; United States consul to Glasgow in 1885; and wrote *Handbook of American Literature*; biographical sketches of Longfellow, Whittier, Lowell, etc. He died in Edinburgh, Scotland, Aug. 7, 1894.

Underwood, JOHN Cox, engineer; born in Georgetown, D. C., Sept. 12, 1840; graduated at Rensselaer Polytechnic Institute in 1862; served in the Confederate army as military engineer in Virginia, but was taken prisoner in 1863 and confined in Fort Warren till the close of the war. He was mayor of Bowling Green, Ky., in 1870-72; city, county, and (consulting) State engineer in 1866-75; lieutenant-governor of Kentucky in 1875-79; Grand Sire, Sovereign Grand Lodge, I. O. O. F., in 1888-90; lieutenant-general, Patriarchs Militant (I. O. O. F.) in 1885-93; major-general of the United Confederate Veterans in 1891-95; and superintendent and secretary of the Confederate Memorial Association in 1896. He published various documents; established the *Kentucky Intelligencer*; organized a publishing company in Cincinnati, O., in 1881; and issued the *Daily News*, of which he was managing editor.

UNDERWOOD

Underwood, OSCAR W., legislator; born in Louisville, Ky., May 6, 1862; was educated at the Rugby School, Louisville, and the University of Virginia, being graduated at the latter institution in 1884; settled in Birmingham, Ala., and was admitted to the bar in 1884; was chairman of the Democratic Executive Committee of the Ninth District of Alabama, and of the commission that framed the present State constitution; and was elected to Congress for the terms of 1895-1913. On the organization of the Sixty-second Congress (1911) he was made chairman of the Committee on Ways and Means, regarded by many as the most important committee of Congress and as giving its chairman the leadership of his party in the national Legislature. He was also widely mentioned as an eligible candidate for the Democratic nomination for the Presidency.

Mr. Underwood was regarded by those who knew him most intimately as an exceedingly cautious man, one who had acquired a reputation for not discussing questions he did not thoroughly understand, and whose public utterances had to do chiefly with the tariff. Early in his political career he had made his confession of tariff faith, and in 1911, when he had been named as the favorite candidate of the South for the Democratic Presidential nomination, he said:

"My creed to-day is what it was then. It is 'tariff for revenue only' with all the emphasis on the 'only.' Yes, there are protectionists here, naturally, a good many of them, but they know where I stand, and evidently they are not in the majority, or I would not have been sent back to Congress again and again. Anyhow, I don't see why the thriving industries in this district need the shelter of a high tariff wall."

Party Tariff Views.—Speaking on the Payne Tariff bill in the House of Representatives, March 25, 1909, he summed up the difference in the position of the Democratic and Republican parties on the tariff in part, as follows:

"In the preparation of a bill, the differences that exist between the two great parties are not the issue of protection against free trade, but the true issue is that one desires to write a protective tar-

iff that leans toward prohibition of imports, and the other a revenue tariff that favors fair competition. Although we occasionally find a free-trader within the ranks of the Democratic party, the great rank and file of the party do not favor the doctrine of free trade. There has never been a platform of a National Convention since the organization of the Democratic party that has advocated free-trade theories; they have always maintained the true position of the party was in favor of a tariff for revenue. There never has been a tariff bill enacted into

OSCAR W. UNDERWOOD.

law by the Democratic party that has not favored the doctrine of a tariff for revenue as opposed to a tariff levied along free-trade lines, such as the revenue laws of Great Britain.

"The true distinction between the two great parties of this country, to my mind, is the difference between a prohibitive tariff bill and a competitive tariff bill; the Republican party favors a tariff that will raise some revenue to support the government, but at the same time will prohibit the importation of as much foreign merchandise from coming into the country as is possible, and raise revenue at all, for, although the Republican party has repeatedly declared that they favor

UNIFORMS OF AMERICAN ARMY

a tariff to protect the difference in cost of production at home and abroad, they have placed their duties so greatly in excess of this amount, and in so many cases at prohibitive rates, that we are compelled to reach a conclusion that their tariff bills are written to prohibit, and not for the purpose of equalizing the difference of the cost of production; in fact, they are protecting the manufacturer in his profits, as declared in the last Republican platform. The Democratic party has always declared for a tariff for revenue.

"The real justification for a tariff can be only for the purpose of raising revenue to support the government, and adjust it on a basis that will fairly represent the difference in cost abroad and at home, if such exists, and if not, at such rates as will not prohibit the importation and be competitive. When this is done the tariff will cease to be a political issue, and it will be adjusted along business lines and improve business conditions. But as long as it is maintained to protect monopoly, and to pay political debts, it will continue to be a sore in the life of the nation."

Uniforms of the American Army. The Americans provincial troops serving with British regulars in the colonial wars were generally without uniforms; but there were exceptions. The New Jersey infantry, under Colonel Schuyler, were clad in blue cloth, and obtained the name of "The Jersey Blues." Their coats were blue faced with red, gray stockings, and buckskin breeches. The portrait of Washington, painted by Charles Wilson Peale in 1772, shows his dress as a Virginia colonel of infantry to be a blue coat faced with buff, and buff waistcoat and breeches. This was his uniform during the Revolution, and in it he appeared at the session of the Second Continental Congress (1775), indicating as John Adams said his readiness for the field in any station; and in this costume he appeared when, early in July, 1775, he took command of the army at Cambridge.

There is a political significance in the blue-and-buff-colored uniform. The coats of the soldiers of William of Orange who invaded Ireland in 1689 were blue faced with orange or buff, and this Holland in-

signia became that of the English Whigs, or champions of constitutional liberty. The American Whigs naturally adopted these colors for a military uniform. In the battle of Bunker (Breed's) Hill there were no uniformed companies. Washington prescribed a uniform for his officers on his arrival soon afterwards. Their coats were blue faced with buff, and the generals each wore a ribbon across the breast—each grade of a separate color. Field-officers wore different-colored cockades to distinguish their rank. Brown being then the color most convenient to be procured, Washington prescribed for the field-officers brown coats, the distinction between regiments to be marked by the facings. He also recommended the general adoption by the rank and file of the hunting-shirt, with trousers buttoned at the ankle. This was always the costume of the riflemen or sharpshooters; and Washington remarked that "it is a dress justly supposed to carry no small terror to the enemy, who think every such person a complete marksman." These hunting-shirts were black, white, or of neutral colors. The uniform of Washington's life-guard, organized early in the war, was a blue coat faced with buff, red waistcoat, buckskin breeches, and black felt hat bound with white tape.

The different colonies had uniformed companies in the earlier period of the struggle. The prevailing color of their coats was blue, with buff or white facings. For a long time the artillery were not uniformed, but in 1777 their regulation costume was "a dark-blue or black coat reaching to the knee and full-trimmed, the lapels fastened back, with ten open-worked buttonholes in yellow silk on the breast of each lapel, and ten large regimental yellow buttons at equal distances on each side, three large yellow regimental buttons on each cuff, and a like number on each pocket-flap; the skirts to hook back, showing the red lining; bottom of coat cut square; red lapels, cuff-linings, and standing capes; single-breasted white waistcoat with twelve small regimental buttons; white breeches, black half-gaiters, white stock, ruffled bosoms and wristlets, and black cocked hat bound with yellow; red plume and black cockade; gilt-handled small-sword, and gilt

UNIFORMS OF THE AMERICAN ARMY

epaulets." For the navy officers, blue coats with red facings, red waistcoats, blue breeches, and yellow buttons; and for its marine officers, a green coat with white facings, white breeches edged with green, white waistcoat, white buttons, silver epaulets, and black gaiters.

The distress of the American soldiers for want of clothing was at its height during their winter encampment at Valley Forge. Baron Steuben wrote: "The description of the dress is most easily given. The men were literally naked—some of them in the fullest extent of the word. The officers who had coats had them of every color and make. I saw an officer at a grand parade at Valley Forge mounting guard in a sort of dressing-gown made of an old blanket or woollen bed-cover."

The uniform of the Continental army was prescribed by a general order issued in October, 1779, by the commander-in-chief. The coat was to be blue, and the facings for infantry varied—white, buff, red, and blue. Those of the artillery and artificers were faced with scarlet, with scarlet linings, and of the light dragoons faced with white; white buttons and linings. Until this time the uniforms of the Continental army had been variegated. In the summer of 1780 Washington prescribed the uniforms of the general officers, and of the staff generally. The coats and facings were the same as those already prescribed—blue, buff, and white. The major-generals to wear two epaulets, with two stars upon each, and a black and white feather in the hat; the brigadiers a single star and a white feather; the colonels, two epaulets; the captains, an epaulet on the right shoulder; the sub-alterns, an epaulet on the left shoulder; the aides-de-camp, the uniform of their rank and corps; those of the major-generals and brigadier-generals to have a green feather in the hat; those of the commander-in-chief, a white feather. Cockades were to be worn in the hat by all military men. In the field, such of the regiments as had hunting-shirts were required to wear them.

In the summer of 1782 the uniform of the infantry and cavalry were prescribed as follows: "Blue ground, with red facings and white linings, and buttoned," the artillery and sappers and miners to

retain their uniforms. The cavalry had brass helmets, with white horse-hair. It was found difficult to procure the prescribed color for clothing, and the order was only partially complied with. White facings were generally used; the buff rarely, excepting by the general officers. At the close of the Revolution some of the colonels of infantry wore black, round hats, with black and red feathers. During the period of the Confederation the troops retained substantially the uniform of the Continental army. In 1787 the shoulder-strap of dark blue edged with red first made its appearance. In 1792 bear-skin-covered knapsacks, instead of linen painted ones, were first issued to the troops. In 1796 the infantry had dark-blue coats reaching to the knee and full-trimmed, scarlet lapels, cuffs, and standing capes, retaining white buttons, white trimmings, and white under-dress, black stocks, and cocked hats with white binding. Black top-boots now replaced the shoe and black half-gaiter. In 1794 the artillery wore helmets with red plumes. The coats of the musicians were red, with pale-blue facings, blue waistcoats and breeches, and a silk epaulet for the chief musician. This was the uniform of the drummers in the royal regiments of the British army at an early period, it being the royal livery.

The red coat was the uniform of the drummers in the American army until 1857. In 1799 the white plume was prescribed for the infantry. The cavalry had green coats and white facings, white vests and breeches, top-boots, and leather helmet with black horse-hair. In Jefferson's administration the infantry wore round ("stove-pipe") hats, with brim three inches wide, and with a strip of bear-skin across the crown. Artillery officers had gold epaulets. The infantry wore a white belt over the shoulder and across the breast, with an oval breastplate three by two and a half inches, ornamented with an eagle. In 1810 high standing collars for the coats were prescribed, and in 1812 they were ordered to "reach the tip of the ear, and in front as high as the chin would permit in turning the head." At that time many changes were made in the uniform. Officers of the general staff wore cocked hats without feathers; single-breasted blue coats with ten gilt buttons; vest and

UNION—UNION DEVICES

breeches, or pantaloons, white or buff; high military boots and gilt spurs; and waist-belts of black leather, but no sashes. The rank and file were put into blue coats, or jackets. The medical officers, whose coats had been dark blue from 1787, were put into black coats in 1812. In 1814 a portion of the army on the Niagara frontier were compelled by circumstances to change from blue to gray. In the army regulations in 1821 dark blue was declared to be the national color. President Jackson, in 1832, tried to restore the "facings" which were worn in the Revolution, but was only partially successful. When the Civil War broke out in 1861 some of the volunteer troops were dressed in gray. As the Confederates adopted the same color for their regulars, and butternut brown for their militia, the United States troops were clad in blue, with black felt hats and feathers and gilt epaulets for officers. After the close of the war the infantry coats had white edgings, stripes, and facings, and plumes of the Revolution; and the artillery the red plume, red facings, and yellow buttons of the same period. General officers alone retained buff sashes and buff-colored body-belts.

During the war between the United States and Spain (1898), and in the subsequent military operations consequent thereon the soldiers were provided with stiff-brim soft hats, leather leggings, and jackets and pantaloons made of khaki, a clay-colored linen cloth first used for military purposes by the British army in India.

Union, AMERICAN. The first official intimation that the English-American colonies were politically united was in the following resolution adopted by the second Continental Congress, June 7, 1775: "On motion, resolved, that Thursday, the 20th of July next, be observed throughout the twelve United Colonies as a day of humiliation, fasting, and prayer." After that the term "United Colonies" was frequently used; and in the Declaration of Independence the term "United States" was first used. Georgia not having sent delegates to the first and second congresses, only "twelve" were alluded to in the expression. The inhabitants of St. John's parish in Georgia, had

chosen Lyman Hall (March 21, 1775) to represent them in the Congress, and he took his seat on the third day of the session, but without the privilege of voting. The movements in St. John's soon led to the accession of Georgia to the Continental Union, making the number of colonies that carried on the war thirteen.

In the second petition of the Continental Congress to the King (July, 1775), written by John Dickinson, negotiation was thus proffered, according to Duane's proposition: "We beseech your Majesty to direct some mode by which the united applications of your faithful colonists to the throne may be improved into a happy and permanent reconciliation; and that in the mean time measures may be taken for preventing the further destruction of the lives of your Majesty's subjects, and that such statutes as more immediately distress any of your Majesty's colonies may be repealed." This was the first official announcement to the King of the union of the colonies, and their refusal to treat separately confirmed it. It was a great step towards independence. The King could not consistently receive a document from a congress whose legality he denied. They thought to have it received if the members individually signed it. Dickinson believed it would be received. He deplored one word in it—Congress—and that proved fatal to it. "It is the only word which I wish altered," he said. "It is the only word I wish to retain," was the reply of the staunch patriot Benjamin Harrison, of Virginia. Richard Penn, a proprietary of Pennsylvania and recently its governor—a loyal Englishman—was selected to bear this second petition to the throne.

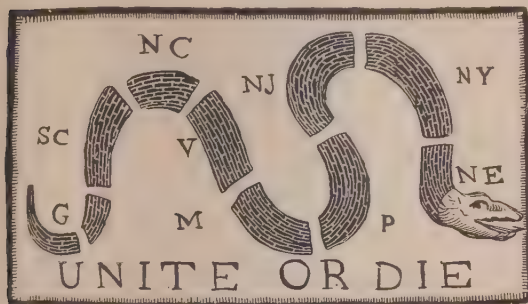

Union College, an institution of learning in Schenectady, N. Y.; established by several Christian sects in 1795, owing to which fact it received its corporate name. It was the first non-sectarian college founded in the United States. In 1873 the Dudley Observatory, the Albany Medical College, and the Albany Law School were united to the college, which was then renamed Union University.

Union Devices. When the quarrel between the British Parliament and the English-American colonies became warm, the

UNION DEVICES—UNION LEAGUE

patriotic newspapers in America, as well as handbills, bore devices emblematic of union. One was especially a favorite—namely, a snake, disjointed, each separate part representing one of the thirteen English-American colonies, with the words

warfare, and symbolizing union by grasping an endless chain. These arms all came out of the clouds, indicating that their strength was from above. Within the chain was a radiant heart, and within the heart a lighted candle, denoting the

A UNION DEVICE.

"Unite or die." This snake device first appeared when the Stamp Act excitement was at its height. John Holt, the patriotic publisher of the *New York Journal*, varied it after the adjournment of the first Continental Congress in 1774. He had a column standing upon Magna Charta, and firmly grasped, as a pillar indicating inalienable rights, by twelve hands, representing the twelve colonies (Georgia not having had a representative in that Congress). The hands belonging to bare arms coming out of the clouds, denoting heavenly

strength. The whole was surrounded by a large serpent, perfect, and in two coils, on whose body were the following words:

A UNION DEVICE.

strength. The whole was surrounded by a large serpent, perfect, and in two coils, on whose body were the following words:

"United, now, alive and free,
Firm on this basis Liberty shall stand,
And, thus supported, ever bless our land,
Till time becomes eternity."

After the Declaration of Independence a print appeared in London with a device combining a part of Holt's (the hands, thirteen of them), but instead of bare arms they were heavily mailed, denoting

that the Americans stood manfully, in broad daylight, before the world in defence of their rights, and invited the closest scrutiny of their conduct.

Union-Jack. The original flag of England was the banner of St. George—i. e., white with a red cross, which, April 12, 1606 (three years after James I. ascended the throne), was incorporated with the banner of Scotland—i. e., blue with a white diagonal cross. This combination obtained the name of "Union-Jack," in allusion to the union with Scotland; and the word jack is considered a corruption of the word Jacobus, Jacques, or James. This arrangement continued until the union with Ireland, Jan. 1, 1801, when the banner of St. Patrick—i. e., white with a diagonal red cross, was amalgamated with it, and forms the present British union flag. The union-jack of the United States, or American jack, is a blue field with white stars, denoting the union of the States. It is without the fly, which is the part composed of alternate stripes of white and red.

Union League, a patriotic organization of clubs established in the principal Northern cities during the Civil War. Any person who had the right to vote and could affirm "absolute and unqualified loyalty to the government of the United States," was eligible to membership.

UNITARIANS—UNITED COLONIES OF NEW ENGLAND

Unitarians, frequently termed Socinians. In America Dr. James Freeman, of King's Chapel, Boston, in 1783 removed from the *Prayer Book of Common Prayers* all reference to the Trinity or Deity and worship of Christ. In 1801 the Plymouth Church declared itself Unitarian. The American Unitarian Association was formed May 24, 1825. The Western conference organized 1852, and a national Unitarian conference April 5, 1865. A special report of the federal Bureau of the Census on *Religious Bodies* (1910) shows 461 organizations; 70,542 communicants, 463 church edifices, and 23 halls; church property valued at \$14,263,277; 541 ministers; and 364 Sunday-schools with 3,592 officers and teachers and 24,005 scholars.

United American Mechanics, JUNIOR ORDER OF, a fraternal organization in the United States, founded in 1853; reported in 1910, State councils, 33; sub-councils, 2,400; members, 210,000; benefits disbursed since organization, \$5,500,000; benefits disbursed in 1910, \$760,000.

United American Mechanics, ORDER OF, a fraternal organization in the United States, founded in 1846; reported in 1910, national council, 1; State councils, 18; sub-councils, 673; members, 46,217; benefits disbursed last fiscal year, \$112,775.

United Brethren in Christ, a religious sect established in the United States by William Otterbein and Martin Böhm. The first meeting was held in 1789 in Baltimore, Md. The first general conference was held in 1815, when a Confession of Faith was adopted. A special report of the federal Bureau of the Census on *Religious Bodies* (1910) shows 3,732 organizations; 274,649 communicants or members; 3,410 church edifices and 191 halls; church property valued at \$8,401,539; 1,935 ministers; and 3,409 Sunday-schools, with 37,993 officers and teachers and 278,764 scholars.

United Brethren in Christ, OLD CONSTITUTION, a religious body formerly a part of the UNITED BRETHREN IN CHRIST (*q. v.*); but, owing to an act of the general conference in 1885 appointing a commission to revise the Confession of Faith, Bishop Milton Wright and eleven delegates withdrew and formed an independent organization. The census report

already quoted showed for this denomination, 572 organizations in thirty-one conferences; 21,401, communicants; 490 church edifices and 64 halls; church property valued at \$672,252; 500 ministers; and 461 Sunday-schools, with 4,176 officers and teachers and 22,556 scholars.

United Colonies, THE. The second Continental Congress assembled at Philadelphia on May 10, 1775. The harmony of action in that body, and the important events in the various colonies which had been pressed upon their notice, made the representatives feel that the union was completed, notwithstanding Georgia had not yet sent a delegate to the Congress. Recognizing this fact, the Congress, on June 7, in ordering a fast, "Resolved, that Thursday, July 20 next, be observed throughout the Twelve United Colonies as a day of humiliation, fasting, and prayer." When, exactly one year later, a resolution declaring these colonies "free and independent States" was adopted, the committee to draft a declaration to that effect entitled the new government The United States of America.

United Colonies of New England. In May, 1643, delegates from Connecticut, New Haven, Plymouth, and Massachusetts assembled at Boston to consider measures against the common danger from the Dutch in Manhattan and the Indians. Delegates were not invited from Rhode Island, for that colony was considered "schismatic." When it asked for admission, it was refused, unless it would acknowledge allegiance to Plymouth. Then it applied for a charter, and obtained it in 1644 (see RHODE ISLAND). A confederacy was formed under the above title, and continued for more than forty years (1643-1686), while the government of England was changed three times during that period. It was a confederacy of States like our early union (see ARTICLES OF CONFEDERATION), and local supreme jurisdiction was jealously reserved by each colony. Thus early was the doctrine of State supremacy developed (see STATE SOVEREIGNTY). The general affairs of the confederacy were managed by a board of commissioners consisting of two church members from each colony. They had no executive power, nor supreme legislative

UNITED EMPIRE LOYALISTS—"UNITED STATES"

power. Their propositions were referred to and finally acted upon by the several colonies, each assuming an independent sovereignty. But war was not to be declared by one colony without the consent of this congress of commissioners, to whose province Indian affairs and foreign relations were especially consigned. The commissioners of Massachusetts, representing the most powerful colony of the league, and assuming to be a "perfect republic," claimed precedence, which the others readily conceded. New Haven was the weakest member of the league, Plymouth next. Fort Saybrook, at the mouth of the Connecticut River, was yet an independent settlement. See SAYBROOK, FORT.

United Empire Loyalists, the name assumed by societies of British loyalists who, after the Revolutionary War, were banished from the United States and had their estates confiscated. They were believed to number over 30,000, and many of them settled in Canada, Nova Scotia, and New Brunswick.

United Labor Party, a political organization in the United States which grew out of several labor societies. From the same source was also developed the National Union Labor party. Many members of these two parties were formerly identified with the Greenback-Labor party. In the Presidential campaign of 1888 the United Labor party nominated R. H. Cowdry (Ill.) for President and W. H. T. Wakefield (Kan.) for Vice-President, and this ticket received 2,808 popular votes. The National Union Labor party nominated Alson J. Streeter (Ill.) for President and C. E. Cunningham (Ark.) for Vice-President, and this ticket received 148,105 popular votes, both parties receiving support from the same source. In the Presidential campaigns of 1892, 1896, 1900, 1904, and 1908, neither of these parties appeared under their former names, but in each year a Social Labor party made nominations and received popular votes of 21,164, 36,274, 39,537, 31,249, and 13,825, respectively.

United Presbyterians. The United Presbyterian Church of North America was formed in May, 1858, by the union of the Associated Presbyterian Church and

Associate Reformed Presbyterian Church, and their first general assembly met at Xenia, O., in May, 1859. The special report of the federal Bureau of the Census on *Religious Bodies* (1910) shows 968 organizations, 130,342 communicants, 984 church edifices, and 19 halls; church property valued at \$10,760,208; 994 ministers; and 991 Sunday-schools, with 12,841 officers and teachers and 115,963 scholars.

"**United States**," THE, a frigate of the American navy, built in Philadelphia, Pa., in 1797. On Oct. 10, 1812, Commodore Rodgers sailed from Boston in the *President*, accompanied by the *United States*, forty-four guns, Captain Decatur, and the *Argus*, sixteen guns, Lieutenant-commandant Sinclair, leaving the *Hornet* in port. The *President* parted company with her companions on Oct. 12, and on the 17th captured a British packet. The *United States* and the *Argus* also parted company, the former sailing to the southward and eastward in search of British West Indiamen. At dawn, on Sunday morning, the 25th, the watch at the main-top of the *United States* discovered a sail to windward—an English ship-of-war. Decatur spread all his sails and gave chase, and the *United States* drew nearer and nearer the British ship. At about 9 A.M. Decatur had got so near that he opened a broadside upon the strange vessel, with much effect. It was responded to in kind. They continued the fight by a heavy and steady cannonade with the long guns of each.

In the course of half an hour the British vessel was fearfully injured, and her commander, perceiving that her only safety from destruction was to engage in close action, drew up to the *United States* for that purpose. The latter, with splendid gunnery, sent shots which cut her enemy's mizzen-mast so that it fell overboard. Very soon her main and fore top-masts were gone and her fore-mast was tottering. Her main-mast was severely damaged.

THE UNITED STATES CONSTITUTION AND ITS MAKERS

while the *United States* remained almost unhurt. Decatur bore away for a while, and his antagonist, supposing his vessel, badly crippled, was withdrawing, set up an exulting shout. To their astonishment, the *United States* tacked and brought up in a position of greater advantage than before. The British commander, perceiving that longer resistance would be useless, struck his colors and surrendered.

The captured vessel was the British frigate *Macedonian*, thirty-eight guns,

Decatur returned to the United States, arriving off New London Dec. 4, 1812. The *Macedonian*, in charge of Lieutenant Allen, arrived at Newport Harbor at about the same time. At the close of the month both vessels passed through Long Island Sound, and on Jan. 1, 1813, the *Macedonian* was anchored in the harbor of New York, where she was greeted as "a New Year's gift." "She comes with the compliments of the season from old Neptune," said one of the newspapers. The boys

DECATUR'S MEDAL.

Capt. J. S. Carden. She had received no less than 100 round shot in her hull, many of them between wind and water, and she had nothing standing but her fore and main masts and fore-yard. All her boats were rendered useless but one. Of her officers and men—300 in number—thirty-six were killed and sixty-eight were wounded. The loss of the *United States* was five killed and six wounded. The *Macedonian* was a new ship, and though rated at thirty-eight, carried forty-four guns. The action occurred not far from the island of Madeira. After the contest

in the streets were singing snatches of a song:

"Then quickly met our nation's eyes,
The noblest sight in nature,
A first-rate frigate as a prize,
Brought home by brave Decatur."

The national Congress thanked him and gave him a gold medal.

THE UNITED STATES CONSTITUTION AND ITS MAKERS

In Volume III. of this work will be found a history of the *Constitution of the United States* (q. v.), with a full list of all the members from the twelve colonies,

whether serving or not, and showing which members signed the Constitution. Rhode Island was not represented in the convention.

THE UNITED STATES CONSTITUTION AND ITS MAKERS

The following article by Senator HENRY CABOT LODGE (*q. v.*), published in *The North American Review* for July, 1912, was first delivered as an address before The Literary and Historical Association of North Carolina at Raleigh, North Carolina, November 28, 1911.

A little less than twenty-five years ago great crowds thronged the streets of Philadelphia. Men and women were there from all parts of the United States; the city was resplendent with waving flags and brilliant with all the decorations which ingenuity could suggest, while the nights were made bright by illuminations which shone on every building. Great processions passed along the streets, headed by troops from the thirteen original States, marching in unusual order, with Delaware at the head, because that little State had been the first to accept the great instrument of government which now, having attained its hundredth year, was celebrated in the city of its birth. Behind the famous hall where independence was declared an immense crowd listened to commemorative speakers, and the President of the United States, a Democrat, honored the occasion with his presence and his words.

Two years later, in 1889, the same scenes were repeated in New York. Again the cannon thundered, and again flags waved above the heads of the multitude gathered in the streets, through which marched a long procession, both military and civil, headed as before by the representatives of the original thirteen States. Again, at a great banquet, addresses were delivered, and once more the President of the United States, this time a Republican, honored the occasion by his presence and in the name of all the people of the country praised the great work of our ancestors.

In Philadelphia we celebrated the one-hundredth anniversary of the formation of the Constitution of the United States. In New York we commemorated the one-hundredth anniversary of the inauguration of the government which that Constitution had brought into being. Through all the rejoicings of those days, in every spoken and in every written word, ran one unbroken strain of praise for the great

instrument and of gratitude to the men who, in the exercise of the highest wisdom, had framed it and brought it forth. All men recalled that it had made a nation from thirteen jarring States; that it had proved in its interpretation flexible to meet new conditions and strong to withstand injustice and wrong; that it had survived the shock of civil war; and that under it liberty had been protected and order maintained. The pæan of praise rose up from all parts of this broad land unmarred by a discordant note. Every one agreed with Gladstone's famous declaration that the Constitution of the United States was the greatest political instrument ever struck off on a single occasion by the minds of men. We seemed, indeed, by all we then said and did, to justify those foreign critics who reproached us for our blind reverence for our Constitution and our almost superstitious belief in its wisdom and unexampled perfections.

Those celebrations of the framing of the Constitution and of the inauguration of the government have been almost forgotten. More than twenty years have come and gone since the cheers of the crowds which then filled the streets of New York and Philadelphia—since the reverberations of the cannon and the eloquent voices of the orators died away into silence. And with those years, not very many after all, a change seems to have come in the spirit which at that time pervaded the American people from the President down to the humblest citizen in the land. Instead of the universal chorus of praise and gratitude to the framers of the Constitution the air is now rent with harsh voices of criticism and attack, while the vast mass of the American people, still believing in their Constitution and their government, look on and listen, bewildered and confused, dumb thus far from mere surprise, and deafened by the discordant outcry so suddenly raised against that which they have always revered and held in honor. Many excellent persons believe apparently that beneficent results can be attained by certain proposed alterations in the Constitution, often without examination of the history and theory of government and without measuring the extent or weighing the meaning of the changes which are urged upon us. But

THE UNITED STATES CONSTITUTION AND ITS MAKERS

it is also true that every one who is in distress, or in debt, or discontented, now assails the Constitution merely because such is the present passion. All the reformers of other people's misdeeds—all of that numerous class which is ever seeking to promote virtue at somebody else's expense—pause in their labors to point out the supposed shortcomings of our National Charter. Every raw demagogue, every noisy agitator, incapable of connected thought and seeking his own advancement by the easy method of appealing to envy, malice, and all uncharitableness—those unlovely qualities in human nature which so readily seek for gratification under the mask of high-sounding and noble attributes—all such people now lift their hands to tear down or remake the Constitution. In House and Senate one can hear attacks upon it at any time and listen to men deriding its framers and their work. No longer are we criticized by outsiders for having a superstitious reverence for our Constitution. Quite recently an article by an English member of Parliament (Mr. L. T. Hobhouse), a Liberal, I believe, with Socialist proclivities, declared that this reproach of an undue veneration for the Constitution ought no longer to be brought against us, because beneficent and progressive spirits were already beginning to pull it to pieces and were seeking to modernize it in conformity with the clamor of the moment. All this is quite new in our history. We have as a people deeply revered our Constitution. We have realized what it has accomplished and what protection it has given to ordered freedom and individual liberty. Even the Abolitionists, when they denounced the Constitution for the shelter which it afforded to slavery, did not deny its success in other directions, and their hostility to the Constitution was one of the most deadly weapons used against them.

The enmity to the Constitution and the attacks upon it which have developed in the last few years present a situation of the utmost gravity. If allowed to continue without answer they may mislead public opinion and produce the most baneful results. The people of the United States may come to believe that all these attacks are, in a measure at least, true.

And therefore if they are not true their falsity ought to be shown. Beside the question of the maintenance or destruction of the Constitution of the United States all other questions of law and policy sink into utter insignificance. In its presence party lines should disappear and all sectional differences melt away like the early mists of dawn before the rising sun. The Constitution is our fundamental law. Upon its provisions rests the entire fabric of our institutions. It is the oldest of written constitutions. It has served as a model for many nations both in the Old World and in the New. It has disappointed the expectations of those who opposed it, convinced those who doubted, and won a success beyond the most glowing hopes of those who put faith in it. Such a work is not to be lightly cast down or set aside, or, which would be still worse, remade by crude thinkers and by men who live only to serve and flatter in their own interest the emotion of the moment. We should approach the great subject as our ancestors approached it—simply as Americans with a deep sense of its seriousness and with a clear determination to deal with it only upon full knowledge and after the most mature and calm reflection. The time has come to do this, not only here and now, but all over the country.

Let us first consider who the men were who made the Constitution and under what conditions they worked. Then let us determine exactly what they meant to do—a most vital point, for much of the discussion to which we have been treated thus far has proceeded upon a complete misapprehension of the purpose and intent of the framers of the Constitution. Finally, let us bring their work and their purposes to the bar of judgment, so that we may decide whether they have failed, whether in their theory of government they were right or wrong then and now, or whether their work has stood the test of time, is broad, based on eternal principles of justice, and, if rent or mangled or destroyed, would not in its ruin bring disaster and woes inestimable upon the people who shall wreck their great inheritance and, like

"The base Indian, throws a pearl away,
Richer than all his tribe."

THE UNITED STATES CONSTITUTION AND ITS MAKERS

First, then, of the men who met in Philadelphia in May, 1787, with doubts and fears oppressing them, but with calm, high courage, and with a noble aspiration to save their country from the miseries which threatened it, to lead it out from the wilderness of distractions in which it was wandering blind and helpless, into the light, so that the chaos, hateful alike to God and men, might be ended and order put in its place. It is the fashion just now to speak of the framers of the Constitution as worthy, able, and patriotic persons whom we are proud to have embalmed in our history, but toward whom no enlightened man would now think of turning seriously for either guidance or instruction, so thoroughly has everything been altered and so much has intelligence advanced. It is commonly said that they dealt wisely and well with the problems of their day, but that of course they knew nothing of those which confront us and that it would be worse than folly to be in any degree governed by the opinions of men who lived under such wholly different conditions. It would seem that this view leaves something to be desired and is not wholly correct or complete. Certainly all wisdom did not die with our fathers, and equally it was not born yesterday, and a study of history tends to make a man give more weight to the teachings of the past than it is now thought they deserve. Surely there is something to be learned from the men who established the government of the United States, and their opinions, the result of much and deep reflection, cannot be without value even to the wisest among us.

On questions of this character their ideas and conclusions are not lightly to be put aside; for, after all, however much we may now gently patronize them as good old patriots long since laid in their honored graves, they were none the less very remarkable men, who would have been eminent in any period of history, and might even, if alive now, attain to distinction. Let us glance over the list of delegates to the Constitutional Convention in Philadelphia in 1787. To begin with, that their average age was forty-three, which is not an extreme senectitude, and the ages range from Franklin, who

was eighty-one, to John Francis Mercer, of Virginia, who was twenty-eight. Among the older men who were conspicuous in the convention were Franklin, with his more than eighty years; Washington, who was fifty-five; Roger Sherman, who was sixty-six; and Mason and Wythe, of Virginia, who were both sixty-one. But when I looked to see who were the most active forces in that convention I found that the New Jersey plan was brought forward by William Paterson, who was forty-two; that the Virginia plan was proposed by Edmund Randolph, who was thirty-four; while Charles Pinckney, of South Carolina, whose plan played a large part in the making of the Constitution, was only twenty-nine. The greatest single argument, perhaps, which was made in the convention was that of Hamilton, who was thirty. The man who contributed more, possibly, than any other to the daily labors of the convention and who followed every detail was Madison, who was thirty-six. The Connecticut compromise was very largely the work of Ellsworth, who was forty-two; and the committee on style, which made the final draft, was headed by Gouverneur Morris, who was thirty-five. Let us note, then, at the outset, that youth and energy, abounding hope, and the sympathy for the new times stretching forward into the great and uncharted future, as well as high ability, were conspicuous among the men who framed the Constitution of the United States.

Their presiding officer was Washington, one of the great men of all time, who had led the country through seven years of war, and of whom it has been said by an English historian that "no nobler figure ever stood in the forefront of a nation's life." Next comes Franklin, the great man of science, the great diplomatist, the great statesman and politician, the great writer: one of the most brilliant intellects of the eighteenth century, who in his long life had known cities and men as few others have ever known them. There was Hamilton, one of the greatest constructive minds that modern statesmanship has to show, to whose writings German statesmen turned when they were forming their Empire forty years ago and about whom in these later days books

THE UNITED STATES CONSTITUTION AND ITS MAKERS

are written in England, because Englishmen find in the principal author of the *Federalist* the great exponent of the doctrines of successful federation. There, too, was Madison, statesman and law-maker, wise, astute, careful, destined to be, under the government which he was helping to make, Secretary of State and President. Roger Sherman was there, sagacious, able, experienced; one of the leaders of the Revolution and signer of the Declaration of Independence, as he was of the Constitution. Great lawyers were present in Philadelphia in that memorable summer of 1787, such men as Ellsworth and Wilson and Mason and Wythe. It was, in a word, a very remarkable body which assembled to frame a constitution for the United States. Its members were men of the world, men of affairs, soldiers, lawyers, statesmen, diplomats, versed in history, widely accomplished, deeply familiar with human nature. So without an undue or slavish reverence for the past or for the men of a former generation, we may fairly say that in patriotism and in intellect, in knowledge, experience, and calmness of judgment, these framers of the Constitution compare not unfavorably with those prophets and thinkers of to-day who decry the work of 1787, would seek to make it over with all modern improvements, and who with unconscious humor declare that they are engaged in the restoration of popular government.

That phrase is in itself suggestive. That which has never existed cannot be restored. If popular government is to be restored in the United States it must have prevailed under the Constitution as it is, and yet those, who just now are so devoured by anxiety for the rights of the people, propose to effect the restoration they demand by changing the very Constitution under which popular government is admitted by their own words to have existed. I will point out presently the origin of this confusion of thought. It is enough to say now that for more than a century no one questioned that the government of the Constitution was in the fullest sense a popular government. In 1863 Lincoln, in one of the greatest speeches ever uttered by man, declared that he was engaged in trying to save

government by the people. Nearly thirty years later, when we celebrated the one-hundredth anniversary of the Constitution, the universal opinion was still the same. All men then agreed that the government which had passed through the fires of civil war was a popular government. Indeed, this novel idea of the loss of popular government which it is proposed to restore by mangling the Constitution under which it has existed for more than a century is very new—in fact, hardly ten years old.

This first conception of our Constitution as an instrument of popular government, so long held unquestioned, was derived from the framers of the Constitution themselves. They knew perfectly well that they were founding a government which was to be popular in the broadest sense. The theory now sedulously propagated, that these great men did not know what they were about, or were pretending to do one thing while they really did another, is one of the most fantastic delusions with which agitators have ever attempted to mislead or perplex the public mind. The makers of the Constitution may have been right or they may have been wrong in the principles upon which they acted or in the work they accomplished, but they knew precisely what they meant to do and why they did it. No man in history ever faced facts with a clearer gaze than George Washington, and when, after the adjournment of the convention, he said, "We have raised a standard to which the good and wise can repair; the event is in the hands of God," he labored under no misapprehension as to the character of the great instrument where his name led all the rest.

It is the fashion to say that since then great changes have occurred and wholly new conditions have arisen of which the men of 1787 could by no possibility have had any knowledge or anticipation. This is quite true. They could not have foreseen the application of steam to transportation, or of electricity to communication, which have wrought greater changes in human environment than anything which has happened to man since those dim, prehistoric, unrecorded days when some one discovered the control of fire, invented the wheel, and de-

THE UNITED STATES CONSTITUTION AND ITS MAKERS

vised the signs for language, masterpieces of intelligence with which even the marvels of the last century cannot stand comparison. The men of the Constitution could as little have foreseen what the effects of steam and electricity would be as they could have anticipated the social and economic effects of these great inventions or the rapid seizure of the resources of nature through the advances of science and the vast fortunes and combinations of capital which have thus been engendered. Could they, however, with prophetic gaze have beheld in a mirror of the future all these new forces at work, so powerful as to affect the very environment of human life, even then they would not, one thinks, have altered materially the Constitution which they were slowly and painfully perfecting. They would have kept on their way, because they would have seen plainly what is now too often overlooked and misunderstood, that all the perplexing and difficult problems born of these inventions and of the changes, both social and economic, which have followed were subjects to be dealt with by laws as the questions arose, and laws and policies were not their business. They were not making laws to regulate or to affect either social or economic conditions. Their work was not only higher, but far different. They were laying down certain great principles upon which a government was to be built and by which laws and policies were to be tested as gold is tested by a touchstone.

Upon the work in which they were engaged social and economic changes or alterations in international relations and political conditions, no matter how profound or unforeseen—and none could have been more profound or more unforeseen than those which have actually taken place—had little bearing or effect. They were framing a government, and human nature was the one great and controlling element in their problem. Human nature, with its strength and its weakness, its passions and emotions so often dominating its reason, its selfish desires and its nobler aspirations, was the same then as now. There is no factor so constant in human affairs as human nature itself, and in its essential attributes it is the same to-day as it was among the builders of the

Pyramids. As to the principles of government which the framers of the Constitution wished to adapt to that portion of human nature which had gained a foothold on the North American Continent there was little to be discovered. There is no greater fallacy than to suppose that new and fundamental principles of government are constantly to be invented and wrought out. Laws change and must change with the march of humanity across the centuries as its alteration finds in the conditions about it, but fundamental principles and theories of government are all extremely old. The very words in which we must express ourselves when we speak of forms of government are all ancient. Let me recall a few facts which every school-boy knows and which any one can obtain by indulging in that too much neglected exercise of examining a dictionary. Anarchy, for example, is the Greek word "rule" or "command" with the alpha privative in the form of "an" prefixed and means the state of a people without government. Monarchy is the rule of one; oligarchy is the rule of a few. We cannot state what our own government is without using the word "democracy," which is merely the Greek word *δημοκρατία* and means popular government or the rule of the people. Aristocracy, ideally as Aristotle had it, is the rule of the best, but even in those days it meant in practice the rule of the best-born or nobles. Plutocracy is the rule of the rich; autocracy, self-derived power—the unlimited authority of a single person. Ochlocracy is the rule of the multitude, for which we have tried to substitute the hideous compound "mobocracy." As with the words, so with the things of which the words are the symbol; the people who invented the one had already devised the other. The words all carry us back to Greece, and all these various forms of government were well known to the Greeks and had been analyzed and discussed by them with a brilliancy, a keenness, and an intellectual power which have never been surpassed. If you will read *The Republic* and *The Laws of Plato*, and supplement that study by an equally careful examination of what Aristotle has to say on government, you will find that those great

THE UNITED STATES CONSTITUTION AND ITS MAKERS

minds have not only influenced human thought from that time to this, but that there is little which they left unsaid. It is the fashion, for example, to speak of Socialism as if it were something new, a radiant discovery of our own time which is to wipe away all tears. The truth is that it is very old, as old in essence as human nature, for it appeals to the strong desire in every man to get something for nothing and to have some one else bear his burdens and do his work for him. As a system it is amply discussed by Plato, who, in *The Republic*, urges measures which go to great extremes in this direction. In the fourth century of our era a faction called the Circumcellions were active as Socialists and caused great trouble within the weakening Empire of Rome. The real difficulty historically with the theories of Socialism is not that they are new, but that they are very, very old, and wherever they have been put in practical operation on a large scale they have resulted in disorder, retrogression, and in the arrest of civilization and progress. Broadly stated, there have been only two marked additions to theories or principles of government since the days of the Greeks and the Romans. One is the representative principle developed by the people of England in the "Mother of Parliaments," and now spread all over the world, and the other is the system of federation on a large scale embracing under a central government of defined powers a union of sovereign and self-governing states which the world owes in its bold and broad application to the men who met at Philadelphia to frame our Constitution in 1787.

With these exceptions the framers of the Constitution dealt with the theories and systems of government which have been considered, discussed, and experimented with for more than two thousand years, and which are to-day, a century later, the same as in 1787, unchanged and with no additions to their number. In order to reach the essence of what the makers of the Constitution tried and meant to do, which it is most important to know and reflect upon deeply before we seek to undo their work, let us begin by dismissing from our consideration all that is unessential or misleading. Let us

lay aside first the word republic, for a republic denotes a form, and not a principle. A republic may be democratic like ours, or an autocracy like that of Augustus Cæsar, or an oligarchy like Venice, or a changing tyranny like some of those visible in South America. The word has become as inaccurate, scientifically speaking, as the word monarchy, which may be in reality a democracy as in England or Norway, constitutional as in Italy, or a pure despotism as in Russia. Let us adhere in this discussion to the scientifically exact word "democracy." Next let us dismiss all that concerns the relations of the States to the national government. Federation, as has been said, was the great contribution of the Philadelphia convention to the science of government. The framers of the Constitution, if they did not invent the principle, applied it on such a scale and in such a way that it was practically a discovery, a venture both bold and new, as masterly as it was profoundly planned. With the love of precedents characteristic of their race they labored to find authority and example in such remote and alien arrangements as the Achean League and the Amphictyonic Council, but the failure of these precedents as such was the best evidence of the novelty and magnitude of their own design. Their work in this respect has passed through the ordeal of a great war; it has been and is to-day the subject of admiration and study on the part of foreign nations, and not even the most ardent reformer of this year of grace would think, in his efforts to restore popular government, of assailing the Union of Sovereign States. Therefore we may pass by this great theme which was the heaviest part of the task of our ancestors.

In the same way we may dismiss, much as it troubled the men of 1787, all that relates to the machinery of government, such as the electoral college, the tenure of office, the methods of electing Senators and Representatives, and the like. These matters are important; many active thinkers in public life seek to change them, not for the better, but none the less these provisions concern only the mechanism of government; they do not go to the root of the matter, they do not

THE UNITED STATES CONSTITUTION AND ITS MAKERS

affect the fundamental principles on which the government rests.

By making these omissions we come now to the vital point, which is, What kind of a government did the makers of the Constitution intend to establish, and how did they mean to have it work? They were, it must be remembered, preparing a scheme of government for a people peculiarly fitted to make any system of free institutions work well. The people of the United Colonies were homogeneous. They came in the main from Great Britain and Ireland, with the addition of the Dutch in New York, of some Germans from the Palatinate, and of a few French Huguenots, whose ability and character were as high as their numbers were relatively small. But an overwhelming majority of the American people in 1787 were of English and Scotch descent, and they, as well as the others from other lands, were deeply imbued with all those principles of law which were the bulwarks of English liberty. In this new land men had governed themselves, and there was at that moment no people on earth so fit for or so experienced in self-government as the people of the Thirteen Colonies. Their colonial governments were representative and in essence democratic. They became entirely so when the Revolution ended and the last English governor was withdrawn. In the four New England Colonies local government was in the hands of the town meetings, the purest democracies then or now extant, but it is best to remember, what the men of 1787 well knew, that these little democracies moved within fixed bounds determined by the laws of the States under which they had their being.

For such a people, of such a character, with such a past and such habits and traditions, only one kind of government was possible, and that was a democracy. The makers of the Constitution called their new government a republic, and they were quite correct in doing so, for it was of necessity republican in form. But they knew that what they were establishing was a democracy. One has but to read the debates to see how constantly present that fact was to their minds. Democracy was then a very new thing in the modern world. As a system it had

not been heard of, except in the fevered struggles of the Italian city republics, since the days of Rome and Greece, and, although the convention knew perfectly well that they were establishing a democracy and that it was inevitable that they should do so, some of them regarded it with fear and all with a deep sense of responsibility and caution. The logical sequence as exhibited in history and as accepted by the best minds of the eighteenth century, struggling to give to men a larger freedom, was democracy—anarchy—despotism. The makers of the Constitution were determined that so far as in them lay the American Republic should never take the second step, never revolve through the vicious circle which had culminated in empire in Rome, in the tyrants of the Grecian and the despots of the Italian cities, which in their turn had succumbed to the absolutism of foreign rulers.

The vital question was how should this be done; how should they establish a democracy with a strong government—for after their experience of the confederation they regarded a weak government with horror—and at the same time so arrange the government that it should be safe as well as strong and free from the peril of lapsing into an autocracy on the one hand, or into disorder and anarchy on the other? They did not try to set any barrier in the way of the popular will, but they sought to put effective obstacles in the path to sudden action which was impelled by popular passion, or popular whim, or by the excitement of the moment. They were the children of the "Great Rebellion" and the "Blessed Revolution" in the England of the seventeenth century, and they were steeped in the doctrine of limiting the power of the King. But here they were dealing with a sovereign who could not be limited, for while a king can be limited by transferring his power to the people, when the people are sovereign their powers cannot be transferred to anybody. There is no one to transfer them to, and if they are taken away the democracy ceases to exist and another government, fundamentally different, takes its place.

The makers of the Constitution not only knew that the will of the people

THE UNITED STATES CONSTITUTION AND ITS MAKERS

must be supreme, but they meant to make it so. That which they also aimed to do was to make sure that it was the real will of the people which ruled, and not their momentary impulse; their well-considered desire and determination, and not the passion of the hour, the child, perhaps, of excitement and mistake inflamed by selfish appeals and terrorized by false alarms. The main object, therefore, was to make it certain that there should be abundant time for discussion and consideration, that the public mind should be thoroughly and well informed, and that the movements of the machinery of government should not be so rapid as to cut off due deliberation. With this end in view they established with the utmost care a representative system with two chambers and an executive of large powers, including the right to veto bills. They also made the amendment of the Constitution a process at once slow and difficult, for they intended that it should be both, and indeed that it should be impracticable without a strong, determined, and lasting public sentiment in favor of change.

Finally, they established the federal judiciary, and in the Supreme Court of the United States they made an addition to the science of government second only in importance to their unequalled work in the development of the principle of federation. That great tribunal has become in the eyes of the world the most remarkable among the many remarkable solutions devised by the Convention of 1787 for the settlement of the gravest governmental problems. John Marshall, with the intellect of the jurist and the genius of the statesman, saw the possibilities contained in the words which called the court into being. By his interpretation and that of his associates and their successors the Constitution attained to flexibility and escaped the rigidity which then and now is held up as the danger and the defect of a written instrument. In their hands the Constitution has been expanded to meet new conditions and new problems as they have arisen. In their hands also the Constitution has been the protection of the rights of States and the rights of men, and laws which violated its principles and its provisions have been set aside,

By making the three branches of the government—the executive, the legislative, and the judicial—entirely separate and yet co-ordinate, and by establishing a representative system and creating a Supreme Court of extraordinary powers, the framers of the Constitution believed that they had made democracy not only all-powerful, but at the same time safe, and that they had secured it from gradual conversion into autocracy, on the one hand, and from destruction by too rapid motion and too quick response to the passions of the moment, on the other. If ever men were justified by results, they have been. The Constitution in its development and throughout our history has surpassed the hopes of its friends and utterly disappointed the predictions and the criticisms of its foes. Under it the United States has grown into the mighty republic we see to-day. New States have come into the Union, vast territories have been acquired, population and wealth have increased to a degree which has amazed the world, and life, liberty, and property have been guarded beneath the flag which is at once the symbol of the country and of the Constitution under which the nation has risen to its high success. Such results would seem to be a potent argument in favor of the instrument of government through which they have been achieved. But to argue from results seems just now out of fashion. Actual accomplishment, it would appear, is nothing. According to the new dispensation, our decision must be made on what is promised for the future, not on what has been done in the past. Under this novel doctrine we are to be guided only by envy and discontent and are to act exclusively on the general principle that whatever is is wrong.

What, then, is the plan by which popular government, which existed under the Constitution for more than a century and which has been mysteriously lost during the past few years, is to be restored to us? It is proposed, to put it in a few words, to remove all the barriers which the makers of the instrument established in order to prevent rash, hasty, and passionate action and to secure deliberation, consideration, and due protection for the rights of minorities and of individuals.

THE UNITED STATES CONSTITUTION AND ITS MAKERS

This is to be accomplished in two ways: by emasculating the representative system through the compulsory initiative and referendum and by breaking down the courts through the recall. These are the changes by which it is intended to revive popular government. Incidentally they strike at the very heart of the Constitution as the framers planned and made it, for they will convert the deliberate movement of the governmental machinery, by which its makers intended to secure to democracy both permanence and success, into an engine which starts at the touch of an electric button, which is as quick in response as a hair-trigger pistol, and as rapid in operation as a self-cocking revolver. These new and precious ideas are of a ripe age; in fact, they have passed many hundreds of years beyond the century fixed by Dr. Johnson for the establishment of a literary reputation at a point where it might be intelligently discussed. Let us therefore consider and criticize them.

The compulsory initiative and the compulsory referendum need not detain us long, for the effect of those devices is obvious enough. The entire virtue or the entire vice—each of us may use the word he prefers—of these schemes rests in the word "compulsory." The initiative without compulsion is complete in the right of petition secured by the first of the first ten amendments to the Constitution, which really constituted a Bill of Rights. The right of petition became the subject of bitter controversy at a later time and was vindicated once for all by John Quincy Adams's great battle in its behalf more than three-quarters of a century ago. There are few instances where petitions representing a genuine popular demand have not met a response in action, whether in Congress or in the State legislatures; still fewer where respectful attention and consideration have not been accorded to them. But the responsibility for action and the form such action should take have rested with the representative body. When the initiative is made compulsory a radical change is effected. A minority, sometimes a small minority of the voters, always a small minority of the people, can compel the legislature to pass a law and submit it to the voters

even when a very large majority of the people neither ask for nor, so far as the evidence goes, desire it. In this way all responsibility is taken from the representative body, and they become mere clerks for drafting and recording laws, poor puppets who move mechanically when some irresponsible outsiders twitch the strings. It is the substitution of government by factions and fractions for government by the people. The representative body as hitherto constituted represented the whole people. Under the new plan it is to be merely the helpless instrument of a minority, perhaps a very small minority, of the voters.

The voluntary referendum has always existed in this country. In the national government, owing to our dual or federal form, the referendum on constitutional amendments is necessarily made to the States, and it has never been suggested for the laws of the United States owing to both physical and constitutional difficulties. In the States the referendum has always been freely used, not only for constitutions and constitutional amendments, but for laws, especially for city charters, local franchises, and the like. But if, on the demand of a minority of the voters, the referendum is made compulsory, all responsibility vanishes from the representative body. The representative no longer seeks to represent the whole people, or even his own constituency, but simply votes to refer everything to the voters and covers himself completely by pointing to the compulsory referendum. On the other hand, the voters are called upon to legislate. Of the mass of measures submitted they know and can know nothing. Experience shows that in all referendums a large proportion of the voters decline to vote. Whether this is due to indifference or to lack of information the result is the same. It proves that this system demands from the voters what the most intelligent voters in the world are unable to give. They are required to pass upon laws, many of which they have neither time nor opportunity to understand, without deliberation and without any discussion except what they can gather from the campaign orator, who is, as a rule, interested in other matters, or from an occasional article in

THE UNITED STATES CONSTITUTION AND ITS MAKERS

a newspaper. They cannot alter or amend. They must vote categorically "yes" or "no." The majority either fails to vote, and the small and interested minority carries its measure, or the majority, in disgust, votes down all measures submitted, good and bad alike, because they do not understand them and will not vote without knowing what their votes mean.

The great laws which, both in England and the United States, have been the landmarks of freedom and made ordered liberty possible were not passed and never could have been perfected and passed in such a way as this. This new plan is spoken of by its advocates as progressive. As a matter of fact, it is the reverse of progressive, it is reactionary. Direct legislation by popular vote was familiar, painfully familiar, to Greece and Rome. In both it led through corruption, violence, and disorder to autocracy and despotism. The direct-vote system also proved itself utterly incapable of the government of an extended empire and of large populations. Where government by direct vote miserably failed, representative government, after all deductions have been made, has brilliantly succeeded. The development of the principle and practice of representative government was, as already pointed out, the one great contribution of modern times to the science of government. It has shown itself capable of preserving popular government and popular rights without the violence and corruption which resulted of old in anarchy and despotism, and at the same time it has proved its adaptability to the management of large populations and the efficient government of great empires. Representative government was an enormous advance over government by the direct vote of the forum, the agora, or the market-place, which had preceded it, and which had gone down in disaster. It is now proposed to abandon that great advance and to return to the ancient system with its dark record of disorder and failure. This is not progress. It is retreat and retrogression. It is the abandonment of a great advance and a return to that which is not only old and outworn, but which history and experience have alike discredited.

Look now for a moment at representa-

tive government as we ourselves have known it. Let us not forget, in the first place, that the Congress of the United States under the Constitution has been in continuous existence for more than 120 years; that, with the single exception of the "Mother of Parliaments," it is much the oldest representative body of a constitutional character now existing in the world. Let us also remember that the history of the American Congress is in large part the history of the United States, and that we are apt to be proud of that history as a whole and of the many great things we as a people have accomplished. Yet whatever praise history accords to the Congress of the United States in the past, the Congress of the moment and the members of that body in either branch receive but little commendation from their contemporaries. This is perhaps not unnatural, and it certainly has always been customary. Legislative bodies have rarely touched the popular imagination or appeared in a dramatic or picturesque attitude. The Conscript Fathers, facing in silence the oncoming barbarians of Gaul; Charles the First, attempting to arrest the five members; the Continental Congress adopting the Declaration of Independence; the famous Oath of the Tennis Court are almost the only instances which readily occur to one's mind of representative and legislative bodies upon whom for a brief instant has rested the halo of heroism and from which comes a strong appeal to the imagination. The men who fight by land and sea rouse immediate popular enthusiasm, but a body of men engaged in legislation does not and cannot offer the fascination or the attraction which are inseparable from the individual man who stands forth alone from the crowd in any great work of life, whether of war or of peace.

We may accept without complaint this tendency of human nature, but every dispassionate student of history, as well as every man who has had a share in the work of legislation, may rightfully deprecate the indiscriminate censure and the consistent belittling which pursue legislative bodies. This attitude of mind is not confined to the United States. The press of England treats its Parliament severely enough, although on the whole

THE UNITED STATES CONSTITUTION AND ITS MAKERS

with more respect than is the case with the American press in regard to the American Congress. But running through English novels and essays we find, as a rule, the same sneer at the representatives of the people as we do here. Very generally, both in this country and abroad, those who write for the public seem to start with the proposition that to be a member of Congress or a member of Parliament, or a member of the Chamber of Deputies in France, implies some necessary inferiority of mind or character. This theory deserves a moment's examination and is perhaps open to some doubt. As Mr. Reed once said, it is a fair inference that a man who can impress himself upon 200,000 people, or upon the whole population of a great State, sufficiently to induce them to send him to the House or Senate has something more than ordinary qualities and something more than ordinary force. Then, again, as Edmund Burke remarked, you cannot draw an indictment against a whole people, nor, one may add, can you draw an indictment against an entire class. There are good men and bad men in business and in the professions, in the ministry, in medicine, in law, and among scholars. Virtue is not determined by occupation. There are good and bad men in every profession and calling, among high and low, rich and poor, and the honest men who mean to do right largely preponderate, for if they did not the whole social structure would come crashing to the ground. What is true of business and the professions is true of Congress. There are good and bad men in public life, and the proportion of good to bad, I believe, compares favorably with that of any other occupation. Public men live in the fierce light which beats upon them as upon the throne, a light never fiercer or more pitiless than now, and for this reason their shortcomings are made more glaring and their virtues by contrast more shadowed than in private life. This is as it should be, for the man who does wrong in private life is far less harmful than the public servant who is false to his trust. To inflict upon the public servant who is a wrong-doer the severest reprobation is necessary for the protection of the community, but for this very reason we

should be extremely careful that no reprobation should be visited unjustly on any public man. It is an evil thing to betray the public trust, but it is an equally evil thing to pour wholesale condemnation upon the head of every man in public life, good and bad alike. That which suffers most from an injustice like this in the long run is not the public servant who has been unfairly dealt with, for the individual passes quickly, but the country itself. After all, the voters make the Representative. If he is not of the highest type, he appears to be that which the majority prefers. Wholesale criticism and abuse of the Representatives reflect more on the constituencies, if we stop to consider, than on those whom the constituencies select to represent them. Indiscriminate condemnation and equally indiscriminate belittling of the men who make and execute our laws, whether in State or nation, is not only a reflection upon the American people, but is a blow to the United States and every State in it. They help the guilty to escape and injure the honest and the innocent. They destroy the people's confidence in their own government and lower the country in the eyes of foreign nations.

The Congress of the United States embodies the representative principle. The principle of representation has been the great contribution of the English-speaking race to the science and practice of government.

It is also to be remembered that the representative principle has been coincident with political liberty. Whatever its shortcomings or defects—and, like all things human, it has its grave defects—it none the less remains true that the first care of every "strong man," every "savior of society," every "man on horseback," of every autocrat, is either to paralyze or to destroy the representative principle. It may be that the representative principle is not the cause of political liberty, but there can be no question whatever that the two have always gone hand in hand and that the destruction of one has been the signal for the downfall of the other. The Congress of the United States and the legislatures of the several States embody the representative principle. By that principle our laws have

THE UNITED STATES CONSTITUTION AND ITS MAKERS

been made and the republican form of government sustained for more than a century. Whatever its shortcomings, it has maintained the government of the United States and upheld law and order throughout our borders.

The framers of our government separated the executive from the legislative branch. They deemed both essential to freedom. The constitution of Massachusetts declares that the government it establishes is to be a government of laws, and not of men—a noble principle and one worthy of fresh remembrance. With such a history, and typifying as it does the great doctrines which were embodied in the Declaration of Independence, the Constitution of the United States, and the institutions of England, it may fairly be asked that if the representative principle must be criticized, as it should be, with severity when it errs, it should also be treated with that absolute justice which is not only right in the abstract, but which is essential to the maintenance of law, order, and free government, to human progress, and to the protection of the weak, even as the fathers designed that it should be. When we blame its failures let us not forget its services. They have broadened freedom down from precedent to precedent. They shine across those pages of history which tell the great story of the advance of liberty and of the ever-widening humanity which seeks to make the world better and happier for those who most need happiness and well-being. In beneficent results for the people at large no other form of government ever attempted can compare with it for a moment.

The worst feature of the compulsory initiative and referendum lies therefore in the destruction of the principle of representation. Power without responsibility is a menace to freedom and good government. Responsibility without power is inconceivable, for no man in his senses would bear such a burden. But when responsibility and power are both taken away, whether from the executive or the representatives, the result is simple inanition. No man fit by ability and character to be a representative would accept the office under such humiliating conditions. Those who accepted it would do

so for the pecuniary reward which the office carried and would sink rapidly into mere machines of record, neither knowing nor caring what they did. With a representative body thus reduced to nothingness we are left with the people, armed only with their votes, and with an executive who has necessarily absorbed all the real powers of the State. This situation is an old story, and has always ended in the same way. It presents one of those rare cases in which the teaching of history is uniform. When the representative principle has departed and only its ghost remains to haunt the Capitol, liberty has not lingered long beside its grave. The rise of the representative principle and its spread to new lands to-day marks the rise of popular government everywhere. Wherever it has been betrayed or cast down the government has reverted to despotism. When representative government has perished freedom has not long survived.

Most serious, most fatal indeed are the dangers threatened by the insidious and revolutionary changes which it is proposed to make in our representative system, upon which the makers of the Constitution relied as one of the great buttresses of the political fabric which was to insure to popular government success and stability. Yet even these changes are less ruinous to the body politic, to liberty, and order than that which proposes to subject judges to the recall. No graver question has ever confronted the American people.

The men who framed the Constitution were much nearer to the time when there was no such thing as an independent judiciary than we are now. The bad old days, when judges did the bidding of the King, were much more vivid to them than to us. What is a commonplace to us was to them a comparatively recent and a hardly won triumph. The fathers of some of those men—the grandfathers of all—could recall Jeffreys and the "Bloody Assize." They knew well that there could be no real freedom, no security for personal liberty, no justice, without independent judges. It was for this reason that they established the judiciary of the United States with a tenure which was to last during good behavior and made them

THE UNITED STATES CONSTITUTION AND ITS MAKERS

irremovable except by impeachment. The makers of the Constitution believed that there should be no power capable of deflecting a judge from the declaration of his honest belief, no threat of personal loss, no promise of future emolument, which could be held over him in order to sway his opinion. This conviction was ingrained and born with them, as natural to them as the air they breathed, as vital as their personal honor. How could it have been otherwise? The independence of the judiciary is one of the great landmarks in the long struggle which resulted in the political and personal freedom of the English-speaking people. The battle was fought out on English soil. If you will turn to the closing scenes of "Henry IV.," you will find there one of the noblest conceptions of the judicial office in the olden time ever expressed in literature. It was written in the days of the last Tudor or of the first Stuart, in the time of the Star Chamber, of judges who decided at the pleasure of the King, and when Francis Bacon, Lord Chancellor of England, took bribes or gifts. Yet lofty as is the conception, you will see that Shakespeare regarded the judge as embodying the person, the will, and the authority of the King.

We all know how the first two Stuarts used the courts to punish their enemies and to prevent the assertion of political rights, which are now such commonplaces that the fact that they were ever questioned is forgotten. The tyranny of the courts was one of the chief causes which led to the great rebellion, and out of that great rebellion, when the third Stuart had been restored, came the Habeas Corpus Act, which has done more to protect personal liberty than any act ever passed. But the second Charles and the second James had learned nothing as to the judges. They expected them to do their bidding when the King had any interest at stake, and under the last Stuart the courts reached a very low point, and the legal history of the time is characterized by the evil name of Jeffreys. When the lawyers went to pay their homage to William of Orange, they were headed by Sergeant Maynard, then ninety years of age. "Mr. Sergeant," said the prince, "you must have survived all

the lawyers of your standing." "Yes, sir," said the old man, "and but for Your Highness I should have survived the laws too." The condition of the courts was indeed one of the strongest of the many bitter grievances which wrought the revolution that placed William of Orange on the English throne. In the famous Bill of Rights there is no provision in regard to the courts, and it is not quite clear why it was omitted, although, apparently, it was due to an oversight. In any event, it was not forgotten. It was brought forward more than once in Parliament, but William announced that he would not assent to any act making the judges independent of the Crown. As his reign drew toward its close, however, he signified that, although he would veto a separate act, he would accept the independence of the judiciary if provided for in the Act of Settlement which was to determine the succession to the throne of England. Therefore we find in the Act of Settlement the clause which declares that the judges shall hold office during good behavior—"quandiu se bene gesserint"—and shall be removable only on the request of both Houses of Parliament.

It is necessary to pause a moment here and consider briefly the provision of the Act of Settlement for the removal of judges on an address by the Houses, because it has been most incorrectly used by persons ignorant probably of its history as a precedent justifying the recall. The clause was inserted not for the purpose of controlling the judges, but to protect them still further against the power of the Crown, by which they had hitherto been dominated. The history of the clause since its enactment demonstrates what its purpose was as well as the fulfilment of that purpose in practice. During the two centuries which have elapsed since William III. gave his assent to the act there has been, so far as I can learn, only one removal on address, that of Sir Jonah Barrington, an Irish judge, in 1806, more than a hundred years ago. There have been several cases where removal was petitioned for, but Barrington's was the only one in which the demand was successful. The procedure employed shows that there is no

THE UNITED STATES CONSTITUTION AND ITS MAKERS

resemblance whatever between the removal of a judge upon the address of the law-making body and the popular recall. They are utterly different, instituted for different purposes, and the former furnishes in reality a strong argument against the latter. In all the cases of removal or attempted removal by address of Parliament the accused judge was carefully tried before a special committee of each House; he could be heard at the bar of either House, he could and did employ counsel, and could summon and cross-examine witnesses. This process is as far removed from the recall as the zenith from the nadir, for under the recall the accused judge has no opportunity to summon or cross-examine witnesses, to appear by counsel, or to be properly heard and tried. He is obliged, under the recall, to make an appeal by the usual political methods and at the same time to withstand another candidate, while he is forced to seek a hearing from audiences ignorant of the law and inflamed perhaps against him by passion and prejudice. He has no chance whatever of a fair trial.

Some of our States borrowed this provision of the Act of Settlement when they formed their constitutions. The State of Massachusetts was one of them. The power has been but rarely exercised by the legislature in the hundred and thirty years which have passed since our Constitution was adopted, but it so happened that when I was in the legislature a case occurred, and I was a member of the committee on the judiciary to whom the petitions were referred. The accused judge was tried as elaborately and fairly as he could have been by any court or by the Senate if he had been impeached. He had counsel, he summoned and cross-examined witnesses, and the trial—for it was nothing less—occupied weeks. The committee reported in favor of removal, but the House rejected the committee's report. Some years later, after a similar trial, the address passed both Houses and the judge was removed by the governor for misdemeanors and malfeasance in office. A mere statement of the procedure shows at once that the removal by address is simply a summary form of impeachment with no relation or likeness to the recall. Removal by address is no

more like the recall than impeachment is. If successful, they all result in the retirement of the judge accused, but there the resemblance ends. The makers of the Constitution did not follow the Act of Settlement and adopt the removal on address. They no doubt perceived its advantages, because it made possible the removal of a judge incapacitated by insanity or age or disease without inflicting upon him the stigma of an impeachment, but they also saw that the removal by address might be used for political and personal reasons, of which one instance occurred in Massachusetts, and they probably determined that the risk of its abuse outweighed any possible benefit which might flow from its judicious exercise.

They placed their courts as far as they could on the great heights of justice, above the gusts of popular passion. They guarded them in every possible way. They knew that judges were human and therefore fallible. They knew that the courts would move more slowly than popular opinion or than Congress, but they felt equally sure that they would in the end follow that public opinion which was at once settled and well considered. All this they did because all history, and especially the history and tradition of their own race, taught them that the strongest bulwark of individual freedom and of human rights was to be found ultimately in an independent court, the corner-stone of all liberty. Their ancestors had saved the judges from the Crown. They would not retrace their steps and make them subject to the anger or the whim of any one else.

"They wished men to be free,
As much from mobs as kings,
From you as me."

The problem which they then solved has in no wise changed. The independence of the judiciary is as vital to free institutions now as then. The system which our forefathers adopted has worked admirably and has commanded the applause of their children and of foreign nations, who, Bacon tells us, are a present posterity. Now it is proposed to tear this all down and to replace the decisions of the court with the judgment of the market-place.

Those who advocate this revolution in

THE UNITED STATES CONSTITUTION AND ITS MAKERS

our system of government seem to think that a judge should be made responsive to the popular will, to the fleeting majority of one day which may be a minority the next. They would make their judges servile, and servile judges are a menace to freedom, no matter to whom their servitude is due. They talk of a judge's duty to his constituents. A judge on the bench has no constituents and represents no one. He is there to administer justice. He is there not to make laws, but to decide what the law is. He must know neither friend nor foe. He is there to declare the law and to do justice between man and man.

The advocates of the recall seem to believe that with subservient judges glancing timidly to right and left to learn what voters think, instead of looking steadfastly at the tables of the law, the poor will profit and the rich will suffer; that the individual will win and the corporation lose; that the powerful will be crushed and the weak will triumph, while the sword of the recall hangs over the head of the judicial Damocles. If ever this were true, nothing could be more fatal. A judge must know neither rich nor poor, neither strong nor weak. He must know only law and justice. He must never listen to Bassanio's appeal, "To do a great right, do a little wrong." But the theory is in reality most lamentably false. No man fit to be a judge would, with few exceptions, take office under the recall. In the end the bench would be filled by the weak and the unscrupulous. The weak would make decisions to curry favor and hold votes. The unscrupulous would use their brief opportunity to assure their own fortunes, and that assurance could come only from the rich and the powerful, who would thus control the decisions. For the American court we should substitute the Oriental *cadi*, with the bribe-giver whispering in his ear. If a criminal happened to belong to some large and powerful organization in whose interest the crime was committed, he would have little to fear from a court where a judge subject to the recall presided. We should have courts like those ruled by the Camorra in the days of the Neapolitan Bourbons except that the subservience of the judge would

be insured by fear of the recall instead of by dread of assassination. The result would be the same, and certain criminals would become a privileged class and commit their crimes with impunity.

In one of the noblest passages of his letter to the sheriffs of Bristol Edmund Burke says:

"The poorest being that crawls on earth contending to save itself from injustice and oppression is an object respectable in the eyes of God and man."

Without the independent judge those words could never have been written, for before the independent judge alone could the poorest being hope to contend against injustice. Judges, of course, are human, and therefore err. There have been one or two great cases where the decision of the highest court travelling beyond its province has been reversed and swept away by the overwhelming force of public opinion and the irresistible currents of events. Only too well do we know that we suffer from the abuse of technicalities, from delays which are often a denial of justice, and that the methods of our criminal law are in many States a disgrace to civilization. But all these delays and abuses and miscarriages of justice are within the reach of Congress and legislatures, and these evils can be remedied by statute whenever public opinion demands a reform. Their continued existence is our own fault. Yet when all is said the errors of the highest courts are few and the abuses and shortcomings to which I have referred can be cured by our own action. In the great mass of business, in the hundreds of trials which go on day by day and year by year, justice is done and the rights of all protected. We may declare with truth that in the courts as we have known them the poor, the weak, the helpless have found protection and sometimes their only defence. A mob might thunder at the gates, money might exert its utmost power, but there in the court-room the judge could see only the law and justice. The safeguard of the rights and liberties of minorities and individuals, of the weak, and, above all, of the unpopular, as a rule, has been found only in the court. And now it is proposed to undo all this and

THE UNITED STATES CONSTITUTION AND ITS MAKERS

to make the judges immediately dependent on the will of those upon whom they must pass judgment. If the framers of the Constitution were alive to-day, they would not find a single new condition to affect their faith in an independent judiciary. They would decide now as they decided then. Are we ready to reverse their judgment and open the door to the flood of evils which will rush into the State as they always have rushed in when in times past the courts were controlled by an outside power?

The destruction of an independent judiciary carries with it everything else, but it only illustrates sharply the general theory pursued by the makers of the Constitution. They established a democracy, and they believed that a democracy would be successful; but they also believed that it could succeed solely through forms and methods which would not make it impossible for the people to carry on their own government. For this reason it was that they provided against hasty action, guarded against passion and excitement, gave ample room for the cooler second thought, and arranged that the popular will should be expressed through representative and deliberative assemblies and the laws administered and interpreted through independent courts. Those who would destroy their work talk continually about trusting the people and obeying the people's will. But this is not what they seek. The statement as they make it is utterly misleading. That for which they really strive is to make the courts and the Congress suddenly and rapidly responsive to the will of a majority of the voters. It matters not that it may be a narrow, an ephemeral, or a fluctuating majority. To that temporary majority, which the next year may be changed to a minority, the Congress and the courts must at once respond. Legislation of the most radical, the most revolutionary character may thus be forced upon the country, not only without popular assent, but against the will of the great mass of the people.

The framers of the Constitution made it in the name and for the benefit of the people of the United States; for the entire people, not for any fraction or class of the people. They did not make the Con-

stitution for the voters of the United States. They recognized that the popular will could only be expressed by those who voted and that the expression of the majority must in the end be final. But they restrained and made deliberate the action of the voters by the limitations placed upon the legislative, the executive, and the judicial branches, so that the rights of all the people might be guarded and protected against ill-considered action on the part of those who vote. Those who now seek to alter the fundamental principles of the Constitution start with a confusion of terms and a false proposition. They talk glibly of "the people." But they mean the voters, and the voters are not the people, but a small portion of the people, not more than a fifth or a sixth part, who are endowed by law with the power to express what is to be regarded as the popular will. The legal voters are the representatives and trustees of all the inhabitants of the country, of all those under twenty-one to whom the future belongs, of all the women, of all resident aliens, and of all persons not qualified to vote. They are the instrument, the only practicable instrument, for reaching an expression of the popular will; but they are not the people as a whole, for whom and for whose protection the Constitution was made. It was for the protection of the people that the makers of the Constitution made provisions to assure deliberate movement and to prevent hasty, passionate, or ill-considered action. The purpose of those who would destroy the present Constitution is to remove these safeguards and for the "people" of the Constitution substitute, without check, hindrance, or delay, the will of the voters of the moment. They are blind to the awful peril of turning human nature loose to riot among first principles.

But they do not stop even there. Under the system they propose a small minority of the voters, who are themselves a minority of the people, are to have unlimited power to compel the passage of laws. A small minority will be able and, as the experience of the voluntary referendum shows, will in almost every instance contrive to place laws upon the statute-book which the mass of the people really do not desire. A small

THE UNITED STATES CONSTITUTION AND ITS MAKERS

minority can force the recall of a judge and drive him from the bench. The new system places the actual power in the hands of minorities, generally small, always interested and determined. Instead of government "by the people and for the people" we shall have government by factions, with all the turbulence, disorder, and uncertainty that the rule of factions ever implies. Such a system is a travesty of popular government and the antipodes of true democracy. Under the same conditions of human nature, with no element of decision lacking then that we have now, the framers of the Constitution established the system under which we have flourished and rejected that which it is now proposed to set up and which all experience had shown to be a failure. Their system embodied in the Constitution has proved its efficacy. It has worked well, and it has been an extraordinary success. The other, burdened with the failures of centuries, has always trodden the same path which revolves in the well-worn vicious circle from democracy to anarchy, from anarchy to despotism, and then by slow and painful steps back to the high levels of an intelligent freedom and an ordered liberty. Our ancestors sought to make it as impossible as human ingenuity could devise to drag democracy down by the pretence of giving it a larger scope. We are asked to retrace our steps, adopt what they rejected, take up that which has failed, cast down that which has triumphed, and for government by the people substitute the rule of factions led by the eternal and unwearied champions who in the name of the people seek the promotion which they lack.

Such are the questions which confront us to-day, amazing in their existence under a Constitution with such a history as ours. The evils which it is sought to remedy are all, so far as they actually exist, curable by law. No doubt evils exist; no doubt advance, reform, progress, improvements are always needed as conditions change, but they can all be attained by law. There is no need to destroy the Constitution, to wreck the fundamental principles of democracy and of the Bill of Rights embodied in the first ten Amendments, in order to attain to an

amelioration of conditions and to a wider and more beneficent social state when statutes can effect all and more than is demanded.

All these questions, all these reforms and revolutions so gloriously portrayed to us, it cannot be said too often, are very old. Their weakness is not that they are new, but that they are time-worn and outworn. The voices which are now crying so shrilly that we must destroy our Constitution and abandon all our principles of government have been heard—

"In ancient days by Emperor and clown."

They are as old as human discontent and human impatience, and are as ancient as the flattery which has followed sovereign authority from the days of the Pharaohs to our own.

There is a familiar story, which we all heard as children, of the courtiers of Knut, King of England, a mighty warrior and a wise man, not destitute evidently of humor. These courtiers told the King that the tide would not dare to come in against his command and wet his feet. So he bade them place his chair near the edge of the sea, and the main came silent, flooding in about him, and we all remember the lesson which the King read to his flatterers. Many kings have come and gone since then, and those who still remain now for the most part walk in fetters. But the courtier is eternal and unchanged. He fawned on Pharaoh and Cæsar, and from their day to our own has always been the worst enemy of those he flattered. He and his fellows contended bitterly in France for the privilege of holding the King's shirt, and when the storm broke which they had done so much to conjure up, with few exceptions they turned like cravens and fled. New courtiers took the vacant places. They called themselves friends of the people, but their character was unaltered. They flattered the mob of the Paris streets, shrieking in the galleries of the convention, with a baseness and a falsehood surpassing even those of their predecessors who had cringed around the throne. Where there is a sovereign there will be courtiers, and too often the sovereign has listened to the courtiers and turned his back on the loyal friends who were

UNITED STATES CONSTITUTIONAL CONVENTION

ready to die for him, but would not lie to him. Too often has the sovereign forgotten that, in the words of one of the most penetrating and most brilliant of modern English essayists, "a gloomy truth is a better companion through life than a cheerful falsehood." Across the centuries come those dangerous and insidious voices, and they sound as loudly now and are as false now as ever. They are always at hand to tell the sovereign that at his feet the tide will cease to ebb and flow, that the laws of nature and economic laws alike will at his bidding turn gently and do his will. And the tides move on and the waves rise and the sovereign who has listened to the false and selfish voices is submerged in the waste of waters, while the courtiers have rushed back to safety and from the heights above are already shouting: "The king is dead! Long live the king!"

With a deep reverence for the great men who fought the Revolution and made the Constitution, when they dealt with elemental questions and fundamental principles, the same yesterday, to-day, and forever in human history, one follows them because they have proved their wisdom by their success. I am not ready to say with Donne—

"We are scarce our father's shadow cast at noon—"

but I am more than ready to say I profoundly believe that we should cherish in our heart of hearts the noble and familiar words of the wise son of Sirach:

"Let us now praise famous men and our fathers that begat us. The Lord hath wrought great glory by them through His great power from the beginning. Leaders of the people by their counsel and by their knowledge of learning meet for the people; wise and eloquent in their instructions; all these were honored in their generations and were the glory of their times.

"There be of them, that have left a name behind them, that their praise might be reported. And some there be which have no memorial; who are perished as though they had never been and are become as though they had never been born; and their children after them. But these were merciful men whose righteousness hath not been forgotten. With their seed shall continually remain a good inheritance, and their children are within the covenant.

"Their seed standeth fast and their children for their sakes. Their seed shall remain forever, and their glory shall not be blotted out. Their bodies are buried in peace; but their name liveth forever more. The people will tell of their wisdom, and the congregation will show forth their praise."

UNITED STATES CONSTITUTIONAL CONVENTION

United States Constitutional Convention to Amend the Constitution—Why Needed—How It May Be Obtained.—Walter K. Tuller, the author of the following article, was born in Kansas, but the major part of his life has been passed in California. He is a graduate of the academic department of the University of California and also of its law school. Since his graduation he has practised law in San Francisco and Los Angeles. This article was written in 1910.

A Convention to Amend the Constitution.—A large majority of the people of the country are in favor of the election of United States Senators by direct vote. That this is a fact probably few will

question. For years the question of direct election of Senators has been debated and the arguments pro and con advanced. But a large proportion of the public have now reached the conclusion that their election by direct vote will result in closer relations between the great body of people and their representatives in Congress and will tend to promote better government. This conviction has undoubtedly been brought about largely by the many and frequently disgraceful abuses which have resulted under the present system of choosing Senators. Many persons feel also that the members of the State legislature should be chosen rather for their individual merit than for their party affiliations—that opinions on national

UNITED STATES CONSTITUTIONAL CONVENTION

issues have little to do with the desirability of candidates for a legislative body which has to pass on matters of local legislation. Under present conditions, however, most men feel the necessity of voting for their party candidate for the legislature, even though they do not consider him the best qualified for the place when he may have the choosing of a United States Senator. Hence the feeling that the popular election of Senators will tend to a higher standard in local legislation. At the time of the adoption of the Constitution the Senators were considered as representatives of the States as separate entities. This had much to do with the manner provided in the Constitution for their election. When the Constitution was adopted we were a confederation of separate States. To-day we are a nation. We have reached a grander conception of our nationality. To-day the State and national governments are mere agencies to conduct the business of the real sovereign—the people of the United States.

But the question that is now of paramount importance is: How is this change to be brought about? It requires, of course, an amendment to the federal Constitution. Many States are attempting to reach the practical result by advisory popular votes more or less binding upon the legislature. But this is a mere make-shift; better, perhaps, than the old state of things, but at most only a temporary expedient. The Constitution must be amended. There are two means by which amendments may be proposed. One is for Congress to submit a proposed amendment to the States for ratification. The other is for a constitutional convention to submit proposed amendments for similar ratification. Four times, twice without a dissenting vote, has the House of Representatives passed a resolution submitting an amendment providing for the popular election of Senators. Not one of these resolutions has passed the Senate. *Not one has even been allowed to come to a vote in that body.* It does not seem very probable that popular election of Senators will be secured in this way. But, as just stated, there is another means provided for securing amendments to the Constitution. Article V. of that instrument provides:

“Section 1. The Congress, whenever two-thirds of both Houses shall deem it necessary, shall propose amendments to this Constitution, or, on the application of the legislatures of two-thirds of the several States, shall call a convention for proposing amendments, which, in either case, shall be valid, to all intents and purposes, as part of this Constitution, when ratified by the legislatures of three-fourths of the several States or by conventions in three-fourths thereof, as the one or the other mode of ratification may be proposed by the Congress; *provided* that no amendment which may be made prior to the year one thousand eight hundred and eight shall, in any manner, affect the first and fourth clauses in the ninth section of the first article; and that no State, without its consent, shall be deprived of its equal suffrage in the Senate.”

There are now forty-six States in the Union. Two-thirds of that number are thirty and two-thirds, or thirty-one applications, are required before Congress is obliged to call a constitutional convention. *The fact about to be stated may not be generally known, but it is a fact, nevertheless; the legislatures of twenty-eight States have already formally applied to Congress to call such a convention.* The following are the States whose legislatures have made such applications:

Arkansas	1903
California	1903
Colorado	1901
Delaware	1907
Idaho	1908
Illinois	1903–1909
Indiana	1907
Iowa	1907–1909
Kansas	1907
Kentucky	1902
Louisiana	1907
Michigan	1901
Minnesota	1901
Missouri	1907
Montana	1907
Nebraska	1903
Nevada	1907
New Jersey	1907
North Carolina	1907
Oklahoma	1908
Oregon	1901–1909

UNITED STATES CONSTITUTIONAL CONVENTION

Pennsylvania	1901
South Dakota	1908
Tennessee	1901-1905
Texas	1899-1901-1908
Utah	1908
Washington	1903
Wisconsin	1908

In other words, but three more such applications are required to impose upon Congress the duty of calling a constitutional convention. Should Arizona and New Mexico be admitted before this number of applications are made, there will be forty-eight States in the Union, or thirty-two such applications required. The text of these resolutions may be of interest. The following are typical:

LOUISIANA

"Whereas we believe that Senators of the United States should be elected directly by the voters; and

"Whereas to authorize such direct election an amendment to the Constitution of the United States is necessary; and

"Whereas the failure of Congress to submit such amendment to the States has made it clear that the only practicable method of securing a submission of such amendment to the State is through a constitutional convention, to be called by Congress upon the application of the legislatures of two-thirds of all the States: Therefore be it

"Resolved by the general assembly of the State of Louisiana, That the Legislature of the State of Louisiana hereby makes application to the Congress of the United States, under Article V. of the Constitution of the United States, to call a constitutional convention for proposing amendments to the Constitution of the United States.

"Sec. 2. That this resolution, duly authenticated, shall be delivered forthwith to the President of the Senate and Speaker of the House of Representatives of the United States, with the request that the same shall be laid before the said Senate and House."

KANSAS

"Whereas there is a wide-spread and rapidly growing belief that the Constitution of the United States should be so amended as to provide for the election

of the United States Senators by the direct vote of the people of the respective States; and

"Whereas other amendments to the United States Constitution are by many intelligent persons considered desirable and necessary; and

"Whereas the Senate of the United States has so far neglected to take any action whatever upon the matter of changing the manner of electing United States Senators, although favorable action upon such proposed change has several times been unanimously taken by the House of Representatives: Therefore be it

"Resolved by the House of Representatives of the State of Kansas (the Senate concurring therein), That the Legislature of Kansas, in accordance with the provisions of Article V. of the Constitution of the United States, hereby apply to and request the Congress of the United States to call a convention for the purpose of proposing amendments to the Constitution of the United States."

PENNSYLVANIA

"Whereas a large number of State legislatures have at various times adopted memorials and resolutions in favor of election of United States Senators by popular vote; and

"Whereas the national House of Representatives has on four separate occasions, within recent years, adopted resolutions in favor of this proposed change in the method of electing United States Senators, which were not adopted by the Senate; and

"Whereas Article V. of the Constitution of the United States provides that Congress, on the application of the legislatures of two-thirds of the several States, call a convention for proposing amendments, and believing there is a general desire upon the part of the citizens of the State of Pennsylvania that the United States Senators should be elected by a direct vote of the people: Therefore be it

"Resolved (if the House of Representatives concur), That the Legislature of the State of Pennsylvania favors the adoption of an amendment to the Constitution which shall provide for the election of United States Senators by popular vote, and joins with other States of the Union

UNITED STATES CONSTITUTIONAL CONVENTION

in respectfully requesting that a convention be called for the purpose of proposing an amendment to the Constitution of the United States as provided for in Article V. of the said Constitution, which amendment shall provide for a change in the present method of electing United States Senators so that they can be chosen in each State by a direct vote of the people."

WISCONSIN

"Whereas Article V. of the Constitution of the United States provides that 'the Congress, whenever two-thirds of both Houses shall deem it necessary, shall propose amendments to this Constitution, or on the application of the legislatures of two-thirds of the several States shall call a convention for proposing amendments, which in either case shall be valid to all intents and purposes as part of this Constitution when ratified by the legislatures of three-fourths of the several States or by convention in three-fourths thereof,' etc.; and

"Whereas the House of Representatives of the Congress of the United States has on four separate occasions passed by a two-thirds vote a resolution proposing an amendment to the Constitution providing for the election of United States Senators by direct vote of the people; and

"Whereas the United States Senate has each time refused to consider or vote upon said resolution, thereby denying to the people of the several States a chance to secure this much-desired change in the method of electing Senators; therefore be it

"Resolved by the Senate and Assembly of the State of Wisconsin, That, under the authority of Article V. of the Constitution of the United States, application is hereby made to Congress to forthwith call a constitutional convention for the purpose of submitting to the States for ratification an amendment to the federal Constitution providing for the election of United States Senators by direct vote of the people."

All of the resolutions except that passed by the legislature of Delaware referred principally to the matter of an amendment to provide for popular election of Senators. In the resolution passed by the legislature of Delaware, the matter apparently moving that body was the desire to secure

an amendment to prevent polygamy. The resolution, however, formally applies to Congress to call a constitutional convention.

In addition to the States above enumerated, the legislatures of Wyoming and Alabama have declared themselves in favor of the proposed amendment in resolutions to Congress, although the somewhat unhappy wording of their resolutions probably prevents them from being operative as formal applications for such a convention.

In 1895 the legislature of Wyoming passed and submitted to Congress a resolution or memorial reciting that the exciting and disturbing contest for seats in the legislature in many of the States has been owing in great measure to impending contests for United States Senators; that in many States the sessions of the legislature are limited to a specified time, and much of this time has been wasted and consumed in a fruitless effort to elect Senators, and providing further:

"The temptation to corruption and the inducements to influence legislators by questionable means would be entirely removed if the election of Senators were transferred to the people. It is believed the business of the legislature should be confined to matters of legislation, and that the excitement attendant upon the selection of United States Senators by the legislature interferes to a great degree with that business. The growth of a public sentiment in this direction we believe to be grounded upon good reasons, calling for an amendment of the Constitution in this respect,"

and urging Congress to submit a constitutional amendment to provide for popular election.

In 1910 the legislature of Alabama passed and submitted to Congress a resolution providing in part:

"Whereas, Article V. of the Constitution of the United States provides that whenever two-thirds of both Houses (of Congress) shall deem it necessary, shall propose amendments to the Constitution, or, on application of the legislatures of two-thirds of the several States, shall call a convention for proposing amendments, which in either case shall be valid to all intents and purposes:

UNITED STATES CONSTITUTIONAL CONVENTION

"And whereas the legislatures of twenty-seven States have applied to the Congress of the United States for the submission to the States of an amendment to the Constitution providing for the election of United States Senators by direct vote of the people" and petitioning Congress to submit an amendment providing for direct election of Senators.

While these resolutions clearly indicate the sentiment of these legislatures, they can hardly be held, as above stated, to constitute such formal application for a convention as is required by the Constitution. It is entirely competent, however, for the legislatures of these States to adopt resolutions hereafter formally requesting Congress to call such a convention.

But in view of the action of the Senate, as heretofore noted, on the proposition to submit an amendment directly, some may question whether it will concur in issuing a call for a constitutional convention even though two-thirds of the State legislatures formally apply therefor. But when that number of States apply, Congress has, under the Constitution, absolutely no discretion. This will be more fully considered hereafter. It would hardly seem, therefore, that the Senate would wilfully violate the Constitution which every member is sworn to uphold. But assuming that it should do so—is there any remedy? In that event, it is believed Congress can be directly compelled to issue the call. At first blush this proposition may seem extremely radical and perhaps decidedly visionary. But it may not be so.

Let it first be clearly appreciated that, under the Constitution, Congress has no discretion in the matter of calling a convention when the legislatures of two-thirds of the States have applied therefor. In that event the Constitution provides that Congress "shall" call a convention. The word "shall," as there used, is equivalent to the word "must." The framers of the Constitution evidently adopted this provision advisedly and with this intention. By the first part of the provision Congress is authorized to propose amendments in its discretion. But this alone would obviously leave it within

the power of Congress to forever prevent any amendment. A further means of proposing amendment was, therefore, provided with which Congress was to have no discretion. In other words, when the requisite number of applications are made the Constitution makes it the *positive duty* of Congress to call the convention regardless of whether that body considers it advisable or not. This is the express language of the Constitution, and the Constitution is "the supreme law of the land" (Article VI., Section 2). The idea thus expressed is exactly the idea that the framers of the instrument intended it to express. That there may be no doubt on this fundamental proposition let us present the direct proof. The following, taken from Elliott's *Debates of the Constitutional Convention of 1787*, is believed to be all that appears upon this particular matter and conclusively establishes the proposition just asserted:

"Tuesday, May 29

"(P. 126) Mr. Randolph then opened the main business [of the convention]:

"... He observed that, in revising the federal system, we ought to inquire, first, into the properties which such a government ought to possess; secondly, the defects of the Confederation; thirdly, the dangers of our situation; and, fourthly, the remedy. . . . He proposed, as conformable to his ideas, the following resolutions, which he explained one by one. . . .

"(P. 128) '13. Resolved, that provision ought to be made for the amendment of the Articles of Union whensoever it shall seem necessary; and that the assent of the national Legislature ought not to be required thereto.'

"Mr. Charles Pickney laid before the House the draft of a federal government which he had prepared, to be agreed upon between the free and independent States of America: . . .

"(P. 132) Art. XVI. If two-thirds of the legislatures of the State apply for the same, the Legislature of the United States shall call a convention for the purpose of amending the Constitution; or should Congress, with the consent of two-thirds of each House, propose to the States amendments to the same, the agreement of two-thirds of the legislatures of the

UNITED STATES CONSTITUTIONAL CONVENTION

States shall be sufficient to make the said amendments parts of the Constitution."

"Tuesday, June 5

"(P. 157) The thirteenth resolution [of Mr. Randolph] to the effect that provision ought to be made for hereafter amending the system now to be established, without requiring the assent of the national Legislature, being taken up:

"Mr. Pickney doubted the propriety or necessity of it.

"Mr. Gerry favored it. The novelty and difficulty of the experiment requires periodical revision. The prospect of such revision would also give immediate stability to the government. Nothing has yet happened in the States where this provision existed to prove its impropriety. The proposition was postponed for future consideration."

"Monday, June 11

"(P. 182) The thirteenth resolution for amending the national Constitution hereafter, without consent of the national Legislature being considered, several members did not see the necessity of the resolution at all, nor the propriety of making the consent of the national Legislature unnecessary.

"Colonel Mason urged the necessity of such a provision. The plan now to be formed will certainly be defective, as the Confederation has been found on trial to be. Amendments, therefore, will be necessary; and it will be better to provide for them in an easy, regular, and constitutional way than to trust to chance and violence. It would be improper to require the consent of the national Legislature, because they may abuse their power and refuse their consent on that very account. The opportunity for such an abuse may be the fault of the Constitution calling for amendment.

"Mr. Randolph enforced these arguments. The words 'without requiring the consent of the national Legislature' were postponed. The other provision in the clause passed *nem. con.*"

"Monday, August 6

"(P. 376) Mr. Rutledge delivered in the report of the committee of detail as follows, a printed copy being at the same time furnished to each member: . . .

"(P. 381) 'Art. XIX. On the application of the legislatures of two-thirds of

the States in the Union for an amendment of this Constitution, the Legislature of the United States shall call a convention for that purpose.'"

"Thursday, August 30

"(P. 498) Article XIX [above] was taken up.

"Mr. Gouverneur Morris suggested that the Legislature should be left at liberty to propose amendments whenever they pleased.

"The article was agreed to, nem. con."*

"Monday, September 10

"(P. 530) Mr. Gerry moved to reconsider Article XIX., viz. [quoting]:

"This Constitution, he said, is to be paramount to the State constitution. It follows, hence, from this Article that two-thirds of the States may obtain a convention, a majority of which can bind the Union to innovations that may subvert the State constitution altogether. He asked whether this was a situation proper to be run into.

"(P. 531) Mr. Hamilton seconded the motion; but, he said, with a different view from Mr. Gerry. He did not object to the consequences stated by Mr. Gerry. There was no greater evil to subject the people of the United States to the major voice than the people of a particular State. It had been wished by many, and was much to have been desired, that an easier mode of introducing amendments had been provided by the Articles of Confederation. It was equally desirable now that an easy mode should be established for supplying defects which will probably appear in the new system. The mode proposed was not adequate. The State legislatures will not apply for alterations, but with a view to increase their own powers. The national Legislature will be the first to perceive, and will be most sensible to, the necessity of amendments; and ought *also** to be empowered, whenever two-thirds of each branch should concur, to call a convention. There could be no danger in giving this power, as the people would finally decide in the case.

"Mr. Madison remarked on the vagueness of the terms, 'Call a convention for the purpose,' as sufficient reason for reconsidering the Article. How was a conven-

* Italics author's.

UNITED STATES CONSTITUTIONAL CONVENTION

tion to be formed? By what rule decide? What the force of its acts?

"[Motion to reconsider carried.]

"Mr. Sherman moved to add to the Article 'or the Legislature may propose amendments to the several States for their approbation, but no amendments shall be binding until consented to by the several States.'

"Mr. Gerry seconded the motion.

"Mr. Wilson moved to insert 'two-thirds of' before the words 'several States.'

"[Motion lost.]

"Mr. Wilson then moved to insert 'three-fourths of' before 'the several States,' which was agreed to *nem. con.*

"Mr. Madison moved to postpone the consideration of the amended proposition in order to take up the following:

" 'The Legislature of the United States, whenever two-thirds of both Houses shall deem necessary, or on the application of two-thirds of the legislatures of the several States, shall propose amendments to this Constitution, which shall be valid to all intents and purposes, as part thereof, when the same shall have been ratified by three-fourths, at least, of the legislatures of the several States or by conventions in three-fourths thereof, as one or the other mode of ratification may be proposed by the Legislature of the United States.'

"(P. 532) Mr. Hamilton seconded the motion.

"[The clause preventing amendments affecting slavery prior to 1808 added.]

"On the proposition of Mr. Madison and Mr. Hamilton [carried]."

"Saturday, September 15

"Article V. [just quoted].

"(P. 551) Mr. Sherman expressed his fears that three-fourths of the States might be brought to do things fatal to particular States; as abolishing them altogether or depriving them of their equality in the Senate. . . .

"Colonel Mason thought the plan of amending the Constitution exceptionable and dangerous. As the proposing of amendments is in both the modes to depend, in the first immediately, in the second ultimately, on Congress, no amendments of the proper kind would ever be obtained by the people if the government

should become oppressive, as he verily believed would be the case.

"Mr. Gouverneur Morris and Mr. Gerry moved to amend the Article so as to *require** a convention on application of two-thirds of the States.

"Mr. Madison did not see why Congress would not be as much bound to propose amendments applied for by two-thirds of the States as to call a convention on the like application. He saw no objection, however, against providing for a convention for the purpose of amendments, except only that difficulties might arise as to the form, the quorum, etc., which in constitutional regulations ought to be as much as possible avoided.

"The motion of Mr. Gouverneur Morris and Mr. Gerry was agreed to, *nem. con.* . . .

"(P. 552) Mr. Gouverneur Morris moved to annex a further proviso—that no State, without its consent, shall be deprived of its equal suffrage in the Senate.'

"This motion, being dictated by the circulating murmurs of the small States, was agreed to without debate, no one opposing it or on the question saying no. . . .

"The Constitution was then ordered engrossed, and the House adjourned."

"Monday, September 17

"(P. 553) The engrossed Constitution being read . . . the members then proceeded to sign the Constitution, as finally amended, as follows: . . .

"Article V. [as quoted in the beginning of this discussion]."

It appears, therefore, that it was the express will of the convention that there should be a means of amending the Constitution without the consent of Congress; that pursuant to this idea the provision as originally adopted by the convention gave Congress no discretion whatever in regard to amendments, and the provision giving Congress power to propose amendments directly was a later addition and was intended simply to provide an additional and more speedy method of proposing amendments, but that throughout it was intended that when two-thirds of the States applied for a constitutional convention it should become the unqualified duty of Congress to issue a call.

* Italics are author's.

UNITED STATES CONSTITUTIONAL CONVENTION

Hence it is submitted that when the specified conditions have been performed, it becomes the absolute duty of Congress, under the Constitution, to call a convention, regardless of its ideas as to the necessity or propriety thereof. It is clear that a failure to act is equivalent to a refusal to perform this duty. The immediate question, therefore is: Should Congress refuse to perform this duty, is there any method, under the Constitution, of compelling it to call a convention? If there is not, then the intention of those who framed and adopted the Constitution, and the express mandate of that instrument, are nullified, for it still rests with Congress absolutely to prohibit any amendments; if there is not, *then there exists in this nation and under our Constitution a body that is above the law, above even the Constitution.*

If the power to compel this action exists at all, clearly it must rest with the judiciary. The question, then, is reduced to this: Should Congress refuse to perform this duty, has the judicial department of the government the authority, under the Constitution, to compel it to do so? The negative of this proposition will undoubtedly be urged on the ground that the three branches of the government — executive, legislative, and judicial—are co-ordinate and co-equal and each supreme within its sphere, and therefore that the judicial department has no authority or jurisdiction over the legislative to compel it to perform any act. That the three departments are co-ordinate and co-equal and each supreme within its sphere is unquestionably one of the fundamental principles on which our plan of government is based. Under this principle, when Congress is engaged in legislative business, it is clear beyond the possibility of dispute that no other department of the government has any authority to determine its action. Equally, when the executive branch of the government is engaged in performing its executive functions, no other department has any authority over it. But this is because the matter of determining, in such cases, what action shall be taken is delegated by the Constitution to the discretion of that branch of the government. So long, therefore, as Congress is acting in a legislative capacity—that is, in all

cases where the Constitution has vested in it the discretion to determine whether any action at all, or what action, shall be taken—the judiciary has no authority over it. But it is equally beyond dispute (and this is the proposition of the greatest importance that is sometimes overlooked) that the supremacy of the several departments is *under the Constitution*; it arises out of, depends upon, and is subservient to the Constitution. In calling a convention when the legislatures of two-thirds of the States have applied therefor, it has been shown that, under the Constitution, Congress has no discretion. In this one instance, which is perhaps the only one, *Congress acts not in a legislative, but in a purely ministerial capacity.* Whether an act is legislative or ministerial depends not upon the person appointed to perform it, but on the nature of the act itself; and, as has been shown, in this case Congress is simply the agent appointed and commanded by the Constitution to perform a specific act when certain specific conditions have been fulfilled. That Congress is commanded to do the act, regardless of its discretion, demonstrates beyond the necessity of argument that it is a ministerial duty. Had that office been created by the Constitution, it might equally well have been provided that upon the performance of the specified conditions the Secretary of State should issue the call. Had this been done, it is believed no one would seriously question that the act would be purely ministerial and that the courts might compel its performance. The nature of the act remains the same, whosoever is appointed to perform it; being ministerial in its nature, it remains ministerial, though Congress is the agent appointed by the Constitution to carry it into execution.

Where the law imposes a specific duty upon a person or a body, it is pre-eminently within the jurisdiction and the duty of the judiciary to enforce it. This is one of the chief, if not indeed the primary, object for which courts are created. In enforcing the performance of such a duty, then, the judiciary is not invading or infringing upon the province of any other department of the government. On the contrary, it is simply performing the functions and fulfilling the obligations imposed

UNITED STATES CONSTITUTIONAL CONVENTION

on it by the Constitution. Thus in the celebrated case of *Marbury vs. Madison* (1, Cranch, 137), decided by the Supreme Court of the United States in 1803, the opinion being delivered by Chief-Justice Marshall, it was held that the judiciary has the authority, under the Constitution, to compel the executive department to perform ministerial acts commanded by law. That case established the rule that, notwithstanding the principle that the various departments of the government are co-equal and each supreme within its sphere, the judicial department has the authority and the duty, under the Constitution, to compel the executive to perform acts commanded by law in regard to which no discretion is left to the executive.*

This principle has been reaffirmed and enforced both in the federal and State courts times almost without number, and no principle of constitutional law is more thoroughly settled. It was clearly stated by Mr. Justice Bradley in *Board of Liquidation vs. McComb*, 92 U. S., 531, 541, as follows:

"But it has been well settled that when a plain official duty, requiring no exercise of discretion, is to be performed and performance is refused, any person who will sustain personal injury by such refusal may have a mandamus to compel its performance."[†]

It may be taken as established, then, that the judicial department has the authority, under the Constitution, to compel the executive to perform a ministerial act, and this does not infringe upon the independent supremacy of that department of the government within its sphere. It is believed that it has been proved that the act of calling a convention, under the provision of the Constitution heretofore quoted, is a purely ministerial act. Upon what principle, then, can it be maintained

that the judicial department is without authority to compel the performance thereof? Is the executive liable to be compelled to obey the law and yet the legislative department free to disobey even the Constitution? The very proposition first urged against the authority of the court, that the several branches of the government are co-equal, would seem to demonstrate that the legislative branch cannot claim such an exemption to which the executive is not entitled.

The right to compel performance of the constitutional mandate is simply the converse of the principle which is thoroughly established, that it is the function and duty of the judiciary to nullify any act of Congress which is in conflict with the Constitution. It no more infringes upon the principle of the independence and separate functions of the three branches of the government to compel Congress to perform an act which the Constitution positively commands than to nullify an act of that body which it prohibits. Both rest upon the same principle, that the supremacy of Congress within its sphere is *undisturbed*, and not independent of, the Constitution.

It is submitted, therefore, that the act of calling the convention being purely ministerial and commanded by the Constitution, the judicial department of the government has the authority and jurisdiction, under the Constitution, to compel Congress to perform it; and this in no wise violates the principle that the three departments of the government are co-ordinate and co-equal and each supreme within its sphere.* As heretofore noted,

* In this connection the case of *State ex rel. Benton vs. Elder*, 31 Neb., 169, is of interest. Respondent Elder was the speaker of the Nebraska house of representatives. The constitution of that State required him to open and publish at a specified time and place the returns of the election for officers of the executive department of the State government. The relator Benton brought this proceeding in the Supreme Court, praying for a writ of mandamus to compel Elder as speaker of the house to perform this duty, alleging that he had refused to do so. Elder answered, setting up that as speaker and presiding officer of the house of representatives he represented an independent

* See also the strong opinion delivered by Mr. Justice Thompson in the almost equally celebrated case of *Kendall vs. U. S.*, 12 Peters, 524.

† See also *Garfield vs. Goldsby*, 211 U. S., 249, 261; *Noble vs. Union River Logging R. R.*, 147 U. S., 165, 171, collecting numerous authorities to the same effect.

UNITED STATES CONSTITUTIONAL CONVENTION

this is probably the only case in which Congress, as a body, acts in a ministerial capacity, and hence the only one in which the courts would have this power over it.[†]

The authority or jurisdiction of the judicial department to make an order must not be confused with its physical ability to compel obedience thereto. Were it to come to a question of comparative physical strength between the judiciary and the executive, for instance, the latter, with the army and navy behind it, would, of course, be vastly superior. That fact, however, does not impair the constitutional authority of the former to make an order commanding the executive to perform an act which the law requires him to do. So, if it came to a matter of comparative physical strength, Congress might be able to summon more force than the courts, but the latter's authority, under the Constitution, depends on no such consideration. The government is a unit. It is composed of co-ordinate branches working together under the same supreme law, not of separate antagonistic bodies. Every officer, of whatever branch, is sworn to support and obey the Constitution, and it is the natural presumption, fully justified by our history, that none will refuse to obey its mandates as interpreted by that body whose function and duty it is to do so.

The form of remedy for compelling Congress to act would seem clearly to be a writ of mandamus. It is believed that such a proceeding may be instituted by any citizen. Every citizen of the country has a direct interest that the Constitution

shall be obeyed, and that interest is none the less real and entitled to recognition and protection by the courts that it is not capable of financial computation. Indeed, the very fact that he has no other remedy serves rather, under the established principles governing its issuance, to emphasize his right to this writ. Since the Constitution does not confer original jurisdiction upon the Supreme Court to issue writs of mandamus (see *Marbury vs. Madison*, *supra*), it would be necessary to commence the action in the courts of the District of Columbia. It has been settled since the decision of *Kendall vs. United States*, *supra*, that those courts have jurisdiction to issue the writ of mandamus as an original proceeding. From the decision there an appeal can be taken to the Supreme Court of the United States.

It may be urged that, even conceding the jurisdiction of the courts in a proper case, there is no duty on Congress at the present time, for the reason that the applications from the various State legislatures have not been simultaneous, but have extended over a period of years. There is nothing in the Constitution, however, providing that the applications must be made simultaneously or within a certain period of time. That being so, it is not perceived how either Congress or any other body can place a limit thereon. The very nature of the case would seem to demonstrate the falsity of the proposition that this is necessary. The United States is a nation. The desire for a change in the fundamental instrument of

and co-ordinate branch of the government and that the court had no jurisdiction over his acts. This contention, however, the court overruled, holding that inasmuch as the constitution imposed upon him a specific duty in regard to which he was left no discretion, he could not refuse to perform it, and that, although a legislative officer, it was as much the duty of the courts to compel him to perform the ministerial act as to compel any other officer or person to perform a similar act.

The case of *Valley Paper Company vs. Smoot et al.*, decided by the court of the District of Columbia a short time ago, is also interesting in this connection. In that case it was held that the courts have

the jurisdiction to compel the Congressional committee to perform a duty imposed upon it by law and in regard to which it is left no discretion.

Cf. also *Attorney-General vs. Taggart*, 66 N. H. 362, in which it was held that the court had jurisdiction to compel the lieutenant-governor to perform the duties of governor in the incapacity of the governor, that duty being required by law.

[†]In this connection, however, see the Twelfth Amendment to the Constitution, which may impose a further ministerial duty upon Congress. In determining this question the case of *State ex rel. Benton*, 31 Neb. 169, cited in the preceding note, is important.

UNITED STATES CONSTITUTIONAL CONVENTION

government may be, and in most cases is, of slow growth. The conditions making necessary a change may be felt in one portion of the country many years before they are forced home to the people of a different section. Because it takes a number of years to reach such an agreement, it can hardly be urged that the duty of Congress to respond thereto is thereby abated. Such a proposition seems too obviously fallacious to require extended discussion. The error of the proposition is equally shown in another way. Though the legislature of a State should make application to Congress to call a convention, it is clearly competent for it to withdraw the same at any time before the legislatures of two-thirds of the States have applied, should it change its mind in regard to the necessity therefor. In other words, an application made to Congress and not withdrawn presents a *continuing* request or application. When there are before Congress unwithdrawn applications from the legislatures of two-thirds of the States, their effect, therefore, is the same as if they had all been presented concurrently.

Another question that may be raised is, How extensive would be the authority to propose amendments of a convention called pursuant to this provision? The answer would seem clearly to be that there are no limits. The Constitution imposes none. On the contrary, it confers the most general authority upon the convention. "The Congress . . . shall propose amendments to this Constitution or . . . shall call a convention for proposing amendments." The extent, number, or nature of the amendments which Congress may propose is not limited in any manner; no more is the authority of the convention limited. The legislatures are not required to specify in any particular what amendments are desired. It would seem clear, therefore, that the convention may propose as many amendments and of whatever nature as it may see fit. It is to be borne in mind, however, that all the convention can do is to propose amendments; they acquire no validity until ratified by three-fourths of the States.

While the matter of securing direct election of Senators is probably more important, there are several others which

will almost certainly receive the attention of the convention. One which should be considered is the advisability of providing that, in the future, a constitutional convention shall be called upon the application of less than two-thirds of the States. The Constitution must be essentially a stable instrument—sufficiently stable that it will not be changed by merely passing ideas. But since it operates not only as a grant, but as a limitation of the powers of the government, it must not be so rigid that it cannot be altered to meet the needs of the times, as new and different conditions affecting the national life arise. The Constitution must be above light and whimsical changes, but it must not be so rigid and unyielding that it cannot be moulded to fit the conditions under which the nation actually exists. If it is, it is almost certain to be, not a guaranty of liberty and advancement, but a hindrance to progress; and it may eventually become an instrument of oppression. When a large majority of the people are convinced that the best interests of the nation require a certain change in the Constitution, it should not be within the power of a small minority to block their action. The two requirements of a Constitution just mentioned are of equal importance. The framers of the Constitution recognized this fact, and while making ample provision for the stability of that instrument they also provided a direct means by which it could be amended in response to the voice of the people. At the time of the adoption of the Constitution there were but thirteen States. The concurrence of two-thirds of them was not a matter of very great difficulty. But in the hundred and twenty-three years since the Constitution was framed the country has grown enormously, probably beyond the fondest dreams of any man then living. To-day there are forty-eight States. To secure the concurrence of two-thirds of the States, which was a matter of comparative simplicity then, has become one of the greatest difficulty. It would seem that it might be well to amend Article V. of the Constitution to provide that whenever one-half of the States concur in applying therefor a constitutional convention shall be called.

UNITED STATES CONSTITUTIONAL CONVENTION

The stability of the Constitution is amply guaranteed. The extreme difficulty of securing the concurrence of three-fourths of the States on any proposed change itself insures that no amendment will be adopted without careful and critical analysis. The danger to-day, as our social, industrial, and governmental activities are becoming more and more complex, is that the Constitution will become too far removed from the people, and through its unelasticity and the extreme difficulty of changing it to meet the conditions under which the people actually live will become a hindrance to those advances which are essential to the common good.

Another matter which many feel requires consideration is the power of the federal government to regulate corporations or monopolies in whatever form. New economic conditions within the past half-century have caused, or permitted, the growth of great corporations which have obtained in many instances practical control of many of the necessities of life. Operating through numerous, if not indeed through all the States, no single State can control or even adequately regulate them. The monopoly thus affected is not necessarily injurious. The elimination of competition which most of them effect is an elimination of waste and makes possible cheaper production. The difficulty lies in this: without adequate governmental regulation such corporations, while lessening the cost of production, are able at the same time, through gaining a monopoly on the necessities of life, to increase the price with no limit except "what the tariff will bear." We are gradually coming to realize two basic truths: First, that at least in the great industries of the nation, competition is wasteful and destructive, and that even if it were desirable, it is practically impossible to legislate against such a basic economic principle; second, that monopoly without real (as distinguished from merely nominal) regulation and control means a great increase in the cost to the consumer, and at the same time the amassing of private fortunes so enormous that they are a grave menace to society. This measure of regulation must be secured, and secured promptly. It can probably be

done only by extending somewhat the powers of the federal government. If this be true, then such extension must be made at the earliest possible moment.

These questions, with perhaps some others, will undoubtedly receive the fullest consideration from the convention. The strongest and ablest men in the nation should and probably will be selected by their respective States as delegates to the convention. The gathering of a considerable number of such men, with the careful consideration of basic principles and mutual exchange of ideas which will result, can scarcely fail to be productive of much good.

No attempt was made in the Constitution to provide the rules by which the convention should be governed. As appears from the proceedings of the original constitutional convention already quoted, this was intentionally left to be determined by the subsequent conventions themselves. Nor is any provision made as to the representation of the several States. Following the precedent of the original convention, however, as well as from the very nature of the body as being a convention of the several States, it is indisputable that all are entitled to an equal voice therein. Whether the votes shall be taken by States, as in the original convention, or, the States being equally represented, by individual members, is a matter which it would seem competent for the convention itself to decide.

To show that by the action of a few more States a constitutional convention can be secured, and that when the requisite number of States apply an absolute duty is imposed on Congress to call the convention, which duty can be directly enforced if disregarded by that body, has been the chief purpose of this article. There are many other questions in connection with the general subject of the convention that merit discussion, but it would unduly extend this article to attempt to consider them here. It is to be hoped that during the coming year a sufficient number of States, through their legislatures, will apply therefor to secure the early meeting of the first convention for considering the Constitution since the adoption of that instrument nearly a century and a quarter ago.

UNITED STATES GOVERNMENT AND THE STATES

United States Government and the States.—The following authoritative article on the relation of the States to the federal government, by President Woodrow Wilson, originally appeared in *The North American Review* for May, 1908.

The question of the relation of the States to the federal government is the cardinal question of our constitutional system. At every turn of our national development we have been brought face to face with it, and no definition either of statesmen or of judges has ever quieted or decided it. It cannot, indeed, be settled by the opinion of any one generation, because it is a question of growth, and every successive stage of our political and economic development gives it a new aspect, makes it a new question. The general lines of definition which were to run between the powers granted to Congress and the powers reserved to the States the makers of the Constitution were able to draw with their characteristic foresight and lucidity; but the subject-matter of that definition is constantly changing, for it is the life of the nation itself. Our activities change alike their scope and their character with every generation. The old measures of the Constitution are every day to be filled with new grain as the varying crop of circumstances comes to maturity. It is clear enough that the general commercial, financial, economic interests of the country were meant to be brought under the regulation of the federal government, which should act for all; and it is equally clear that what are the general, commercial, financial, economic interests of the country is a question of fact, to be determined by circumstances which change under our very eyes, and that, case by case, we are inevitably drawn on to include under the established definitions of the law matters new and unforeseen which seem in their magnitude to give to the powers of Congress a sweep and vigor certainly never conceived possible by earlier generations of statesmen, sometimes almost revolutionary even in our own eyes. The subject-matter of this troublesome definition is the living body of affairs.

It is difficult to discuss so critical and fundamental a question calmly and with-

out party heat or bias when it has come once more, as it has now, to an acute stage. Just because it lies at the heart of our constitutional system, to decide it wrongly is to alter the whole structure and operation of our government, for good or for evil; and one would wish never to see the passion of party touch it to distort it. A sobering sense of responsibility should fall upon every one who handles it. No man should argue it this way or that for party advantage. Desire to bring the impartial truth to light must in such a case be the first dictate alike of true statesmanship and of true patriotism. Every man should seek to think of it and to speak of it in the true spirit of the founders of the government.

Almost every great internal crisis in our affairs has turned upon the question of State and federal rights. To take but two instances, it was the central subject-matter of the great controversy over tariff legislation which led to attempted nullification and of the still greater controversy over the extension of slavery which led to the war between the States; and these two controversies did more than any others in our history to determine the scope and character of the federal government.

The principle of the division of powers between State and federal governments is a very simple one when stated in its most general terms. It is that the legislatures of the States shall have control of all the general subject-matter of law, of private rights of every kind, of local interests, and of everything that directly concerns their people as communities—free choice with regard to all matters of local regulation and development, and that Congress shall have control only of such matters as concern the peace and the commerce of the country as a whole. The opponents of the tariff of 1824 objected to the tariff system which Congress was so rapidly building up that it went much beyond the simple and legitimate object of providing the federal government with revenues in such a way as to stimulate without too much disturbing the natural development of the country and was unmistakably intended to guide and determine the whole trend of the nation's economic evolution, preferring the industries

UNITED STATES GOVERNMENT AND THE STATES

of one section of the country to those of another in its bestowal of protection and encouragement and so depriving the States as self-governing communities of all free economic choice in the development of their resources. Congress persisted in its course; nullification failed as even an effectual protest against the power of a government of which General Jackson was the head—never so sure he was right as when he was opposed; and a critical matter, of lasting importance, was decided. The federal government was conceded the power to determine the economic opportunities of the States. It was suffered to become a general providence, to which each part of the country must look for its chance to make lucrative use of its material resources.

The slavery question, though it cut deep into the social structure of a great section of the country and contained such heat as could not, when once given vent, be restrained from breaking into flame, as the tariff controversy had been, was, after all, a no more fundamental question, in its first essential form, than the question of the tariff. Could Congress exclude slavery from the Territories of the United States and from newly formed States? If it could, manifestly the slavery system, once restricted in territory, would in time die of the strictures which bound it. Mr. Lincoln was quite right when he said that no nation could exist half slave and half free. But that was only by consequence. The immediate question was the power of Congress to determine the internal social and economic structure of society in the several States thereafter to be formed. It is not to my present purpose to trace the circumstances and influences which brought on the Civil War. The abolition of slavery by war, though natural, was not the necessary legal consequence of the contention that Congress possessed the power which it had exercised in the constitution of the Northwest Territory and in the enactment of the Missouri Compromise. What happened before the momentous struggle was over came about by the mere logic of human nature, by stress of human passion. What concerns me in the present discussion is that here, again, as in the building up of a fostering tariff, what turned out to be a far-

reaching change in the very conception of federal power had as its central point of controversy the question of the powers of the States as against the powers of the government at Washington. The whole spirit and action of the government were deeply altered in carrying that question one stage further toward a settlement.

And I am particularly interested to point out that here again, as in the tariff question, it was an inevitable controversy, springing, not out of theory, not out of the uneasy ambition of statesmen, but out of mere growth and imperious circumstance. Population was spreading over the great Western areas of the country; new communities were forming, upon which lawyers could lay no binding prescription as to the life they should lead; new Territories were constantly to be organized, new States constantly to be admitted to the Union. A choice which every day assumed new forms was thrust upon Congress. Events gave it its variety, and Congress could not avoid the influences of opinion, which altered as circumstances changed, as it became more and more clear what the nation was to be. It was of the very stuff of daily business, forced upon Congress by the opinion of the country, to answer the questions, What shall these new communities be allowed to do with themselves, what shall they be suffered to make of the nation? May Congress determine, or is it estopped by the reserved powers of the States? The choices of growth cannot be postponed, and they seem always to turn upon some new doubt as to where the powers of the States leave off and the powers of the federal government begin.

And now the question has come upon us anew. It is no longer sectional, but it is all the more subtle and intricate, all the less obvious and tangible in its elements, on that account. It involves, first or last, the whole economic movement of the age and necessitates an analysis which has not yet been even seriously attempted. Which parts of the many-sided processes of the nation's economic development shall be left to the regulation of the States, which parts shall be given over to the regulation of the federal government? I do not propound this as a mere question of choice, a mere

UNITED STATES GOVERNMENT AND THE STATES

question of statesmanship, but also as a question, a very fundamental question, of constitutional law. What, reading our Constitution in its true spirit, neither sticking in its letter nor yet forcing it arbitrarily to mean what we wish it to mean, shall be the answer of our generation to the old question of the distribution of powers between Congress and the States? For us, as for previous generations, it is a deeply critical question. The very stuff of all our political principles, of all our political experience, is involved in it. In this all too indistinctly marked field of right choice our statesmanship shall achieve new triumphs or come to eventual shipwreck.

The old theory of the sovereignty of the States, which used so to engage our passions, has lost its vitality. The war between the States established at least this principle, that the federal government is, through its courts, the final judge of its own powers. Since that stern arbitrament it would be idle, in any practical argument, to ask by what law of abstract principle the federal government is bound and restrained. Its power is "to regulate commerce between the States," and the attempts now made during every session of Congress to carry the implications of that power beyond the utmost boundaries of reasonable and honest inference show that the only limits likely to be observed by politicians are those set by the good sense and conservative temper of the country.

The proposed federal legislation with regard to the regulation of child labor affords a striking example. If the power to regulate commerce between the States can be stretched to include the regulation of labor in mills and factories, it can be made to embrace every particular of the industrial organization and action of the country. The only limitation Congress would observe, should the Supreme Court assent to such obviously absurd extravagances of interpretation, would be the limitations of opinion and of circumstance.

It is important, therefore, to look at the facts and to understand the real character of the political and economic materials of our own day with a clear and statesmanlike vision, as the makers of the

Constitution understood the conditions they dealt with. If the jealousies of the colonies and of the little States which sprang out of them had not obliged the makers of the Constitution to leave the greater part of legal regulation in the hands of the States, it would have been wise, it would even have been necessary, to invent such a division of powers as was actually agreed upon. It is not, at bottom, a question of sovereignty or of any other political abstraction; it is a question of vitality. Uniform regulation of the economic conditions of a vast territory and a various people like the United States would be mischievous, if not impossible. The statesmanship which really attempts it is premature and unwise. Undoubtedly the recent economic development of the country, particularly the development of the last two decades, has obliterated many boundaries, made many interests national and common which until our own day were separate and distinct; but the lines of these great changes we have not yet clearly traced or studiously enough considered. To distinguish them and provide for them is the task which is to test the statesmanship of our generation; and it is already plain that, great as they are, these new combinations of interest have not yet gone so far as to make the States mere units of local government. Not our legal conscience merely, but our practical interests as well, call upon us to discriminate and be careful, with the care of men who handle the vital stuff of a great constitutional system.

The United States are not a single, homogeneous community. In spite of a certain superficial sameness which seems to impart to Americans a common type and point of view, they still contain communities at almost every stage of development, illustrating in their social and economic structure almost every modern variety of interest and prejudice, following occupations of every kind, in climates of every sort that the temperate zone affords. This variety of fact and condition, these substantial economic and social contrasts, do not in all cases follow State lines. They are often contrasts between region and region rather than between State and State. But they are none the

UNITED STATES GOVERNMENT AND THE STATES

less real and are in many instances permanent and ineradicable.

From the first the United States have been socially and economically divided into regions rather than into States. The New England States have always been in most respects of a piece; the Southern States had always more interests in common than points of contrast; and the Middle States were so similarly compounded, even in the day of the erection of the government, that they might without material inconvenience have been treated as a single economic and political unit. These first members of the Union did, indeed, have an intense historical individuality which made them easily distinguishable and rendered it impossible, had any one dreamed of it, to treat them as anything but what they were, actual communities, quick with a character and purpose of their own. Throughout the earlier process of our national expansion States formed themselves, for the most part, upon geographical lines marked out by nature, within the limiting flood of great rivers or the lifted masses of great mountain-chains; with here and there a parallel of latitude for frontier, but generally within plots of natural limit where those who had set up homes felt some natural and obvious tie of political union draw them together. In later years, when States were to be created upon the great plains which stretched their fertile breadths upon the broad mid-surfaces of the continent, the lines chosen for boundaries were those which had been run by the theodolite of the public surveyor, and States began to be disposed upon the map like squares upon a great chess-board, where the human pieces of the future game of politics might come to be moved very much at will, and no distinct economic though many social varieties were to be noted among neighbor commonwealths.

But while division by survey instead of by life and historical circumstance no doubt created some artificial political divisions with regard to which the old theories of separate political sovereignty seemed inapplicable enough, the contrasts between region and region were in no way affected, resemblances were rendered no more striking than the differences which

remained. We have been familiar from the first with groups of States united in interest and character; we have been familiar from the first also with groups of States contrasted by obvious differences of occupation and of development. These differences are almost as marked now as they ever were, and the vital growth of the nation depends upon our recognizing and providing for them. It will be checked and permanently embarrassed by ignoring them.

We are too apt to think that our American political system is distinguished by its central structure, by its President and Congress and courts, which the Constitution of the Union set up. As a matter of fact, it is distinguished by its local structure, by the extreme vitality of its parts. It would be an impossibility without its division of powers. From the first it has been a nation in the making. It has come to maturity by the stimulation of no central force or guidance, but by the abounding self-helping, self-sufficing energy of its parts, which severally brought themselves into existence and added themselves to the Union, pleasing first of all themselves in the framing of their laws and constitutions, not asking leave to exist, but existing first and asking leave afterwards, self-originated, self-constituted, self-confident, self-sustaining, veritable communities, demanding only recognition. Communities develop, not by external, but by internal forces. Else they do not live at all. Our commonwealths have not come into existence by invitation, like plants in a tended garden; they have sprung up of themselves, irrepressible, a sturdy, spontaneous product of the nature of men nurtured in a free air.

It is this spontaneity and variety, this independent and irrepressible life of its communities, that has given our system its extraordinary elasticity, which has preserved it from the paralysis which has sooner or later fallen upon every people who have looked to their central government to patronize and nurture them. It is this, also, which has made our political system so admirable an instrumentality of vital constitutional understandings. Throughout these lectures I have described constitutional government as that which is maintained upon the

UNITED STATES GOVERNMENT AND THE STATES

basis of an intimate understanding between those who conduct government and those who obey it. Nowhere has it been possible to maintain such understandings more intimately or with a nicer adjustment to every variety of circumstance than in the United States. The distribution of the chief powers of government among the States is the localization and specialization of constitutional understandings; and this elastic adaptation of constitutional processes to the various and changing conditions of a new country and a vast area has been the real cause of our political success.

The division of powers between the States and the federal government effected by our federal Constitution was the normal and natural division for this purpose. Under it the States possess all the ordinary legal choices that shape a people's life. Theirs is the whole of the ordinary field of law: the regulation of domestic relations and of the relations between employer and employé, the determination of property rights and of the validity and enforcement of contracts, the definition of crimes and their punishments, the definition of the many and subtle rights and obligations which lie outside the fields of property and contract, the establishment of the laws of incorporation and of the rules governing the conduct of every kind of business. The presumption insisted upon by the Courts in every argument with regard to the federal government is that it has no power not explicitly granted it by the federal Constitution or reasonably to be inferred as the natural or necessary accompaniment of the powers there conveyed to it; but the presumption with regard to the powers of the States they have always held to be of exactly the opposite kind. It is that the States of course possess every power that government has ever anywhere exercised, except only those powers which their own constitutions or the Constitution of the United States explicitly or by plain inference withhold. They are the ordinary governments of the country; the federal government is its instrument only for particular purposes.

Congress is, indeed, the immediate government of the people. It does not govern the States, but acts directly upon indi-

viduals, as directly as the governments of the States themselves. It does not stand at a distance and look on—to be ready for an occasional interference—but is the immediate and familiar instrument of the people in everything that it undertakes, as if there were no States. The States do not stand between it and the people. But the field of its action is distinct, restricted, definite.

We are not concerned in our present discussion with its powers as representative of the people in regulating the foreign affairs of the country. The discussion of the relation of the States to the federal government does not touch that field. About it there has never been doubt or debate. Neither is the power of the federal government to tax, or to regulate the military establishments of the country any longer in dispute, even though the federal government use its power to tax to accomplish many an indirect object of economic stimulation or control which touches the independent industrial choices of the States very nearly. The one source from which all debatable federal powers of domestic regulation now spring is the power to regulate commerce between the States.

The chief object of the Union and of the revision of the Articles of Confederation was undoubtedly commercial regulation. It was not political but economic warfare between the States which threatened the existence of the new Union and made every prospect of national growth and independence doubtful—the warfare of selfish commercial regulation. It was intended, accordingly, that the chief, one might almost say the only, domestic power of Congress in respect of the daily life of the people should be the power to regulate commerce.

It seemed a power susceptible of very simple definition at the first. Only in our own day of extraordinary variation from the older and simpler types of industry has it assumed aspects both new and without limit of variety. It is now no longer possible to frame any simple or comprehensive definition of "commerce." Above all is it difficult to distinguish the "commerce" which is confined within the boundaries of a single State and subject to its domestic regulation from

UNITED STATES GOVERNMENT AND THE STATES

that which passes from State to State and lies within the jurisdiction of Congress. The actual interchange of goods, which, strictly speaking, is commerce, within the narrow and specific meaning of the term, is now so married to their production under our great modern industrial combinations, organization, and community of interest have so obscured the differences between the several parts of business which once it was easy to discriminate, that the power to regulate commerce subtly extends its borders every year into new fields of enterprise and pries into every matter of economic effort.

Added to this doubt and difficulty of analysis which makes it a constant matter of debate what the powers of Congress are, is the growing dissatisfaction with the part the States are playing in the economic life of the day. They either let the pressing problems of the time alone and attempt no regulation at all, however loudly opinion and circumstance itself may call for it, or they try every half-considered remedy, embark upon a thousand experiments, and bring utter confusion upon the industry of the country by contradicting and offsetting each other's measures. No two States act alike. Manufactures and carriers who serve commerce in many States find it impossible to obey the laws of all, and the enforcement of the laws of the States in all their variety threatens the country with a new war of conflicting regulations as serious as that which made the Philadelphia convention of 1787 necessary and gave us a new federal Constitution. This conflict of laws in matters which vitally interest the whole country and in which no State or region can wisely stand apart to serve any particular interest of its own constitutes the greatest political danger of our day. It is more apt and powerful than any other cause to bring upon us radical and ill-considered changes. It confuses our thinking upon essential matters and makes us hasty reformers out of mere impatience. We are in danger of acting before we clearly know what we want or comprehend the consequences of what we do—in danger of altering the character of the government in order to escape a temporary inconvenience.

We are an industrial people. The development of the resources of the country, the command of the markets of the world, is for the time being more important in our eyes than any political theory or lawyer's discrimination of functions. We are intensely "practical," moreover, and insist that every obstacle, whether of law or fact, be swept out of the way. It is not the right temper for constitutional understandings. Too "practical" a purpose may give us a government such as we never should have chosen had we made the choice more thoughtfully and deliberately. We cannot afford to belie our reputation for political sagacity and self-possession by any such hasty processes as those into which such a temper of mere impatience seems likely to hurry us.

The remedy for ill-considered legislation by the States, the remedy alike for neglect and mistake on their part, lies, not outside the States, but within them. The mistakes which they themselves correct will sink deeper into the consciousness of their people than the mistakes which Congress may rush in to correct for them, thrusting upon them what they have not learned to desire. They will either themselves learn their mistakes by such intimate and domestic processes as will penetrate very deep and abide with them in convincing force, or else they will prove that what might have been a mistake for other States or regions of the country was no mistake for them; and the country will have been saved its wholesome variety. In no case will their failure to correct their own measures prove that the federal government might have forced wisdom upon them.

There is, however, something else that comes to the surface, and that explains not a little of our present dissatisfaction with State legislation upon matters of vital national importance. Their failure to correct their own processes may prove that there is something radically wrong with the structure and operation of their governments—that they have ceased to be sensitive and efficient instruments for the creation and realization of opinion—the real function of constitutional governments.

It is better to learn the true political lesson than merely to improve business.

UNITED STATES GOVERNMENT AND THE STATES

There is something involved which is deeper than the mere question of the distribution of legislative powers within our federal system. We have come to the test of the intimate and detailed processes of self-government to which it was supposed that our principles and our experience had committed us. There are many evidences that we are losing confidence in our State legislatures, and yet it is evident that it is through them that we attempt all the more intimate measures of self-government. To lose faith in them is to lose faith in our very system of government, and that is a very serious matter. It is this loss of confidence in our local legislatures that has led our people to give so much heed to the radical suggestions of change made by those who advocate the use of the initiative and the referendum in our processes of legislation, the virtual abandonment of the representative principle, and the attempt to put into the hands of the voters themselves the power to initiate and negative laws—in order to enable them to do for themselves what they have not been able to get satisfactorily done through the representatives they have hitherto chosen to act for them.

Such doubts and such consequent proposals of reform should make us look deeper into this question than we have hitherto looked. It may turn out, upon examination, that what we are really dissatisfied with is not the present distribution of powers between the State and federal authorities, but the character of our State governments. If they were really governments by the people we should not be dissatisfied with them. We are impatient of State legislatures because they seem to us less representative of the thoughtful opinion of the country than Congress is. We know that our legislatures do not think alike, but we are not sure that our people do not think alike. If there is a real variety of opinion among our people in the several regions of the country, we would be poor lovers of democratic self-government were we to wish to see those differences overridden by the majorities of a central legislature. It is to be hoped that we still sufficiently understand the real processes of political life to know that a growing country must

grow, that opinion such as government can be based upon develops by experience, not by authority, that a region forced is a region dissatisfied, and that spontaneous is better, more genuine, more permanent than forced agreement.

The truth is that our State governments are many of them no longer truly representative governments. We are not, in fact, dissatisfied with local representative assemblies and the government which they impose; we are dissatisfied, rather, with regulations imposed by commissions and assemblies which are no longer representative. It is a large subject, of many debatable parts, and I can only touch upon it here, but the fact is that we have imposed an impossible task upon our voters, and that because it is impossible they do not perform it. It is impossible for the voters of any busy community actually to pick out or in any real sense choose the very large number of persons we call upon them under our present State constitutions to elect. They have neither the time nor the quick and easy means of co-operation which would enable them to make up the long lists of candidates for offices, local and national, upon which they are expected to act. They must of necessity leave the selection to a few persons who, from one motive or another, volunteer to make a business of it. These are the political bosses and managers whom the people obey and affect to despise. It is unjust to despise them. Under a system of innumerable nominations they are indispensable. A system of so-called popular elections like ours could not be operated successfully without them. But it is true that by their constant and professional attention to the business of nomination a real popular choice of candidates is done away with entirely, and that our State officers and legislators are in effect appointed, not elected. The question at an election is only which set of appointees shall be put into office, those appointed by the managers and bosses of this party or of that. It is this, whether our people are distinctly conscious of it or not, which has so seriously impaired their confidence in the State legislatures and which has made them look about for new means by which to obtain a real choice in affairs.

Members of Congress are themselves

UNITED STATES GOVERNMENT AND THE STATES

voted for on the lists which the local managers prepare, are themselves appointed to their candidacy as the candidates for local functions are, but, because they are relatively few in number and their office national, attention is more or less concentrated upon them. There is a more general interest in their selection by which party managers are sure to be somewhat checked and guided. After their election, moreover, they become members of an assembly highly organized and disciplined, and act under a very strict party responsibility in which the personal force and character of the Speaker of the House plays a greater part than their own. The man by whom they are led is scarcely less conspicuous as a national figure than the President himself, and they are but wheels in a great piece of machinery which is more sensitive to opinion in ways which local managers in no sort control. The opinion of the whole country beats upon them. The country feels, therefore, that, however selected, they are in some sense more representative, more to be depended on to register its thoughtful judgments, than the members of State legislatures are.

It is for this reason as much as for any other that the balance of powers between the States and the federal government now trembles at an unstable equilibrium and we hesitate into which scale to throw the weight of our purpose and preference with regard to the legislation by which we shall attempt to thread the maze of our present economic needs and perplexities. It may turn out that what our State governments need is not to be sapped of their powers and subordinated to Congress, but to be reorganized along simpler lines which will make them real organs of popular opinion. A government must have organs; it cannot act inorganically, by masses. It must have a lawmaking body; it can no more make laws through its voters than it can make them through its newspapers.

It would be fatal to our political vitality really to strip the States of their powers and transfer them to the federal government. It cannot be too often repeated that it has been the privilege of separate development secured to the several regions of the country by the Constitution, and

not the privilege of separate development only, but also that other more fundamental privilege that lies back of it, the privilege of independent local opinion and individual conviction, which has given speed, facility, vigor, and certainty to the processes of our economic and political growth. To buy temporary ease and convenience for the performance of a few great tasks of the hour at the expense of that would be to pay too great a price and to cheat all generations for the sake of one.

Undoubtedly the powers of the federal government have grown enormously since the creation of the government; and they have grown for the most part without amendment of the Constitution. But they have grown in almost every instance by a process which must be regarded as perfectly normal and legitimate. The Constitution cannot be regarded as a mere legal document, to be read as a will or a contract would be. It must of the necessity of the case be a vehicle of life. As the life of the nation changes, so must the interpretation of the document which contains it change, by a nice adjustment determined, not by the original intention of those who drew the paper, but by the exigencies and the new aspects of life itself. Changes of fact and alterations of opinion bring in their train actual extensions of community of interest, actual additions to the catalogue of things which must be included under the general terms of the law. The commerce of great systems of railway is of course not the commerce of wagon roads, the only land commerce known in the days when the Constitution was drafted. The common interests of a nation bound together in thought and interest and action by the telegraph and the telephone, as well as by the rushing mails which every express train carries, have a scope and variety, an infinite multiplication and intricate interlacing of which a simpler day can have had no conception. Every general term of the Constitution has come to have a meaning as varied as the actual variety of the things which the country now shares in common.

The character of the process of constitutional adaptation depends first of all upon the wise or unwise choice of states-

UNITED STATES GOVERNMENT AND THE STATES

men, but ultimately and chiefly upon the opinion and purpose of the courts. The chief instrumentality by which the law of the Constitution has been extended to cover the facts of national development has been judicial interpretation, the decisions of the courts. The process of formal amendment of the Constitution was made so difficult by the provisions of the Constitution itself that it has seldom been feasible to use it; and the difficulty of formal amendment has undoubtedly made the courts more liberal, not to say more lax, in their interpretation than they would otherwise have been. The whole business of adaptation was theirs, and they have undertaken it with open minds, sometimes even with boldness and a touch of audacity. But, though they have sometimes been lax, though they have sometimes yielded, it may be, to the pressure of popular agitation and of party interest, they have not often overstepped the bounds of legitimate extension. By legitimate extension I mean extension which does not change the character of the federal power, but only its items—which does not make new kinds, but only new particulars of power.

The members of courts are necessarily men of their own generation: we would not wish to have them men of another. Constitutional law, as well as statesmanship, must look forward, not backward; and, while we should wish the courts to be conservative, we should certainly be deeply uneasy were they to hold affairs back from their natural alteration. Change as well as stability may be conservative. Conservative change is conservative, not of prejudices, but of principles, of established purposes and conceptions, the only things which in government or in any other field of action can abide. Conservative progress is a process, not of revolution, but of modification. In our own case and in the matter now under discussion it consists in a slowly progressive modification and transfer of functions as between the States and the federal government along the lines of actual development, along the lines of actual and substantial alterations of interest and of that national consciousness which is the breath of all true amendment—and not along lines of party or individual purpose,

nor by way of desperate search for remedies for existing evils.

No doubt courts must "make" laws for their own day, must have the insight which adapts law to its uses rather than its uses to it, must sometimes venture upon decisions which have a certain touch of statesmanlike initiative in them. We shall often find ourselves looking to them for strong and fearless opinions. But there are two kinds of "strong" opinions, as a distinguished English jurist long ago pointed out. There are those which are strong with the strength of insight and intelligence and those which are strong with the mere strength of will. The latter sort all judges who act with conscience, mindful of their oaths of office, should eschew as they would eschew the actual breaking of law. That the federal courts should have such a conscience is essential to the integrity of our whole national action. Actual alterations of interest in the make-up of our national life, actual, unmistakable changes in our national consciousness, actual modifications in our national activities such as give a new aspect and significance to the well-known purposes of our fundamental law, should of course be taken up into decisions which add to the number of things of which the national government must take cognizance and regulative control. That is a function of insight and intelligence. The courage it calls for on the part of the courts is the courage of conviction. But they are, on the other hand, called on to display the more noble courage which defends ancient conviction and established principle against the clamor, the class interests, and the changeable moods of parties. They should never permit themselves wilfully to seek to find in the phrases of the Constitution remedies for evils which the federal government was never intended to deal with.

Moral and social questions originally left to the several States for settlement can be drawn into the field of federal authority only at the expense of the self-dependence and efficiency of the several communities of which our complex body politic is made up. Paternal morals, morals enforced by the judgment and choices of the central authority at Washington, do not and cannot create vital

UNITED STATES GOVERNMENT AND THE STATES

habits or methods of life unless sustained by local opinion and purpose, local prejudice and convenience—unless supported by local convenience and interest; and only communities capable of taking care of themselves will, taken together, constitute a nation capable of vital action and control. You cannot atrophy the parts without atrophying the whole. Deliberate adding to the powers of the federal government by sheer judicial authority, because the Supreme Court can no longer be withstood or contradicted in the States, both saps the legal morality upon which a sound constitutional system must rest and deprives the federal structure as a whole of the vitality which has given the Supreme Court itself its increase of power. It is the alchemy of decay.

It would certainly mean that we had acquired a new political temper, never hitherto characteristic of us, that we had utterly lost confidence in what we set out to do, were we now to substitute abolition for reform—were we by degrees to do away with our boasted system of self-government out of mere impatience and disgust, like those who got rid of an instrument they no longer knew how to use. There are some hopeful signs that we may be about to return to the better way of a time when we knew how to restrict government and adapt it to our uses in accordance with principles we did not doubt, but adhered to with an ardent fervor which was the best evidence of youth and virility. We have long been painfully conscious that we have failed in the matter of city government. It is an age of cities, and if we cannot govern our cities we cannot govern at all. For a little while we acted as if in despair. We began to strip our city governments of their powers and to transfer them to State commissions or back to the legislatures of the States, very much as we are now stripping the States of their powers and putting them in the hands of federal commissions. The attempt was made to put the police departments of some of our

cities, for example, in the hands of State officers, and to put the granting of city franchises back into the hands of the central legislature of the State, in the hope, apparently, that a uniform regulation of such things by the opinion of the whole State might take the place of corrupt control by city politicians. But it did not take us long, fortunately, to see that we were moving in the wrong direction. We have now turned to the better way of reconsidering the whole question of the organization of city governments, and are likely within a generation to purify them by simplifying them, to moralize them by placing their government in the hands of a few persons who can really be selected by popular preference instead of by the private processes of nomination by party managers, and who, because few and conspicuous, can really be watched and held to a responsibility which they will honor because they cannot escape.

It is to be hoped that we shall presently have the same light dawn upon us with regard to our State governments, and, instead of upsetting an ancient system, hallowed by long use and deep devotion, revitalize it by reorganization. And that, not only because it is an old system long beloved, but also because we are certified by all political history of the fact that centralization is not vitalization. Moralization is by life, not by statute, by the interior impulse and experience of communities, not by fostering legislation which is merely the abstraction of an experience which may belong to a nation as a whole or to many parts of it without having yet touched the thought of the rest anywhere to the quick. The object of our federal system is to bring the understandings of constitutional government home to the people of every part of the nation, to make them part of their consciousness as they go about their daily tasks. If we cannot successfully effect its adjustments by the nice local adaptations of our older practice, we have failed as constitutional statesmen.

UNITED STATES TERRITORIAL EXPANSION

The Territorial Expansion of the United States.—Under this title two articles are

given. The first, by John Bassett Moore, LL.D., Professor of Diplomacy and Inter-

UNITED STATES TERRITORIAL EXPANSION

national Law, Columbia University, is on *The Territorial Expansion of the United States*; and the second, by Professor Albert Bushnell Hart, Ph.D., Professor of History, Harvard University, is on *What the Founders of the Union Thought Concerning Territorial Problems*.

As conventionalized in the annual messages of Presidents to Congress, the American people are distinguished chiefly by their peaceful disposition and their freedom from territorial ambitions. Nevertheless, in spite of these quiet propensities, it has fallen to their lot, since they forcibly achieved their independence, to have had four foreign wars, three general and one limited, and the greatest civil war in history, and to have acquired a territorial domain almost five times as great as the respectable endowment with which they began their national career. In reality, to the founders of the American republic the question of territorial expansion did not present itself as a matter of speculation, or even of choice. There was not a single European power having possessions in America that did not lay claim to more territory than it had effectively occupied, nor was there a single one whose claims were not contested by some other power; and these contests were interwoven with the monopolistic struggle then in progress for colonial commerce and navigation. The Spaniards and the Portuguese, the English and the French, the Swedes and the Dutch, contended with one another in Europe as well as in America for empire on the American continents. Their colonists knew no rule of life but that of conflict; and they regarded the extension of their boundaries as a measure of self-defence rather than of aggression. We have seen that, by the treaty of alliance with France of 1778, the remaining British possessions in North America, if they should be wrested from the mother country, were to be "confederated with or dependent upon" the United States; and in harmony with this stipulation, provision was made in the Articles of Confederation (Art. XI.) for the full admission of Canada into the Union. No other colony was to be so admitted without the consent of nine States; and unless

they consented the colony, if seized, was to remain in a "dependent" position. With the independence of the United States a new force entered into the territorial contests in America, but it did not stay their course. On the north of the new republic lay the possessions of Great Britain; on the west, the possessions of France; on the south, the possessions of Spain. With all these powers there were questions of boundary, while the colonial restrictions in commerce and in navigation were as so many withes fettering the limbs of the young giant.

It was in order to obtain relief from such conditions that the United States acquired Louisiana. To the inhabitants of the West the Mississippi River was, as Madison once declared, the Hudson, the Delaware, the Potomac, and all the navigable rivers of the Atlantic States formed into one stream. During the dark hours of the American Revolution the Continental Congress seemed to be ready to yield to Spain, in return for her alliance, the exclusive right to navigate the Mississippi; but fortunately this was not done. After the re-establishment of peace Spain continued to maintain her exclusive claims. But the opposition to them in the United States steadily grew stronger and louder; and at length, on October 27, 1795, encompassed by many perils in her foreign relations, Spain conceded to the United States the free navigation of the Mississippi, together with the privilege of depositing merchandise at New Orleans and thence exporting it without payment of duty. The incalculable advantage of this arrangement was daily growing more manifest, when, early in 1801, rumors began to prevail that Spain had ceded both Louisiana and the Floridas to France. As a neighbor Spain, because of the internal weakness of her government and the consequent unaggressiveness of her foreign policy, was not feared; but an apprehension had from the first been exhibited by the United States as to the possibility of being hemmed in by colonies of England and of France. If the rumored cession should prove to be true, the arrangement with Spain with regard to the Mississippi was threatened with extinc-

UNITED STATES TERRITORIAL EXPANSION

tion. Jefferson was therefore hardly extravagant when he declared that the cession of Louisiana and the Floridas by Spain to France would completely reverse all the political relations of the United States, and would render France, as the possessor of New Orleans, "our natural and habitual enemy."

The treaty of cession was, in fact, signed at San Ildefonso on October 1, 1800; but it was not published, and even its existence was officially denied. It did not embrace the Floridas, but included the whole of the vast domain then known as Louisiana. The administration at Washington, though in the dark as to what had actually been done, felt the necessity of action. It desired, if possible, to prevent the transfer of the territory; or, if this could not be accomplished, to obtain from France the Floridas, if they were included in the cession, or at least West Florida, so as to give the United States a continuous stretch of territory on the eastern bank of the Mississippi. With these objects in view, Jefferson appointed Robert R. Livingston as minister to France. Livingston set out on his mission early in October, 1801. On his arrival in Paris he soon became convinced that the cession of Louisiana, if not of the Floridas, had been concluded; and he hinted to Talleyrand, who was then Minister of Foreign Affairs, that Louisiana might be transferred to the United States in payment of debts due by France to American citizens. Talleyrand replied, "None but spendthrifts satisfy their debts by selling their lands," and then, after a pause, blandly added, "But it is not ours to give." Livingston was not deceived by this evasion. On the contrary, he endeavored to obtain, by appeal to the First Consul himself, Napoleon, the cession, not of the whole, but of a part of Louisiana, or at any rate an assurance that the transfer of the territory by Spain to France would not be permitted to disturb the arrangement as to the use of the Mississippi. On February 11, 1802, Talleyrand informed Livingston that he had been instructed by the First Consul to give the most positive assurance on this subject; but it had barely been given when a report reached Washington that

the Spanish intendant at New Orleans had suspended the right of deposit. It was soon learned that the suspension was not authorized by the Spanish government, but the act of the intendant gave rise to energetic discussion in Congress. A resolution was adopted by the House declaring that the stipulated rights of the United States in the Mississippi would be inviolably maintained, while a resolution was offered in the Senate to authorize the President to take forcible possession of such places as might be necessary to secure their full enjoyment. The state of public feeling was such that every branch of the government felt obliged to take measures not only to preserve existing rights, but also, if possible, to enlarge and safeguard them. With this end in view, James Monroe was joined with Livingston in an extraordinary commission to treat with France, and with Charles Pinckney in a like commission to treat, if necessary, with Spain. The specific objects of the mission, as defined in the instructions given by Madison, as Secretary of State, on March 2, 1803, were the cession to the United States of the island of New Orleans and the Floridas.

Meanwhile Livingston had, if possible, redoubled his exertions. His favorite plan was to obtain from France the cession of the island of New Orleans and all that part of Louisiana lying northward of the Arkansas River; and he also urged the cession of West Florida if France had obtained it from Spain. On Monday, April 11, he held with Talleyrand a memorable and startling interview. Livingston was expatiating upon the subject of New Orleans when Talleyrand quietly inquired whether the United States desired "the whole of Louisiana." Livingston answered that their wishes extended only to New Orleans and the Floridas, though policy dictated that France should also cede the country above the river Arkansas; but Talleyrand observed that if they gave New Orleans, the rest would be of little value, and asked what the United States would "give for the whole." Livingston suggested the sum of 20,000,000 francs, provided the claims of American citizens were paid. Talleyrand declared the offer

UNITED STATES TERRITORIAL EXPANSION

too low, but disclaimed having spoken of the matter by authority. In reality Napoleon had, on the preceding day, announced to two of his ministers his final resolution. The expedition to Santo Domingo had miserably failed; colonial enterprises appeared to be no longer practicable; war with England was at hand; and it seemed wiser to sell colonies than go down with them in disaster. In this predicament Napoleon decided to sell to the United States not only New Orleans, but the whole of Louisiana, to prevent their capture by England, and only a few hours before the interview between Talleyrand and Livingston was held had instructed Barbé-Marbois, his Minister of Finance, to negotiate the sale.

Monroe arrived in Paris on April 12. On the next day Marbois informed Livingston that Napoleon had authorized him to say that if the Americans would give 100,000,000 francs and pay their own claims they might "take the whole country." Noting Livingston's surprise at the price, Marbois eventually suggested that the United States should pay to France the sum of 60,000,000 francs and assume the claims of its own citizens to the amount of 20,000,000 more. Livingston declared that it was in vain to ask a thing so greatly beyond their means, but promised to consult with Monroe. The American plenipotentiaries were thus confronted with a momentous question, concerning which in its full extent their instructions did not authorize them to treat; but properly interpreting the purposes of their government and the spirit of their countrymen, they promptly and boldly assumed the responsibility. They accepted Marbois's terms, excessive as they at first seemed, and took the whole province. Speaking in a prophetic strain, Livingston, when he had affixed his name to the treaty of cession, exclaimed: "We have lived long, but this is the noblest work of our lives. . . . To-day the United States take their place among the powers of the first rank. . . . The instrument we have signed will cause no tears to flow. It will prepare centuries of happiness for innumerable generations of the human race." Time has verified Livingston's prevision. The purchase of Louisiana has contributed more than any other

territorial acquisition to make the United States what it is to-day.

Though the whole of Louisiana was ceded, its limits were undefined. The province was retroceded by Spain to France in 1800 "with the same extent that it now has in the hands of Spain, and that it had when France possessed it"; and by the treaty of April 30, 1803, the territory was ceded to the United States "in the same manner," but the boundaries had never been precisely determined. Talleyrand declared that the most eastern boundary was the river Iberville, while Livingston and Monroe assured their government that the cession extended to the river Perdido, and therefore embraced a large part of West Florida. Acting upon this assurance, Congress authorized the President in his discretion to erect "the bay and river Mobile" and the adjacent territory into a customs district; but Spain strongly protested, and the execution of the measure was held in suspense. In the summer of 1810, however, a revolution took place in West Florida. Baton Rouge was seized; the independence of the province was declared; and an application was made for its admission into the Union. The President repulsed this application, but occupied the territory, as far as the river Pearl, as part of the Louisiana Purchase. The country lying between that stream and the Perdido was permitted still to remain in the possession of Spain.

On January 3, 1811, President Madison, incited by the political situation in America as well as in Europe, sent to Congress a secret message, in which he recommended that the executive be authorized to take temporary possession of any part of the Floridas, in certain contingencies. As to West Florida, Congress had already clothed the executive with extensive powers; but as East Florida unquestionably still belonged to Spain, Congress authorized the President to occupy all or any part of the country, either under arrangements with the local authorities or in case a foreign government should attempt to seize it. Under this act, East Florida was taken possession of all the way from Fernandina to St. Augustine; but the manner in which

UNITED STATES TERRITORIAL EXPANSION

it was done was disapproved by the government at Washington, and in May, 1813, the country was finally evacuated by the American forces. During the war of 1812 West Florida was the scene of hostilities between the British and the American forces, and in 1817 and 1818 it was the theatre of the famous Seminole War. Meanwhile the government of the United States was endeavoring to obtain from Spain the entire relinquishment of her provinces. The negotiations, which were conducted on the part of the United States by John Quincy Adams, were brought to a close by the treaty of February 22, 1819, by which Spain ceded to the United States not only the Floridas, but also all the Spanish titles north of the forty-second parallel of north latitude from the source of the Arkansas River to the Pacific Ocean. In return, the United States agreed to pay the claims of its citizens against Spain to an amount not exceeding \$5,000,000, and to indemnify the Spanish inhabitants of the Floridas for injuries suffered at the hands of American forces, besides granting to Spanish commerce in the ceded territories, for the term of twelve years, exceptional privileges.

While the United States retained, under the treaty of 1819, all the territory to the eastward that it claimed as part of Louisiana, it relinquished by the same treaty its claim to the imperial domain called Texas, a province long in dispute between France and Spain, and after 1803 between Spain and the United States. Only a brief time, however, elapsed when efforts began to be made to recover Texas, either in whole or in part. Two such attempts were made during the Presidency of John Quincy Adams, in 1825 and 1827. The effort was renewed by President Jackson in 1829 and again in 1833. In August, 1835, the American minister in Mexico was directed to persevere in the task, and also to offer half a million dollars for the bay of San Francisco and certain adjacent territory as a resort for American vessels in the Pacific. On March 2, 1836, the people of Texas, through a convention of delegates, declared their independence. In the following year Presi-

dent Van Buren repelled an overture for annexation. The independence of Texas was, however, acknowledged not only by the United States, but also by France and Great Britain; and treaties were made with Texas by all those powers. On April 12, 1844, a treaty of annexation was concluded at Washington. This treaty having failed in the Senate, Congress, by a joint resolution approved March 1, 1845, took action looking to the admission of Texas into the Union as a State. The terms offered in the resolution were accepted by Texas, and by a joint resolution of Congress approved December 29, 1845, the admission was formally accomplished.

Six months after the annexation of Texas the long dispute as to the Oregon territory was brought to a close. This territory was bounded, according to the claim of the United States, by the forty-second parallel of north latitude on the south, by the line of $54^{\circ} 40'$ on the north, and by the Rocky or Stony Mountains on the east. It embraced, roughly speaking, an area of 600,000 square miles. The claim of the United States was founded upon the discovery by Captain Robert Gray, of the American ship *Columbia*, in 1792, of the River of the West, which he named from his ship the Columbia River; the exploration of the main branch of that river by Lewis and Clarke; the establishment of the fur-trading settlement of Astoria by John Jacob Astor in 1811, and its restoration to the United States under the Treaty of Ghent; and finally the acquisition in 1819 of all the territorial rights of Spain on the Pacific above 42° of north latitude. By the Democratic national platform of 1844 the title of the United States to the whole of Oregon was declared to be "clear and unquestionable." This declaration was popularly interpreted to mean "fifty-four-forty or fight"; but on June 15, 1846, under the shadow of the Mexican War, the dispute was terminated by a nearly equal division of the territory along the forty-ninth parallel of north latitude.

This title had barely been assured when, as the result of the war with Mexico, the United States, by the treaty signed on its behalf by Nicholas P. Trist, in defiance of instructions, at Guadalupe

UNITED STATES TERRITORIAL EXPANSION

Hidalgo, on February 2, 1848, came into possession of California and New Mexico. In consideration of these cessions the United States paid to Mexico \$15,000,000 and assumed the payment of claims of American citizens against Mexico to an amount not exceeding \$3,250,000. The acquisitions thus made were enlarged by the convention of December 30, 1853, by which Mexico, for the sum of \$10,000,000, released the United States from liability on account of certain stipulations of the treaty of 1848 and ceded the Mesilla Valley.

By the treaty signed at Washington on March 30, 1867, the Emperor of Russia, in consideration of the sum of \$7,200,000, conveyed to the United States all his "territory and dominion" in America. Many strange conjectures have been made as to the motives of this transaction. It has been suggested that it was merely a cover for the reimbursement to Russia of the expenses of her "friendly naval demonstration" during the American civil war. This explanation may be placed in the category of the grotesque. Robert J. Walker has been given as authority for the statement that the Emperor Nicholas was ready to give Alaska to the United States during the Crimean War if the United States would, in spite of the treaty of 1846, reassert its claim to the whole of Oregon. In reality the territory was of comparatively small value to Russia, who had for years leased an important part of the coast to the Hudson's Bay Company. In the hands of the United States its potential value was obviously greater.

The acquisition of the Hawaiian Islands, under the joint resolution of Congress of July 7, 1898, marked the natural consummation of the special relations that had long subsisted between the United States and that island group. As early as 1853 the United States, while William L. Marcy was Secretary of State, sought to annex the islands. A treaty of annexation was negotiated, but, as its form was unacceptable to the United States, it was put aside for a treaty of reciprocity. This treaty failed to receive the approval of the Senate, but the agitation for annexation or reciprocity continued; and at length, on January 30, 1875, a reciprocity treaty was concluded by which the islands

were virtually placed under an American protectorate. This treaty was renewed in 1887, the United States then acquiring the right to establish a naval station in the harbor of Pearl River. On February 14, 1893, a treaty of annexation was signed at Washington, but on the change of administration it was withdrawn from the Senate. Another treaty of annexation, signed on June 16, 1897, was still before the Senate when the joint resolution was passed by which the acquisition was definitely accomplished.

The war with Spain opened a new vista. Even the remotest of the Spanish possessions in the West Indies fell within the conception of America, but the Spanish possessions in the Far East lay beyond the accustomed range of American political thought. For some weeks after the destruction of the Spanish fleet at Manila the views of the United States seemed scarcely to extend beyond the possible acquisition of a naval station in the Philippines for strategic purposes. The desire for a naval station, however, soon grew into the desire for an island—perhaps the island of Luzon. When news came of the capture of Manila by the American forces, with some American casualties, the desire for the whole group received a marked impulse. In his instructions to the American peace commissioners at Paris, President McKinley said that the United States would not be content with "less than" the island of Luzon. More than two months elapsed before instructions were given to take the whole group; and even then, as the records show, the American commissioners were divided on the question. For my own part, I venture to express the opinion that the problem was simplified by taking all the islands. Though the group is vast in extent, it is physically continuous, and if a considerable part of it had been retained by Spain, the dangers attendant upon native revolt and discontent would have been incalculably increased. The acquisition of Porto Rico and other Spanish islands in the West Indies provoked no division of opinion.

There is no incident in the history of the United States that better prepares us to understand the acquisition of the Philippines than the course of the govern-

UNITED STATES TERRITORIAL EXPANSION

ment towards the Samoan Islands. As early as 1853, if not earlier, the United States was represented at Apia by a commercial agent; but the islands and their affairs attracted little attention till 1872, when the great chief of the bay of Pago-Pago (pronounced Pango-Pango), in the island of Tutuila, desirous of obtaining the protection of the United States, granted to the government the exclusive privilege of establishing a naval station in that harbor. A special agent, named Steinberger, was then despatched to Samoa, and, after making a report, he was sent back to convey to the chiefs a letter from President Grant and some presents. Subsequently he set up, on his own responsibility, a government in the islands and administered it. But as ruler of Samoa he fell into difficulties, and, with the concurrence of the American consul, was deported on a British man-of-war. On January 16, 1878, a treaty between the United States and Samoa was concluded at Washington, by which the privileges of the United States in the harbor of Pago-Pago were confirmed, and by which it was provided that, if differences shall arise between the Samoan government and any other government in amity with the United States, the latter will "employ its good offices for the purpose of adjusting those differences upon a satisfactory and solid foundation." It was under this clause that the conference, which was held in Washington in June and July, 1887, between Mr. Bayard, as Secretary of State, and the British and German ministers, on Samoan affairs, was brought about. The conference failed to produce an agreement. Germany intervened in the islands and became involved in hostilities with a part of the natives. Steps were taken to protect American interests, and the relations between the United States and Germany had become decidedly strained, when, on the invitation of Prince Bismarck, the sessions of the conference were resumed at Berlin. They resulted in the treaty of June 14, 1889, by which the islands were placed under the joint protection and administration of the three powers. The cumbersome system of tripartite government thus established signally failed; and at length, by a treaty between the three powers, concluded on December 2, 1899,

Tutuila and the adjacent islands, east of longitude 171° west of Greenwich, passed under the jurisdiction of the United States, while Upolu and Savaii, and other islands west of that meridian, were left to Germany. The significance of the Samoan incident lies, however, not in the mere division of territory, but in the disposition shown by the United States, long before the acquisition of the Philippines, to have a voice in determining the fate of a remote island group in which American commercial interests were so slight as to be scarcely appreciable.

Besides the annexations already described, the United States has acquired or assumed jurisdiction over many islands in various parts of the world. In 1850 the cession was obtained from Great Britain of Horseshoe Reef, in Lake Erie, for the purposes of a lighthouse. In 1867 Brooks or Midway Islands, lying 1100 miles west of Honolulu, were formally occupied by the commander of the U.S.S. *Lackawanna*. In like manner the atoll called Wake Island, lying in latitude 19° 17' 50" north and longitude 166° 31' east, was taken possession of in 1899 by the commander of the U.S.S. *Bennington*. But the greatest extension of jurisdiction over detached islands or groups of islands has taken place under the Guano Islands Act of August 18, 1856. By this act, where an American citizen discovers a deposit of guano on an island, rock, or key not within the jurisdiction of any other government, and takes peaceable possession and gives a certain bond, the President may, at his discretion, treat the territory as "appertaining to the United States." Under this statute more than eighty islands lying in various parts of the Atlantic and the Pacific have been brought within American jurisdiction.

What the Founders of the Union Thought concerning Territorial Problems.—"Is there anything whereof it may be said, See, this is new? It hath been al-ready of old time, which was before us." So said the preacher; and his generalization is nowhere more distinctly exemplified than in the discussions of the last twelve months over the colonial policy of the United States, in which both expansion-ists and anti-expansionists seem to look upon our territorial problems as unex-

UNITED STATES TERRITORIAL EXPANSION

amplified. In the previous articles of this series an attempt has been made to show how numerous have been the historical precedents for things that seem new in our present foreign policy; and in the question of expansion it is possible to draw a close parallel from the earliest experience of the American republic. Whatever the merits of the present controversy, the question whether it was the intention of the framers of our national government to increase the territory of the Union is one of fact; and the records of that time seem clearly to show that in the first thirty years of the United States of America—from 1775 to 1805—the question of territorial extension was repeatedly presented to the people of the United States and three times led to annexations; that we had territorial disputes with all our next-door neighbors and made advances into unexplored and hitherto unoccupied country. Furthermore, within those thirty years the founders of the republic thought they had settled nearly all our present territorial problems: they decided upon the status of conquered territory, the status of ceded territory, the relations of the government to the aborigines, the suppression of disorders in newly occupied territory, the administration of distant colonies, and the constitutional authority upon which the process of colonization and of colonial government was based.

In this period of three decades it is easy to distinguish four successive territorial episodes. The first was the conquest of the Northwest territory in 1778, and the consequent acknowledgment of the Mississippi as the western boundary by the treaties of 1782 and 1783; the second was the discussion over territorial powers during the Confederation, and in the federal and State conventions of 1787 and 1788; the third was the question of the navigation of the Mississippi, from 1783 to 1785; the fourth was the annexation of Louisiana—a great drama played in the three years from 1800 to 1803.

That our forefathers had some notions of territorial conquest may be seen in the important conquests made during the Revolutionary War in the region between the Ohio River, the Great Lakes, and the Mississippi. Thither La Salle's men

started, in December, 1681, "to go towards the Divine River, called by the Indians Checagou." Here in 1778 George Rogers Clarke entered upon what was far the most adventurous and daring campaign in the Revolution. With 200 men he plunged into a territory of 250,000 square miles, took the post of Kaskaskia, and in February, 1779, raised a force of French residents, appeared before the fortifications of Vincennes, and when the British commander, Hamilton, attempted to make terms, firmly replied: "I am, sir, well acquainted with your strength and force, and am able to take your fort; therefore I will give no other terms but to submit yourself and garrison to my discretion and mercy." Surely the bold American adventurer must have had in mind the gallant corporal in the opera who bids off the castle at auction and, when asked how he expects to find the money, answers, "I will save it out of my pay."

It is true that Clarke's expedition was commissioned and sent out by Virginia, and not by the federal government, and that hence the Virginians claimed exclusive title to the vast regions which were thus annexed. But in the minds of the people of other States the capture was simply a part of the general military operations of the Revolution, and they claimed with force, and finally with success, that Virginia must yield the territory to the general government, to be administered for the general good.

The hot discussions in and out of Congress on this subject, and the pamphlet literature of the time, all show a conception of the ability of the Americans not only to take territory by the sword, but to hold and govern it under a colonial status. The easy capture of the Northwest simply shows the fluidity of the territorial conditions of that time. Ever since the first brush between England and France, at Mount Desert in 1613, there had been a succession of American wars of conquest. In the successive treaties during the eighteenth century England gained from France one piece of territory after another, till, in 1763, France was totally excluded from the continent. It is not strange that to the Americans of that time transfer of ter-

UNITED STATES TERRITORIAL EXPANSION

ritory seemed a natural incident of warfare, and colonization seemed a part of the advance of civilization, though in 1778 it was as clear as it is now that annexation meant a great change in the balance of national forces and in the future growth of the country. The West was already looming up as a political power, and there were not wanting sages who shook their heads at the new and terrible problems which that vigorous region must bring upon the country.

At the end of the Revolution the United States had a most excellent opportunity to remain within the former limits of the thirteen colonies, for in the peace negotiations of 1782 and 1783 it was the distinct purpose of France and Spain, and at times of England, to make the water-shed of the Appalachian chain practically the western boundary. When John Adams joined the other negotiators in Paris he quickly discerned the intention to limit the territories of the United States, and he wrote: "Mr. Jay likes Frenchmen as little as Mr. Lee and Mr. Izard did. He says they are not a moral people; they know not what it is. He don't like any Frenchman. The Marquis de Lafayette is clever, but he is a Frenchman. Our allies don't play fair, he told me. They were endeavoring to deprive us of the fishery, the Western lands, and the navigation of the Mississippi. They would even bargain with the English to deprive us of them. They want to play the Western lands, the Mississippi, and the whole Gulf of Mexico into the hands of Spain." The British ambassadors at first also informed the American negotiators that they did not approve giving the Mississippi as a western boundary, for it was too extended, too vast a country.

Three different areas, adjacent to the original English colonies, were to be disposed of in the negotiations. First, some of the Americans doubted whether "we could ever have a real peace, with Canada or Nova Scotia in the hands of the English." The second region was the Northwest territory, in which the Americans had the right of occupation by conquest in a considerable part of the posts. The third area was the territory south of the Ohio River, most of which had not been

under the jurisdiction of any English colony prior to the Revolution.

The three arch-expansionists of that period—Franklin, Jay, and Adams—without much difficulty secured English consent to making the Mississippi the western boundary, as required by the instruction of Congress of 1779; but Vergennes, the French Prime Minister, insisted that "the boundaries of the United States south of the Ohio were confined to the mountains following that watershed." Although in 1781 Congress had so far retracted as to instruct the envoys "ultimately to govern themselves" by the advice of the minister of France on that subject, the three men fearlessly and successfully broke their instructions, accepted the amity of England, and secured a clause in the treaty by which the coveted boundary was obtained for the American people of that time and their posterity. By this magnificent piece of diplomacy the United States secured an unquestioned seat upon the Mississippi River, and thus prepared the way for an ultimate extension across the continent.

There were several tender spots in the boundary-line, but the only one of immediate importance came from the close neighborhood of the Spanish in the narrow strip along the Gulf known as West Florida, and in the inability of the Americans to secure from the Spanish the right to navigate the Mississippi to its mouth. But under the terms of the treaty, along the whole boundary-line from Lake Itasca southward, and eastward to the Atlantic Ocean, our only neighbor was weak and failing Spain, and the only obstacle to the occupation of the new empire was the existence of powerful savage tribes.

Having thus inaugurated the policy of territorial expansion, our forefathers next set themselves to the great task of furnishing a colonial government, and during the ten years from 1780 to 1790 this was one of the chief concerns of Congress. For a time the little federal government found itself in a contest with several of the larger and more powerful States in the Union; but by a diplomacy scarcely inferior to that of our envoys in Paris, and through a general spirit of patriotism, the claims of all these States were

UNITED STATES TERRITORIAL EXPANSION

gradually ceded between 1791 and 1802. And thus the United States came into undisputed government over the whole region between the Appalachians and the Mississippi River, except in the district, later the State, of Kentucky. It is one of the platitudes of American history that, after Congress had completed the primal national task of securing independence by arms and registering it in treaties, the possession of this great territorial domain was the chief steady-ing and unifying influence in the later years of the weak Confederation.

The first evidence that Congress had risen to its task was the vote of October 1, 1780, passed before the nation had acquired claim to a single rood of ground, and providing distinctly for the three elementary principles of early American colonialism: 1. That the lands "shall be disposed of for the common benefit of the United States," whereby the nation was pledged against a system of permanent national ownership or leaseholds. 2. That the said lands "shall be granted or settled at such times and under such regulations as shall thereafter be agreed upon by the United States in Congress assembled," thus asserting the right to govern territory. 3. That this territory "shall be settled and formed into distinct republican States, which shall become members of the federal Union."

Swift upon the assurance of Congress that it would administer the territory came a detailed scheme of colonial government. In 1784 Thomas Jefferson reported an ordinance which, with a few exceptions, was adopted by Congress; it set forth the future boundaries of new States, and authorized the settlers to establish temporary governments, with a view to later admission to the Union, and also permitted them to establish their own local governments. Fortunately for the school-children of a later generation, the polysyllabic State names which Jefferson suggested were not adopted.

Although there had for fifteen years been some settlements on the upper waters of the Kentucky and Tennessee, none of those communities took advantage of the privileges of the ordinance, and it was not until 1787 that, by the great territorial enactment, the Northwest Ordi-

nance, a beginning of an organized colonial system was made. By that ordinance the power of Congress to establish for the territory such governments as seemed to be suitable was more distinctly stated. For it set up for the Northwest Territory a double system: a preliminary territorial government, by an appointive governor and appointive judges, to be followed later by an elective representative assembly. Thus, before the adoption of the federal Constitution a system of colonial administration had been actually inaugurated; and it was expected that the same general principle would be extended to the other inchoate States.

So thorough-going and complete was the process, both of annexation and of care for new territories, that in the federal and State conventions of 1787 and 1788 there is almost no reference either to annexation or to territorial government. The clause giving Congress "power to dispose of and make all needful Rules and Regulations respecting the Territory or other property belonging to the United States" passed without debate, because it simply registered the practice of the old Confederation. Nobody suggested further annexation, not because they were thought impossible, but because the only danger which men feared was loss of territory. As Patrick Henry said: "If the King of England wished to dismember the empire, would he dare to attempt it without the advice of Parliament? Would it be so in your American government? No." What Henry and what wiser men feared was that "the Senate, by means of a treaty, might alienate territory, etc., without legislative sanction." It is perhaps not remarkable that no distinct clause authorizing treaties of cession was introduced, for the Americans had within five years by such a treaty come into legal possession of a vast area, of which a large part was not yet organized.

The framers of the Constitution perfectly understood that the power which they gave Congress to make war included the power to conquer territory, and that the power to make treaties included authority to annex by peaceful concession; for in 1788 they were seeking a new territorial treaty with Spain, and some of them were threatening war

UNITED STATES TERRITORIAL EXPANSION

if the cession were refused. In the negotiations of 1783 no treaty of any kind could be obtained from Spain, a power which looked with justified uneasiness upon the success of rebellious American colonies; but Spain held a region of such value to the Western communities that, in 1784, Washington wrote: "The Western States (I speak now from my own observation) stand, as it were, upon a pivot; the touch of a feather would turn them any way. They have looked down the Mississippi until Spain—very politically, I think, for themselves—threw difficulties in their way." The truth is that the few thousand Western people were in a ferment and openly threatened secession unless the Union would secure for them the unquestioned right to send their goods down the Mississippi to the Gulf without paying duty to the Spaniards. At the same time the Spaniards, with some show of justice, contested the southern boundary which had been granted without their consent by England, and insisted that the United States extended no farther south than the mouth of the Yazoo, instead of the thirty-first parallel.

To settle these difficulties there appeared at the seat of government in 1785 Don Diego Gardoqui, bearing a commission from "Don Carlos, by the grace of God King of Castile, of Leon, of Aragon, of the two Sicilies, of Jerusalem, of Navarre, of Granada, of Toledo, of Valencia, of Galicia, of Majorca, of Seville, of Sardinia, of Cordova, of Corsica, of Murcia, of Jean, of the Algarves, of Algeciras, of Gibraltar, of the Canary Islands, of the East and West India islands, and Terra Firma, of the Ocean Sea; Archduke of Austria; Duke of Burgundy, of Brabant, and of Milan; Count of Apsburg, of Flanders, of Tirol, and of Barcelona; Lord of Biscay and of Molina, etc."

Gardoqui offered a commercial treaty exceedingly acceptable to the merchants of the seaboard, provided the Americans would renounce all claims to the coveted Mississippi navigation; and Congress yielded the point. At once there arose a storm of protest from the West, and from Virginia as the mother of these settlements. Some canny statesmen coincided with Henry Lee in his suggestion

that "in agreeing to the occlusion of the navigation of the Mississippi we give in fact nothing; that the moment our Western country becomes populous and capable they will seize by force what may have been yielded by treaty." In Kentucky people thought force might more profitably be used at the beginning, and committees of correspondence were raised; in the Northwest Territory the governor seized the property of a Spaniard. James Wilkinson, later ranking officer of the American army, was in treaty with the Spaniards, and accepted an annual pension from them to push the secession of Kentucky. Congress in some alarm proposed forthwith to make Kentucky a State; and finally, by common consent, the whole question went over till the new Constitution could be put in force.

Even after the new federal government had begun, the Mississippi question remained serious, and in 1792 Alexander Hamilton said that "while he was for delaying the event of war, he did not doubt it would take place between us for the object in question." Fortunately the Spanish government found it expedient to settle such disputes, and in 1795 the long controversy over the boundary was amicably adjusted by the acceptance of the line assented to by the United States; and the navigation of the Mississippi was allowed by the so-called "right of deposit"—that is, the privilege of landing goods in Spanish territory and then reshipping them without responsibility to the Spanish custom-house.

This settlement proved only a palliative, but it showed the determination of the Americans to stand sturdily by their boundary claims and to secure territorial advantages; and it did not escape the attention of wise observers that it might some time become necessary to fight for the full possession of the mouth of the Mississippi.

During the first decade under the federal Constitution the nation did not yet know its own strength or venture to predict its own future. The geographer Winterbotham, in 1796, ventured to say: "Federal Americans, collected together from various countries, of various habits, formed under different governments, have yet to form their national character; or,

UNITED STATES TERRITORIAL EXPANSION

we may rather say, it is in a forming state. They have not yet existed as a nation long enough for us to form an idea of what will be, in its maturity, its prominent features. Judging, however, from its present promising infancy, we are encouraged to hope that at some future period not far distant it will, in every point of view, be respectable."

The geographical and political conditions of the time speedily revived the spirit of political extension. Americans could put up with the exclusion from the lower Mississippi and the Gulf so long as that territory was in the hands of weak and declining Spain. European wars and treaties now began, however, to have far-reaching effects, extending to the New World, for in 1795 and 1796 the French government began to urge upon Spain the transfer of the former French province of Louisiana and secured the cession of the Spanish end of the island of San Domingo. No progress was made until 1800, when Napoleon's representative courteously suggested that "the court of Spain will do then at once a wise and a great act if it calls France to the defence of its colonies by adding Louisiana to them, and by replacing in their hands this outpost of its richest possession in the New World." Yet some consideration had to be offered even by the world-conquering power, and France proposed to make the son-in-law and daughter of the King of Spain King and Queen of the new realm of Etruria. Upon this basis was concluded the treaty of San Ildefonso, of October, 1800, by which Louisiana was ceded to France. Poor Spain, having thus begun the process of colonial decay by parting with Louisiana for a bauble, was deprived even of the bauble; for the new King and Queen of Etruria found themselves to be but puppet sovereigns, everywhere limited and harassed by French officers, who practically relieved them of the cares of state.

Month after month passed without the expected order for the transfer of Louisiana, and in August, 1801, Napoleon, in one of his masterful letters, said: "It is at the moment when the First Consul gives such strong proofs of his consideration for the King of Spain, and places a prince of his house upon a throne which

is fruit of the victories of French arms, that a tone is taken toward the French republic such as might be taken with impunity toward the republic of San Marino."

In the middle of 1802 rumors of the transfer spread to America, and in October Spain withdrew the right of deposit without assigning the new place promised by the treaty of 1775. It was plain that the colony would speedily be transferred, and that the French would receive it with the right of navigation suspended. From a quiet, peaceful, home-loving nation the American people were instantly transferred into an expansionist power. No man was less inclined to use force for private or political ends than Thomas Jefferson—philosopher, scientist, skilled farmer, buyer of books, writer of letters, expounder of human freedom, and President of the United States; yet upon him fell the task of leading the nation into an unexpected course of territorial extension. In his famous letters of April and October, 1802, to his friend Dupont and to our minister Livingston, he made evident at the same time his desire for peace, his sense of danger from the French-occupation, and his willingness to ally with England in order to prevent it. "We see," he said, "all the disadvantageous consequences of taking a side, and shall be forced into it only by a more disagreeable alternative; in which event we must countervail the disadvantages by measures which will give us splendor and power, but not so much happiness as our present system. . . . There is on the globe one single spot the possessor of which is our natural and habitual enemy. It is New Orleans, through which the produce of three-eighths of our territory must pass to market, and from its fertility it will ere long yield more than half of our whole produce, and contain more than half of our inhabitants. France, placing herself in that door, assumes to us the attitude of defiance. Spain might have retained* it quietly for years. . . . The day that France takes possession of New Orleans fixes the sentence which is to retain her forever within her low-water mark. It seals the union of two nations who in conjunction can maintain exclusive possession of the

UNITED STATES TERRITORIAL EXPANSION

ocean. From that moment we must marry ourselves to the British fleet and nation. We must turn all our attention to a maritime force, for which our resources place us on very high ground; and having formed and connected together a power which may render reinforcement of her settlements here impossible to France, make the first cannon which shall be fired in Europe the signal for the tearing up of any settlement she may have made, and for holding the two continents of America in sequestration for the common purposes of the united British and American nations."

That these principles were the principles of the nation was shown by the readiness with which Congress supported the thorough-going measures proposed by the President. The Federalists, then in opposition, outdid the President by an immediate and vehement demand for war. Senator Ross moved that fifty thousand men be raised, and that New Orleans be seized out of hand—a step which must have led to immediate war with France; and President Jefferson said with some bitterness that the Federalists "were trying to attach the Western country to them as their best friends and thus to regain power."

Jefferson's marvellous control over Congress enabled him to check the Federalists, and at the same time to take three decided steps—in January, 1803, Monroe was sent as a special envoy to Paris; in February \$2,000,000 were appropriated for the purchase of territory; and in March the enlistment of 80,000 volunteers was authorized. Even at this time, however, not the faintest thought of the purchase of the whole territory of Louisiana appears to have crossed Jefferson's mind. "The country which we wish to purchase," said he, "is a barren sand, six hundred miles from east to west and from thirty to fifty miles from north to south," and in his instructions to Monroe and Livingston they were directed to obtain New Orleans and West and East Florida, or as much of them as could be had—that is, to extend the western boundary down the Mississippi to its mouth, and the southern boundary from the thirty-first parallel to the Gulf. Failing in this negotiation, the envoys were in-

structed to make a military combination with England.

This was not the first nor the last time that the United States sought a small territory and got a large one. Just as George Rogers Clarke's capture of two frontier posts gave rise to the occupation of a vast territory between the Mississippi and the mountains, and just as the expedition to Cuba led to the annexation of the Philippine Islands, so Monroe and Livingston sought for twenty thousand miles of barren sand and brought home six hundred thousand miles of empire.

People speak of the "Louisiana negotiations" as though there had been two sides and a balancing of propositions. In reality the province was thrown to the United States, as the Caliph Harun-al-Rashid might have given a palace to a poor merchant who had admired the portico. While Livingston was toiling for West Florida, one day Marbois, the French negotiator, threw out, "as a suggestion of his own," that perhaps the United States would offer a price for all Louisiana. Livingston hesitated and suggested \$6,000,000, pleading lack of powers. The next day he was joined by Monroe, and together they agreed that some arrangement must be made. But they continued to haggle over the price, little knowing the powerful influences brought to bear on Napoleon. Lucien and Joseph Bonaparte went to see their brother even in his bath, and Joseph ventured to declare, "I will be the first one to place myself, if it is necessary, at the head of the opposition which cannot fail to be made to you." "To these words," reports Lucien, "the Consul, lifting himself half-way out of the bath-tub, in which he had sunk down again, said to him, in a tone which I will call energetically serious and solemn: 'You will have no need to stand forth as the orator of the opposition, for I repeat that this discussion will not take place, for the reason that the plan which is not sufficient even to obtain your approbation, conceived by me, negotiated by me, will be ratified and executed by me all alone—do you understand?—by me, who snap my fingers at your opposition.'"

No longer was resistance possible against this terrible man. The Ameri-

UNITED STATES TERRITORIAL EXPANSION

can offer of \$15,000,000 for the territory was accepted, and on April 30, 1803, the treaty was duly made. But it was not possible for Jefferson to put down opposition in any such summary fashion; he had to deal with a Senate which must confirm the treaty, and a Congress by which the necessary money must be voted, and in the discussion of the question in the Senate and House the various opinions of the American people were distinctly brought out. In the special session of Congress called to consider the Louisiana treaty in October, 1803, the territorial powers of the United States and the relations of the new country were for the first time clearly analyzed.

A somewhat indolent gentleman, who found it troublesome to perform his devotions every night, simply wrote, a prayer, which he pinned to the head of his bed, and remarked from evening to evening, "Lord, those are my sentiments." It would seem as though the same labor-saving device might well be applied to the discussions of territorial policies and powers, for in the debates of 1898 and 1899 were stated with more proximity and less cogency the same passionate objections and the same rejoinders which busied the minds of the Senate and the House in October, 1803. A summary of the arguments pro and con, with some brief extracts, may therefore serve as an unconscious commentary upon the questions of Cuba, Porto Rico, and the Philippines.

First of all came the question whether, in strict international law, France had anything to transfer. The Spanish government lodged a protest against the cession of the province, on the ground that it had not been paid for, that it had not been transferred, and that France had promised never to cede it to any other power than Spain. This question Jefferson quietly but effectively disposed of by saying that we had our title from Napoleon and "did not doubt his guarantees."

The constitutionality of the annexation of territory in some form was admitted even by Pickering, the great anti-expansionist of his time, who declared that he "had never doubted the right of the United States to acquire new territory,

either by purchase or by conquest, and to govern the territory so acquired as a dependent province." Pickering, however, laid down two limitations upon the admission of territory. The first was that "a treaty to be thus obligatory must not contravene the Constitution, nor contain any stipulations which transcend the powers therein given to the President and Senate"; therefore he objected to that article of the treaty which provided that "the inhabitants of the ceded territory shall be incorporated in the Union of the United States." His second objection was not only far-fetched, but was later refuted practically in the annexations of Louisiana and Texas. "He believed the assent of each individual State to be necessary for the admission of a foreign country as an associate in the Union, in like manner as in a commercial house the consent of each member would be necessary to admit a new partner into the company." Another constitutional stumbling-block was the article of the treaty which for twelve years admitted ships of France and Spain into the ceded territory without special tonnage duties, a privilege which the Federal Tracy said "is giving a commercial preference to those ports over the other ports of the United States."

The argument that the Constitution was not framed for extension of territory was thus stated by Mr. Griswold: "It was not consistent with the spirit of the Constitution that territory other than that attached to the United States at the time of the adoption of the Constitution should be admitted, because at that time the persons who formed the Constitution of the United States had a particular respect to the then subsisting territory." Griswold also clearly enounced the doctrine that the lower House must participate in all admission of territory, and that Congress must stand against the President. "If the right of extending our territory be given by the Constitution, its exercise is vested in the legislative branches of the government. . . . If this were the case, it was the duty of the House to resist the usurped power exercised by the executive."

So evident were the practical advantages of annexing Louisiana that much of

UNITED STATES TERRITORIAL EXPANSION

the anti-annexation argument was directed against the future creation of a new State, from which would come senators and representatives. Even Griswold admitted that "a new territory and new subjects may undoubtedly be obtained by conquest and by purchase; but neither the conquest nor the purchase can incorporate them into the Union. They must remain in the condition of colonies and be governed accordingly." John Randolph, who effectively, though somewhat rudely, recalled the recent Federalist desire to fight for the navigation of the Mississippi, asked whether the "unlucky ingenuity of the gentleman from Connecticut [Griswold] would undertake to prove that a part was less than the whole; and that although the attaining of a qualified and precarious right to a given object furnished good cause for war, yet to acquire an unqualified and secure right to the same object would not justify hostility."

The Senate and the House of 1803, the people of that time, the experience of a century, and common sense unite in the conclusion that the United States may constitutionally acquire territory by either conquest, or purchase, or voluntary cession, and that out of that territory may be created new federal States. But this does not touch that question of expediency, upon which the objectors of 1803 expended so much ingenuity. As Breckinridge expressed it: "Unfortunately for the gentlemen, no two of them can agree on the same set of objections; and what is still more unfortunate, I believe that no two of them concur in any one objection. In one thing only they seem to agree, and that is to vote against the bill. An honorable gentleman from Delaware [Mr. White] considers the price to be enormous. An honorable gentleman from Connecticut who has just sat down [Mr. Tracy] says he has no objection whatever to the price; it is, he supposes, not too much. An honorable gentleman from Massachusetts [Mr. Pickering] says that France acquired no title from Spain, and therefore our title is bad. The same gentleman from Connecticut [Mr. Tracy] says he has no objection to the title of France; he thinks it is a good one. The gentleman from Massachusetts [Mr. Pickering] contends that the United States

cannot, under the Constitution, acquire foreign territory. The gentleman from Connecticut is of a different opinion and has no doubt but that the United States can acquire and hold foreign territory, but that Congress alone has the power of incorporating that territory into the Union. Of what weight, therefore, ought all their lesser objections be entitled to, when they are at war among themselves on the greater one?"

The favorite objection was the distance of the new territory. As White expressed it: "But as to Louisiana, this new, immense, unbounded world, if it should ever be incorporated into this Union, which I have no idea can be done but by altering the Constitution, I believe it will be the greatest curse that could at present befall us. . . . You had as well pretend to inhibit the fish from swimming in the sea as to prevent the population of that country after its sovereignty shall become ours. . . . Thus our citizens will be removed to the immense distance of two or three thousand miles from the capital of the Union, where they will scarcely ever feel the rays of the general government. . . . We have already territory enough, and when I contemplate the evils that may arise to these States from this intended incorporation of Louisiana into the Union I would rather see it given to France, to Spain, or to any other nation of the earth, upon the mere condition that no citizen of the United States should ever settle within its limits, than to see the territory sold for an hundred millions of dollars and we retain the sovereignty."

To these difficulties was added the argument that the territory and its inhabitants were distinctly undesirable. As Tracy put it: "The principles of these people are probably as hostile to our government, in its true construction, as they can be, and the relative strength which the admission gives to a Southern and Western interest is contradictory to the principles of our original Union as any can be, however strongly stated." Another member, Griffin, took up the question of the health of the settlers and troops. He feared "the influence of climate upon our citizens who should migrate thither." He did fear (though this land was represented as flowing with milk

UNITED STATES TERRITORIAL EXPANSION

and honey) that "this Eden of the New World would prove a cemetery for the bodies of our citizens."

Another, Griswold, plainly stated the political principle that charity begins at home. "The government of the United States was not formed for the purpose of distributing its principles and advantages to foreign nations. It was formed with the sole view of securing those blessings to ourselves and our posterity." The dangers of wars with the natives was not forgotten. As White put it, "It may be productive of innumerable evils, and especially of one that I fear even to look upon."

Another objection was the cost of the territory. White declared "that under existing circumstances, even supposing that this extent of territory was a desirable acquisition, fifteen millions of dollars was a most enormous sum to give." Another argument, stated by Mr. Wells, was the distrust of the President's influence: "The question which presents itself to my mind is, who shall judge whether the French government does or does not faithfully comply with the previous condition? The bill on your table gives to the President this power. I am for our retaining and exercising it ourselves. I may be asked, why not delegate this power to the President? Sir, I answer by inquiring, why should we delegate it? To us it properly belongs."

To sum up the objections to the treaty: France had no right to cede it; the United States had no right to receive it, under the conditions of the treaty; it was not worth having on any terms; it was vast; it would disturb the balance of the Union; it would draw valued inhabitants from other parts of the United States; it would poison the settlers; the treaty was an extra-constitutional proceeding; the President and Senate did not represent the opinion of the country; and patriotic men ought to oppose "such a pernicious measure as the admission of Louisiana, of a world, and such a world, into our Union."

In those distant times, as at the present day, some men thought the annexation of territory *prima facie* desirable, and were willing to face the difficulties and dangers of the process. The most

cogent of these was John Quincy Adams, then Senator from Massachusetts. His argument is set forth in two striking passages: "Allowing even that this is a case for which the Constitution has not provided, it does not in my mind follow that the treaty is a nullity, or that its obligations, either on us or on France, must necessarily be cancelled. . . . Notwithstanding the objections and apprehensions of many individuals, of many wise, able, and excellent men, in various parts of the Union, yet such is the public favor attending the transaction which commenced by the negotiation of this treaty, and which I hope will terminate in our full, undisturbed, and undisputed possession of the ceded territory, that I firmly believe that if an amendment to the Constitution, amply sufficient for the accomplishment of everything for which we have contracted, shall be proposed, as I think it ought, it will be adopted by the legislature of every State in the Union."

The danger of imperialism to free institutions was considered and confronted by Elliott: "Evils and dangers may be apprehended from this source and great evils and dangers may possibly result. . . . If we cannot find in the peculiar principles of our form of government, and in the virtue and intelligence of our citizens, a sufficient security against the dangers from a widely extended territory, in vain shall we seek it elsewhere. There is no magical quality in a degree of latitude or longitude, a river or a mountain."

The inherent right of the nation to increase territory was defended by Nicholson: "Had I been asked anywhere but in this House whether a sovereign nation had a right to acquire new territory, I should have thought the question an absurd one. It appears to me too plain and undeniable to admit of demonstration. Is it necessary to resort to ancient authorities to establish a position which is proved by the conduct pursued by all nations from the earliest periods of the world and which arises from the very nature of society?"

The ability of the country to bear the strain of colonies was defended by John Randolph: "But it is dreaded that so

UNITED STATES TERRITORIAL EXPANSION

widely extended a country cannot subsist under a republican government. If this dogma be indisputable, I fear we have already far exceeded the limits which visionary speculatists have supposed capable of free government. This argument, so far as it goes, would prove that instead of acquiring we ought to divest ourselves of territory."

The authority of the President to establish a temporary government was clearly set forth by Jackson: "Gentlemen, indeed, had doubted, on a former occasion, the propriety of giving the President the power of taking possession and organizing a temporary government, which every inferior officer, in case of conquest or cession, from the general to the subaltern, if commanding, has a right to do; but I little expected these doubts after we had gone so far. For my part, sir, I have none of those fears. I believe the President will be as cautious as ourselves." The same speaker ventures a reference to posterity: "In a century, sir, we shall be well populated and prepared to extend our settlements, and that world of itself will present itself to our approaches, and instead of the description given of it by the honorable gentleman, of making it a howling wilderness, where no civilized foot shall ever tread, if we could return at the proper period we should find it a seat of science and civilization."

While members of Congress, as well as people outside, were discussing the ques-

tion of Louisiana, Jefferson had already despatched Lewis and Clarke to explore the upper Missouri and find a practicable road across to the Pacific; but though bold to enlarge his country, he still had constitutional qualms, which were not removed by the Senate vote of 24 to 7 ratifying the treaty, nor by the House vote of 90 to 25 granting the necessary appropriation. Jefferson drew up a constitutional amendment intended to be an indemnity for him, and to define the principles of annexation for later times; but his own friends laughed at the idea, and from that day to this the territory has remained a part of the United States, with no further constitutional controversies.

If this study were carried farther forward, the same evident, hearty, and unappeasable Anglo-Saxon land-hunger would be found appearing in the war of 1812, in the boundary controversies with Great Britain, in the annexations of Texas and California. Whether that was a right and wholesome hunger must be determined from the last fifty years of national history. But wise or unwise, far-seeing or haphazard, consecutive or accidental, good or evil, the policy of our forefathers was a policy of territorial extension, and they met and supposed that they had surmounted most of the problems which have now returned to vex American public men and to give concern to those who love their country.

UNITED STATES TREASURY AND THE FINANCIAL SITUATION

I

The following article, which originally appeared in *The North American Review*, was written by accepted authorities in the financial world. They are Lyman J. Gage, formerly Secretary of the Treasury; William B. Ridgely, Comptroller of the Currency; Charles A. Conant and Charles B. Macdonald, bankers. It is divided into four parts. 1st, the relation of the United States Treasury to general finance; 2d, our currency and banking systems; 3d, the lessons of the panic of 1907; and 4th, a comparison of the panic of 1907 with those of 1837, 1857, 1873, and 1893.

The Relation of the United States Treasury to General Finance.—The United States Treasury in its relation to the banking and financial interests of the country has occupied, since the creation of the national banking system, to go back no farther, an illogical, not to say an unjustifiable, position. By the National Banking Act, with its several amendments, the government became sponsor for banking institutions now numbering more than 6,500. The rights, duties, qualifications, and responsibilities attached by law to all these institutions

UNITED STATES TREASURY AND THE FINANCIAL SITUATION

were fixed by the government itself. Having brought these agencies into being, it virtually declared to the citizens of the land: "These are worthy agencies, and they deserve your confidence. For the faithful performance of the duties imposed upon them, and in the interest of your safety, we, the government, will maintain over them a watchful and detailed supervision, disciplining those unfaithful to duty, while we will peremptorily suspend the power of any who shall prove unfit." Clothed with those high warrants and sanctions, the national banks as a whole have made successful appeal to the business world; and these institutions now taken together are under money obligations to the people for a sum in excess of four thousand millions of dollars.

What has been the practical attitude of the government, as expressed through its Treasury and fiscal department, to the banking agencies it has thus endowed with life? It can be set forth in a single paragraph. Never has the government itself entrusted its financial interests to the safe-keeping of the agencies it has held out to the people as worthy of their respect and confidence. It has, indeed, on several and divers occasions, taken moneys from the Treasury hoard, and, under peculiarly exacting conditions, it has, for various periods of time, deposited a portion of these hoards with banking institutions; but it has in no way conformed to the general method by which the banking agency is utilized by the business public. It has, in fact, persistently refused to receive from that portion of the public from which it derives its enormous revenues those instruments of credit, known as "checks" and "drafts," which constitute the real currency of commerce and trade. Separate, distinct, and aloof from the ordinary financial and industrial life to which, through its revenues and disbursements, it stands closely related, it is persistent in exacting cash in hand from its revenue contributors: while, on the other hand, it has distributed its payments in actual funds through its own special appointees.

In all these particulars it has been as if the banking agency did not exist, or, if existing, as if it were unworthy of gov-

ernment use. The excess of its revenues, when excess there has been, was withdrawn from that public service to which through the banks it might have been applied.

This, I say, was illogical. It might, indeed, have lain in the mouth of the great corporations—such as railroads, the Standard Oil Company, and other enormous handlers of money values—to say to the government: "Your ingenious so-called banking system does not commend itself to our respect and confidence. We believe neither in the people with whom we deal nor in the banks you have created. Our revenues, however derived, must come to us in actual money. The device of checks and drafts, so convenient and economical to the people in their other affairs, does not appeal to us. Having the power in our relation to do so, we dictate the conditions. Our money, when received, we will lock up; and in the natural financial intimacies of life we will stand separate, apart, and independent. We justify this action on the ground that your banking system is unsafe."

Now, if it were excusable on this ground for these great corporations to take this arbitrary position—which nobody will affirm—it were inexcusable for the government to do so, since the government itself determined and decreed all the qualifications for safety and efficiency which its own creatures should possess.

Was this course of action on the part of the government necessary for just prudence as to the safety of its funds or proper economy in administration of its affairs? In answer to the first half of this question, I affirm it to be the fact, demonstrated by careful and thorough examination, that had the government employed the national banks in centres known as the "reserve cities," depositing with them its revenues, with some just proportion to or regard for the relative capital of those various institutions, with no security from them whatever other than a first lien upon their assets, respectively, there would never have been a dollar of loss to the government. If, on the other hand, the government had required, in consideration for these moneys so deposited, an interest return by the

UNITED STATES TREASURY AND THE FINANCIAL SITUATION

banks of, say, two per cent. per annum, the government would have realized from this source, up to the present time, a total revenue of something more than \$70,000,000.

As to economy of administration of the Treasury funds, there would also have been an enormous saving, since the elaborate machinery of the Treasury and Sub-Treasuries need not have been employed. Nevertheless, the creator has steadily refused to employ its own agencies, while the rest of the business world, obedient to the law of economic advantage, has employed in its multifarious affairs the useful machine of banking-credit which the government has thus rejected. To add piquancy to this contrast, it might be truthfully said that were the aforesaid large financial corporations to abandon their present methods and adopt instead the example of the government, and install, each for itself, an "independent treasury," a cry of indignant protest would resound through the length and breadth of the land—and rightly so, unless it be that our modern system of credit and credit machinery for the transfer of property and payment of accounts, etc., is a delusion and a snare.

If the credit system can be thus characterized, the government is, no doubt, justified in maintaining its own private purse independent of all things else. It is in that case equally true that every one controlling money values should adopt the same rules. In short, the National Banking Act should be repealed. We are not, however, ready to return to a method closely allied to primitive barter. Concede this, and then the government is wrong—economically and logically wrong—in its independent Treasury. The disturbing influence on general financial affairs of excessive money-hoarding by the government has been too often described to require any detailed notice here. If, then, a vote were to be taken among those who have capacity to judge of things in their true relationships, I do not doubt that the proposition to abolish the independent Treasury and substitute for it the use of banking agencies as they *now* exist would receive a preponderating vote. I may be wrong in this opinion. I myself would hesitate, however, to vote in the

affirmative on that proposition. I should much prefer that the motion be "laid upon the table" until our banking system can be so amended that it shall be free, or comparatively free, from the perturbations which periodically beset us, bringing in as a consequence a partial or complete suspension of the banking function upon which society depends for the regular ongoing of its business affairs.

I need hardly say that the amendments to which I refer must be in the line of unification or centralization of power. The banking units, whose weakness as they now exist has been so often demonstrated, must receive strength by association together or with some superior commanding agency able both to exercise control and furnish effective support. A central bank or a government bank of adequate capital properly organized for safety and efficiency is the sort of agency to which I refer. Great Britain, France, and Germany offer good models which we may profitably study.

I would maintain the independent Treasury until such time as our banking system is so re-enforced; because, in spite of the lack of logical reasons for its existence, it has been, and is now, in our imperfect condition, the only agency which can, or theoretically can, regulate and give to some extent a degree of steadiness to the erratic movement incidental to our financial and banking system as now operated.

By its intervention the Treasury, on many occasions in the past, has averted threatened financial disaster. Given an always plethoric Treasury, directed by an infallibly wise administrator (one who has never yet appeared), it could, by timely deposits of these hoarded moneys, and by timely withdrawals of the same, in part or in whole, give steadiness and regularity where otherwise there would be irregularity, dislocation, and panic. In these regards the independent Treasury, when endowed with the needful power in money, can, and in my opinion has, to a degree, served the purpose and discharged in a crude way the functions of a great government or central bank. This service, crude as it has been, often entirely lacking through want of power, often badly directed through lack of wisdom, is a de-

UNITED STATES TREASURY AND THE FINANCIAL SITUATION

velopment not anticipated nor foreseen in the laws establishing the independent Treasury. It illustrates an old truth often recognized that even out of evil good may incidentally come. Be the service to which I have referred worth little or much, it cannot safely be counted upon as a valuable factor in the future. The present overflowing Treasury, through changed conditions, may, at no distant date, be in a state of exhaustion. A perfect system of government finance would, indeed, bring in each day from its sources of revenue a sum exactly adequate to meet its daily expenditures. We ought not, then, to retain permanently the independent Treasury for the sake of its ambiguous and uncertain control as an intermediary in our financial life, with which it should by right interfere to the smallest degree possible.

My conclusion, then, is, first, that the independent Treasury should be abolished whenever and as soon as our present banking system, which has been demonstrated to be faulty, is corrected in the direction I have pointed out rather than described; secondly, that the perfecting of our banking and currency system—so that it may at all times perform its important function in a safe and effective manner both for the government and for all the people—is an end demanding the best thought and the most intelligent effort of financial students and political economists, and of all patriotic people who desire for their country what will best make for its economic welfare.

The end so much to be desired cannot, however, be achieved by any thoroughgoing revolutionary action. The proposition is too large, the complex problems too numerous, the involved financial relations of the government too firmly fixed. To illustrate this, we have the legal-tender notes of the United States, with their special reserve fund of \$150,000,000. We are met with the fact of a silver currency of some \$600,000,000 possessed of a commercial bullion value of something like half that sum. For the difference between these stand the credit and pledge of parity by the government. Who is to take the place of the Treasury in the practical work of maintaining equivalencies between these government obligations and gold? I point

also to the artificial status of United States bonds. Now impounded as security for national bank-notes, the question of an "elastic" bank currency is handicapped by the necessity of protecting vested interests, which would be imperilled by any course which would give an open, natural, and free market to government securities.

There is the guaranty of the government to bank-note issues, an illogical and, I believe, a harmful influence in the currency. There are established Sub-Treasuries with all their appointments and appointees. There are the great bureaus at Washington, known as the issue and redemption division, with the hundreds composing their personnel, all dear to the heart of the political administration. These reflections bring in the suggestion that "reform" must be by graduated steps, with possibly long intervals after each; it must be effected by modifications rather than by radical changes. The first object to be gained, as it appears to my thought, is the perfecting of the banking and currency system. This once placed upon scientific foundations, the next question will be in order—namely, how to bring the Treasury into more natural and more harmonious relations with our general financial interests through a broader utilization of the bank agency.

II.

The Nation's Currency and Banking System.—The dry details, indicating the condition of our banking and monetary system and suggesting the future of financial affairs, are not, ordinarily, of sufficient interest to the average reader to claim the time and attention necessary to a thorough understanding of them; but the subject has been so vividly brought to the fore by the recent stringency, by the efforts to relieve it, and by the various suggestions as to how a repetition of it might be averted, that a wide-spread and general interest in the question seems to have been created.

There is that in the situation itself, at the present moment, which demands the careful consideration of the thoughtful as to whether our system is all that it should be, and, if not, how it should be

UNITED STATES TREASURY AND THE FINANCIAL SITUATION

reconstructed to meet future emergencies without creating opportunity for other and even more serious contingencies. Without going far into the voluminous figures which substantiate conclusions, a few preliminary facts will aid to the proper study and easier understanding of the necessities confronting those who attempt to correct the imperfections, and will indicate the value of the safeguard required.

No grave and general upheaval of financial affairs comes without more or less warning to those whose business it is to watch the signs of the times. The conditions both at home and abroad, very early in the present year, indicated the probability of a contraction in business in general and a tightness in the money-market, but the extraordinary conditions which developed in October were not foreshadowed to any appreciable extent in the bank reports as a whole up to August 22d. There was a steady increase in the volume of loans and discounts—an increase due in part to the number of new banks chartered during the year, but mainly to increase in the business of the old associations. Individual deposits, representing fifty per cent. of the banks' liabilities, reached the maximum in the history of the system on May 20, 1907, when they amounted to \$4,322,841,141. The number of depositors in savings-banks reporting—exclusive of those having accounts in savings departments of the State banks of Illinois—increased, since 1900, from 5,898,091 to 7,982,893, and the average deposit increased from \$404.33 to \$437.86. For the current year, individual deposits in all reporting banks aggregate \$13,099,635,348—a gain of nearly six billion dollars, or 80 per cent. in the last seven years. The highest record of increase in individual deposits, in the year ending June 30, 1907, was made by banks in the Western States, where they increased nearly twenty per cent. during the single year.

In 1891 the outstanding circulation of national banks reached the lowest point in the life of the system since 1865—only about \$187,000,000, representing ten per cent. of the stock of money in the United States. There was very little variation from that percentage up to 1900, when the proportion increased to 13.23. On

June 30, 1907, national-bank notes represented 19.38 per cent. of the money in the United States.

Incident to the usual business of clearing, documents termed "clearing-house certificates," representing lawful money deposited for the purpose, are issued for the convenience of members of the association in settling balances. Under Section 5192 of the Revised Statutes, such certificates are deemed lawful money in the possession of any association belonging to the clearing-house issuing such certificates. Under exceptional circumstances, they have also issued clearing-house loan certificates, based on bills receivable and other securities approved by the loan committee.

The Director of the Mint, from the most recent and reliable data obtainable, estimates that, at the close of the calendar year of 1906, the stock of money in the world was \$11,280,100,000. Eighty-two per cent. of the gold was held by eight countries, as follows: The United States, \$1,593,300,000; Germany, \$1,030,300,000; Russia, \$939,400,000; France, \$926,400,000; England, \$486,700,000; Austria, \$306,400,000; Italy, \$215,500,000; Spain, \$90,900,000. Over 56 per cent. of the stock of silver was held by the same countries, the United States leading again with \$698,700,000.

In 1890 Mulhall estimated the world's banking power at \$15,985,000,000, of which the United States was credited with \$5,150,000,000. Since that year the banking power of the United States alone has increased to \$12,674,800,000—over 146 per cent.; that of all the other countries has increased only to \$16,199,200,000—the banking power of the United States being thus little less than one-half that of the entire world. These colossal proportions and comparisons but imperfectly indicate the enormous extent of the banking and monetary system with which we have to deal in making any radical change.

There has been no lack of warning indications of financial troubles. For the last ten or twelve years there has been an era of advancing prices and of great industrial, commercial, and speculative activity, in all countries of the world. Credits were increased till the limit was reached in the amount of reserve money

UNITED STATES TREASURY AND THE FINANCIAL SITUATION

on which they must be based. For two or three years it has been constantly more evident that there must be a slackening of the pace if we would avoid a general crisis in commercial affairs. As is always the case, when there is a demand for liquidation, it first manifests itself in the stock-market. For months there has been a more or less steady decline in quotations. The difficulty in selling bonds became so great that many of the railways have had to raise money for their necessary expenditures through short-time notes instead of by the regular bond issues. Merchants and manufacturers of the highest credit have found it harder and harder to renew loans, and the rates have risen steadily for months.

It was under such conditions that we approached the autumn crop-moving period, when there are always withdrawals of balances from the reserve cities. For a time there was reason to hope that there might be no more than a gradual liquidation of credits which would not develop into a bank or commercial crisis. But in October the collapse of a highly speculative corner in stocks dealt in on the "curb" in New York—not even listed on any regular exchange—brought suspicion upon an old and well-established national bank. Examination showed this bank to be entirely solvent; but public interest had been aroused to such an extent that runs developed in New York City on several other banks and trust companies. Some of them were not prepared for co-operation and protection against the sudden demands, and a number of failures followed.

In this emergency the clearing-house banks of New York issued clearing-house certificates for use in the payment of balances and decided to suspend the shipment of currency to out-of-town banks. This example was followed by the central reserve banks and most of the other reserve cities, of necessity precipitating a famine of currency and a serious bank crisis. The means of remittance and collection were almost entirely suspended. Individuals, corporations, and even the banks themselves drew and held all the money of any kind they could obtain. A curious feature of the situation was that there was more of a panic among the

banks than among the people; but the hardship was to business generally. Every class of business was interfered with, so that business operations of every kind were curtailed. Factories have suspended, workmen have been thrown out of employment, orders have been cancelled, the moving of crops has been retarded, exports have fallen off at a time of the year when they should be at their highest. Another serious result has been the reduction of the volume of foreign credits available, just at the time when they are most needed to offset the large imports of gold which have been made.

It was not the failure of a few banks which brought on the panic. It was the system which rendered a panic practically inevitable under certain conditions—and they are conditions which can be many times repeated. It was not lack of confidence on the part of the people, but lack of confidence in the banks themselves. They were fearful that the reserve system would break down, and it broke down. They were fearful that a sufficient amount of currency could not be supplied to meet the demands—the demands were all made at once, and there was not a sufficient amount to meet them. The remedy lies in improving the reserve system, so that the reserve deposits of the banks shall be kept where they are always and certainly available, and in imparting to our currency system an element of elasticity so that, when there comes a sudden demand for bank-notes, they can be supplied without obliterating the reserve. This can only be satisfactorily accomplished through the establishment by the government of a central bank of issue and reserve—the system which is working so satisfactorily in all of the great commercial centres of Europe. It would not only solve the two great problems of our banking system, but would also provide the machinery for conducting Treasury operations with the least disturbance.

The real weakness of our present banking system is the result of the provision regarding reserve deposits, through which the reserves are piled up in central reserve cities, without a sufficient amount of actual cash reserve on hand, so that when an emergency arises the reserves are not reserves at all. It would help against

UNITED STATES TREASURY AND THE FINANCIAL SITUATION

embarrassment to add to the reserve required all along the line, but the proper solution is to increase the amount and require all reserves to be held in a central bank organized for that purpose. The depositing bank would not only be sure that the funds were always available, but that as long as it was solvent it could go to the central bank and get any amount of cash needed on notes of its customers or other good security. With such a bank to depend on no solvent bank need ever doubt its ability to meet all possible demands.

The law concerning reserves, as it stands, requires that a minimum reserve of twenty-five per cent. on deposits be held in lawful money in the vaults of the central reserve city banks. The reserve cities must also keep twenty-five per cent. reserve, one-half of which may be on deposit in the central reserve banks. Banks in all other cities are required to keep fifteen per cent., three-fifths of which may be on deposit in reserve or central reserve cities. With any lack of confidence this system is necessarily a source of weakness instead of strength. Realizing upon what small margins they depend, each bank is, in self-defence, impelled not only to collect its loans, but to withdraw its reserve deposits. Deposits of \$10,000,000, in country or non-reserve banks call for a cash reserve to be kept in those banks of only \$600,000, with \$900,000 on deposit in reserve city banks. These banks must have in their vaults only \$112,500 of the amount, with the same amount on deposit in central reserve cities, where, in turn, there need be on hand but \$28,125 representing it. There is, therefore, but \$740,625 in cash, kept, unloaned; anywhere, against this deposit of \$10,000,000 in the country banks. Of this only \$140,625 is outside the banks' own vaults. If there is a reduction in the deposits of the country banks of \$150,000 out of the ten millions, only one and one-half per cent., it calls for more cash than has been kept on hand in reserve banks for the whole ten millions. What wonder that the fall demand for \$200,000,000 in currency, for crop-moving, always causes anxiety, and that when it is accompanied by a withdrawal of deposits and curtailment of credits, caused by uneasiness or

distrust, the banks are forced to drastic measures in self-defence.

There is nothing new in this situation. It has been known to all students of our banking and currency system, and has been written and talked about for many years. It has produced panic after panic, and a stringency in the money-market every fall for forty years. It was wholly due to this that the crisis of October assumed the phase of a bank panic and spread over the country. There was no other reason at all why the banks as a whole should have become involved, and their business and that of all of their customers disturbed as it was. All that was needed to have prevented this was a proper system of credit bank-note currency and bank reserves, both of which would have been supplied by a central bank of issue and reserve. There would have been no scarcity of currency, no derangement of domestic exchange, and no panic among the banks or among the people.

The only way in which bank-deposit credits can be properly protected from sudden calls, when all banks may be involved at the same time, is by a system of note credits which can be at any time and immediately exchanged for deposit credits. They are essentially the same thing, and they should be daily, hourly, if necessary, convertible from one to the other. With such a system there is no inflation or expansion when a note is paid out and no contraction when a note is returned. It makes no difference to the bank, or to any one but the customer, who uses either at his option, whether the deposit remains in the bank as a credit to be checked against or is taken away in the shape of a circulating note.

Our bond-secured bank-notes offer no help to a bank in sudden calls for deposits. They are a fixed currency, issued on the secured-currency principle, as distinguished from the credit or banking principle. When issued they stay out indefinitely, only returning to be renewed when worn out. It is only when the bonds for security can be borrowed or some government deposit is obtained that they are of any value in meeting an emergency. It will not help the matter to increase the volume of bonds. It would only increase

UNITED STATES TREASURY AND THE FINANCIAL SITUATION

the volume of rigid, unelastic notes. They would only be a power of expansion till they were issued. Then they would stay out, with no tendency to contraction when not needed. There would be no temporary expansion possible to meet the sudden demands of an emergency. We must have a note circulation which can change quickly and automatically in response to demands. Contractibility is quite as necessary as expansibility. Several of the panic reliefs which have at various times been suggested have good points. They would serve a purpose in quieting a panic after it is under way, but not in preventing it. The use of clearing-house certificates by the banks has been found a very efficient means for their defence, and on many occasions has probably prevented a great number of bank failures during panics. But they are only half-way measures. They carry us no farther than to the inevitable conclusion that we should have a national and central bank of issue and reserve. Clearing-house certificates, which are really credit notes on a large scale, should be issued by a central bank under government authority. This would have none of the disadvantages of the other system, while it would have all of the advantages and many more besides.

The real need is for something that will prevent panics, not for something that will relieve them; and the only way to attain this is through the agency of a governmental bank. The experience of all other countries has demonstrated this. We shall surely have panic after panic till we learn the plain lesson which the others have learned and adopt the only efficient, scientific, and proper means to protect our business interests. It is a matter of greater importance to the people at large than it is to the banks themselves. The banks devise ways and means to stand together, with the aid of the clearing-house, and by suspension or partial suspension of payment to bridge over and avoid failure. But the other business interests of the country are left almost in a state of chaos. The machinery of domestic exchange suddenly stops. Collections and remittances are almost impossible. Manufacturers are forced to suspend. Workmen are thrown out of employment. Business men are forced to fail

through no fault of their own. There is no citizen of the United States who is not in danger of more or less loss and embarrassment. And worst of all is the long period of depression which follows a panic, bringing suffering and privation to those who are in no way to blame. The thing which is absolutely essential is a banking system with bank-notes which will be responsive to the demands of business and will as readily contract as expand; with a system of bank reserves which shall be real reserves and always immediately available.

The installation of a central government bank would be of incalculable value to all of the business interests of the country, and it would also solve the problem of the relations of our Treasury Department to business. It would provide a reliable and efficient system of handling our government finances, add stability and safety to our banking system, and shield and protect the citizen in all the relations which are so vital to him for the conduct of his business and the support of his family. When the revenues of the government are in excess of the expenditures there is always the problem before the Secretary of the Treasury as to how, quickly and efficiently, to replace in circulation the money which the government is forced to collect. To deposit it with the banks is the only means available, but that course is unsatisfactory, unsystematic, and inefficient. It is always a course provoking criticism and complaint. A central government bank, to which all revenues could be paid and through which all disbursements could be made, would be far better for the government and result far better for the people.

Such a bank should not be allowed to do a general commercial business. It should be confined to the government business, the issue of credit notes, the receiving of reserve deposits from other banks, the discounting of their paper on approved security, or rediscounting of their notes from their customers. It should have the right to deal in bonds of the government, and probably of States and municipalities, but not in stocks. It should have such authority for dealing in foreign exchange as would enable it to accumulate gold credits abroad and import gold and bullion

UNITED STATES TREASURY AND THE FINANCIAL SITUATION

when needed for its reserve. It should have exclusive right to issue bank credit notes, and it could thus regulate the issue of notes in accordance with the demand, which would be determined automatically and with perfect precision through its relations with other banks. We need make no change in the present system of bond-secured notes of national banks, nor need we disturb the present volume of currency.

Such a bank would also be a great aid in the establishment of a postal savings-bank system, determining at once how the deposits should be handled and invested to prevent such savings-banks only adding to the amount of money which the government already takes out of circulation. It would also greatly improve the efficiency and value of the Treasury Department, making it a means of assistance and benefit to business, and would make our currency and banking system a source of impregnable strength in times of financial stress. It would absolutely prevent, in the United States, the recurrence of any widespread bank panic. It would add to the stability of our business in every line and give us a banking and financial system equal to any in the world.

The panic of October, 1907, only endorsed the lesson of the panics from 1857 to 1893, in demonstrating beyond denial that perfectly solvent banks, if isolated units, without co-operation, cannot protect themselves and save themselves from failure without such suspension of payments as to produce demoralization in all the business of their customers. Well-managed, sound, and solvent banks have often been forced to refuse payment, and commercial, industrial, and financial affairs have been thrown into confusion in the past, and will be in the future until the government provides the necessary machinery to protect them in times of excitement. The nations' banks must depend upon the nations. They do in other countries. They must in ours. Our financial stability will be subject to constantly recurring attacks until this plan becomes an established fact.

The Lessons of the Panic of 1907.—This panic was due chiefly to the excessive manufacture of securities during the past ten years. Every panic has its

special phases. While there is a similarity in the evolution of each, yet no two spring from exactly the same causes. The experience of one crisis is the lesson which guards against the same errors in the next; but, after the law has tardily and clumsily patched over the weak spots in old conditions, some new form of enterprise in finance brings on a new period of over-speculation and unwise banking. The panic of 1873 was largely due to over-extension of railways; that of 1893 was precipitated in this country by the danger of departure from the gold standard, although there were deeper causes which affected the whole financial world. In the panic of 1907 demands for capital from the railways had their share, but they were less influential than the abuse of industrial securities.

The essential feature of the recent panic was the collapse in prices of the great mass of securities poured upon the market since the revival of enterprise at the close of the last century. There were two possible dangers in this creation of new securities—some of them might not be good; and even if they were good the amount might be greater than the available supply of capital would absorb. The difficulties of the recent situation were, chiefly, that private industries of many kinds were turned into the form of the joint stock company with a rapidity which disregarded important financial safeguards in detail and created an extensive volume of securities in gross. The absence of proper cash reserves, the issue of large volumes of securities against good-will, and the effort to persuade the public that this good-will would be speedily converted by proper economies into great profits, were among the features common in some respects to all periods of inflation, but carried on this occasion to an unusual degree of variety and ingenuity.

A few far-sighted and resourceful men, impressed with the evils of unrestricted competition, devised the first mergers. When the possibilities of the system were once revealed, men of financial daring, but of less constructive genius, sought to apply the new formula to every industry they could lay their hands on. The possibility of getting rich overnight by the creation of securities dawned with such

UNITED STATES TREASURY AND THE FINANCIAL SITUATION

dazzling power upon the mind of the promoter that he was able not only to deceive himself as to the ultimate results, but, by dangling the golden bait before conservative bankers and offering to share with them the spoil, to tempt them as well as the public. Private enterprises were turned into corporate form, promoters approached the heads of established industries with offers to buy out their interest with bonds; the mania to "put together" competing interests spread to every hamlet where there was a mill or a factory.

New issues of securities have gone on during the past decade at an amazing pace. For the United States alone the careful compilation of the *Journal of Commerce* puts total issues in 1906 at \$1,637,013,350 and for 1907 at \$2,102,552,000. When these amounts are added to estimated amounts of \$35,000,000,000 already existing in 1905, it appears that nearly one-third of the wealth of the country is represented by negotiable securities. Careful estimates for the entire world, made by the *Moniteur des Intérêts Matériels*, put the net demands for the new capital in 1903, after eliminating refunding operations, at \$1,846,500,000; for 1904, at \$2,431,700,000; for 1905, at \$3,364,600,000; and for 1906, at \$3,125,000,000. The figures for 1907, when fully compiled, are likely to be much larger. The total volume of securities in the world, with many probable omissions, is computed by experts at over one hundred thousand million dollars.

It is impossible to make comparisons for previous years for all classes of corporations, because the data are not available; but in several great classes where statistics have been kept, in the United States, including government issues, steam railways, street railways, national banks, and trust companies, the par value of securities outstanding increased by nearly 25 per cent. from 1900 to 1905 and by 50 per cent. from 1890 to 1905.

Inevitably the issue of such a mass of new paper upon the world's markets, even if the paper had represented absolutely sound enterprises, would have created an opportunity for speculation such as the world has never seen. By the organization of the American system of dealing in

securities, facilities are afforded for frenzied speculation which are lacking in Europe. Among the factors which offer this encouragement are the concentration of idle money from the West in New York when it is not needed for moving the crops; the system of permitting reserve deposits by national banks in New York, Chicago, and St. Louis; the system of daily settlements on the New York Stock Exchange, instead of fortnightly settlements, as in London, with the wide fluctuations which it causes in rates for call money; the acceptance of cash margins for speculating in securities from persons without financial responsibility to an extent unknown in Europe; the absence of elasticity in the currency system; the employment of national-bank notes instead of gold in local banking reserves; and the lack of any central control of the discount rate or the gold supply. Added to these local factors have been several of worldwide character, of which the large issue of securities and the rapid increase in the production of gold have been important.

It is not possible to deal here with all these elements of the problem. It is proposed only to refer to several which are either of the first importance or have not been given their full weight in other discussions of the subject.

In the first place, there is a fundamental error, appreciated by but few, even among conservative bankers, in the theory that securities represent circulating capital. In fact, they represent, almost invariably, fixed capital—divisible shares or obligations of railways, buildings, and factories. The distinction between fixed and circulating capital is somewhat abstruse for the unprofessional mind; but it means that savings which have been put into permanent properties cannot be gotten out of that form, while savings which have been put into the ordinary processes of production in the form of raw materials and wages come back within a year, usually in a few months, in the form of cash paid for the articles produced and the labor employed. But, in more concrete form, the manufacturer who employs his capital in buying wool and paying wages to turn it into cloth has reason to expect that the cloth will be sold and that the transaction will be completed within a

UNITED STATES TREASURY AND THE FINANCIAL SITUATION

limited time. The bank which takes a note based on such a transaction knows that the note will be paid from the proceeds of the sale of the cloth. When the transaction is completed the money is paid and the debt is extinguished. If the demand for woollen cloths falls off, the manufacturer buys less wool, the amount of cloth produced is smaller, and banking transactions shrink in proportion.

No such quick liquidation of the capital invested—no such adjustment of supply and demand—takes place when capital is in the form of stocks and bonds of railways and mills. The capital has been put into permanent form. The divisible shares are easily transferable, through the system of the stock exchanges and transfer offices, and to the untrained investor they doubtless appear to represent circulating capital in a form much more effective and negotiable than the promissory note of the merchant in the hands of a bank. But, when the tide of speculation turns and banks begin to reduce the valuation of securities pledged for loans, there is no automatic law under which the supply of securities decreases, as commercial paper decreases when business declines. If an insufficient supply of capital in the market is confronted by an excessive issue of securities, the struggle to obtain capital in exchange for securities becomes more intense than the fabled struggle of the nations, under the theory of the bi-metallist, to drag over their shivering forms the scanty blanket of the world's gold.

Banks save themselves when securities decline by demanding additional margins. If these margins are not forthcoming securities are thrown on the market for what they will fetch, prices tumble with a crash, and every broker or speculator is seized with panic. By these processes, while the quantity of securities remains rigid or is increasing, their value expressed in prices shrinks by the pressure of liquidation. It is an application, in a sense, of the same principle which is laid down in the quantity theory of money. Securities fall in the ratio in which the supply of circulating capital has been diminished. The banks are saved, but the investor finds his properties shrunk far below the price he paid; and the specu-

lator on margins, who has been dreaming of a fortune acquired overnight by the upward movement of prices, finds his margins wiped out and his golden dreams turned to leaden nightmares.

When to this condition in the American speculative markets, and to this policy of enormous loans on securities on the part of banks and trust companies, is added a currency system which has no adaptation to modern financial conditions, it is not surprising that panic and loss should occur. The lack of elasticity in the American bank-note system has been so often pointed out that it need not be dwelt upon in this article. There is a very serious menace in the situation, however, which has not yet been much discussed. This is the expansion of bank-note issues under a system which does not keep them related to gold. Thus far in the history of the United States, since the resumption of specie payments in 1879, a combination of happy accidents has blinded the eyes of the public to the danger of issuing notes upon bonds. The danger comes not chiefly from lack of quality in the bonds, but from the paper inflation which would ensue if bond issues became excessive.

Limited as circulation has thus far been to United States bonds, this menace has not confronted the country as a realized fact. It would loom large, however, if the proposition were once seriously entertained of allowing indiscriminate issues of bank-notes upon other classes of bonds. Safeguards regarding the quality of the bonds would afford no protection against the wildest paper inflation if the quantity available were beyond the legitimate currency needs of the country. If municipal bonds alone were admitted to the list of securities for circulation over \$2,000,000, securities for circulation, over \$2,000,000, 000 would be available. Steam-railway \$6,000,000,000; and, if only half fell within the provisions of the law prescribing their quality, there would be an opening for an inflation of the paper circulation exceeding in volume anything which has ever taken place in the most destitute southern republic.

The essential danger of bank-note issues on bonds is that the quantity of bonds has no relation to the volume of current business, and notes thus issued are not sub-

UNITED STATES TREASURY AND THE FINANCIAL SITUATION

ject to the great touchstone of the world's values, the ebb and flow of gold between international markets. If \$1,000,000,000 in new paper were suddenly infused into the circulation of the United States the effect would be to drive abroad approximately \$1,000,000,000 in gold. This would mean suspension of gold payments, descent to an irredeemable paper basis, and a repetition of the unhappy experience of France with the *assignats* and of our own country with Continental money. The value of the security in liquidation would weigh little against the excess of the quantity of tools of exchange, and the absence of any provision that their quantity should be governed by the tests of values in all sound markets—redemption in gold on demand and the maintenance of adequate gold reserves.

Curiously enough, the country has been going through a sort of paper inflation of this nature without realizing it. State and private banks and trust companies are usually permitted by State law to carry bank-notes in their reserves. As a matter of fact, they carry all forms of currency; but the fact that they are authorized to hold bank-notes and are not required to hold lawful money only, as are the national banks, is practically equivalent to permitting them to build up their credits upon the bank-note, which is only another form of credit. If one form of credit can be thus used as a reserve against another, practically no limit is fixed to the excesses of speculation.

What has happened to demonstrate this theory? A glance at the expansion in State and trust company banking affords the answer. The aggregate figures for all these institutions, except national banks, and including savings-banks, are as follows:

GROWTH OF STATE BANKING.			
	1900.	1907.	
Number of institutions	9,519	13,317	
Total resources....	\$5,841,658,820	\$11,168,514,516	
Cash reserves.....	220,667,109	391,847,497	

This table shows that the State banks and the trust companies have been able, by increasing reserves by about \$171,000,000, to increase the volume of their obligations by \$5,325,000,000. The reserve stands in the ratio of less than four per

cent. of total liabilities. This percentage would be somewhat improved, of course, if only deposits were taken into account instead of gross liabilities; but for the purpose in view here the gross figures will serve equally well as an illustration.

Whence came the cash to increase reserves sufficiently to expand credit by five thousand millions? In any European country the answer would be that it must have come by the importation of gold. And the gold could be obtained only by making such prices on export commodities and on securities, and such rates for money, as should prove attractive to foreign holders of gold. But, in the United States, expansion of bank-note issues occurred from \$246,277,222 on January 1, 1900, to \$687,340,835 on December 28, 1907. Here was an increase of about \$440,000,000 in a form of credit counted by State banks as reserve money—sufficient to form the tottering foundation of ten thousand millions of an airy structure of new credits! Perhaps those bankers who have manufactured credit through State banking institutions to the extent of five thousand millions are to be congratulated, like Clive, upon their moderation, when the increase in bank-note circulation alone would have permitted them to add another five thousand millions if securities had been manufactured fast enough to afford them the basis for making loans.

A volume might be written upon the dangers of this sort of financing; and yet it has gone on so gradually and unobtrusively that only with the appearance of the assembled figures of the comptroller's report for the banks of all the States has the amazing character of this inflation been revealed.

What are the remedies against such dangers in future? There are many which might be considered—the stricter regulation of trust companies, already proposed by Governor Hughes; changes in Stock Exchange methods which would diminish speculation on insufficient margins; regulation of corporations after the English fashion—not for the purpose of clubbing the corporations over the head, but of protecting the investor; and a currency system which will afford a sheet-anchor in time of stress.

UNITED STATES TREASURY AND THE FINANCIAL SITUATION

Macaulay declared of the American Constitution that it was "all sail and no anchor." He might have made the same declaration of our existing financial system. When the crisis came, conservative and resourceful skippers, who had watched with forebodings the reckless crowding on of sail by reckless boy captains, came to the front and welded together a few temporary anchors out of such remnants of conservatism and sound finance as they found at their hands. They saved the ship by warping her off the rocks. What is needed, however, to keep the ship upon a steady course is a strong, permanent, and well-tested anchor under the direction of an intelligent and far-sighted skipper with unquestioned power to act. This would be afforded, so far as the banking system is concerned, by the creation of a central bank of issue, with authority to rediscount for other banks, to issue its notes to meet business demands, to keep its reserves in gold, and to regulate its general policy by the state of the foreign exchanges as reflected by the movement of gold.

Every other advanced commercial nation has such an institution. France adopted it under the great Napoleon; Bismarck made it a part of the unification of the German Empire in 1873; backward Spain came to it in 1874; Austria-Hungary and Russia adopted it when they sought to put their finances upon a sane basis. Even Japan rejected our system of a bond-based currency issued by local banks and entrusted her currency system to the Bank of Japan in 1882. Italy practically adopted the system after the bank scandals of 1893; and as recently as 1904 a central bank went into operation in Sweden, and in 1907 in the Swiss republic. Only by such an institution, directed by officers approved by the government, can the requisite unity be given to the financial system. The unity of action secured tardily in all our great panics by the union of leaders for self-preservation would become an established and smooth-working system.

A central bank stands like a Gibraltar amidst the waves of financial turmoil, where isolated banking units perish. With such a power of regulating the money-market, the grotesque gyrations of call

rates for money, which make our market a wonder for civilized nations, would cease. With such an institution, the disgraceful spectacle of currency suspension, in time of profound peace, by all the banks of the richest nation in the world would be no longer possible. But until some of these reforms are inaugurated New York can never permanently command foreign capital at will, nor become a centre upon which foreign exchange would be drawn in transactions outside her own immediate local needs. Our present financial system is the outgrowth of Treasury needs in 1863. It handicaps this country in the contest with financial rivals as completely as an old side-wheeler of 1863 would be handicapped in the race across the ocean with the *Lusitania* or the *Mauretania*, or as the old wooden ship-of-the-line would be outclassed under the fire of a modern battle-ship.

Our Present Crisis.—In an effort to judge concisely the character, the causes, and the probable result of the 1907 panic, I have made a comparison between the present panic and the other great panics which have occurred in this country, and which have to a greater or less degree involved the world's markets. By "great panic" I mean one in which the country's banks have practically all suspended payments. This country has experienced five panics of that description—in 1837, 1857, 1873, 1893, and 1907. There were a number of intermediate disturbances or semi-panics, but they did not prostrate the country commercially and industrially. The similarity of the conditions which prevailed at these periods forces one to the conclusion that in each and every instance the same underlying cause occasioned the inevitable crisis.

The most striking similarity is to be found in the index price of commodities. In each panic the index number reached its greatest altitude. In no other year can one find such high prices for commodities as prevailed immediately before and up to these panic periods. Our own index numbers do not run back to the early panics, but Dr. Soetbeer and Mr. Saurbeck clearly demonstrate the high range of commodity prices in 1837, 1857, and 1873. Dr. Soetbeer took one hundred Hamburg articles and fourteen articles of British

UNITED STATES TREASURY AND THE FINANCIAL SITUATION

export. Mr. Saurbeck took forty-five English prices. In America both Dun and Bradstreet show that commodity prices in June, 1907, were the highest ever known in America, ranging, as the index number did, some fifty per cent. higher than in 1906.

The question naturally arises: What caused the commodity prices to rise to such heights before these panic periods? The fundamental cause in every instance was the increase in the circulating medium of exchange, or money. That increase, though more or less gradual, has always been accompanied and followed by an extension of business in every quarter, apparent national prosperity, speculation in stocks and land, until credit became unduly expanded to a point of inflation. That condition has been accompanied by national and personal extravagance, resulting usually in over-production and over-stocking; until, finally, in a cloudless sky, in the midst of plenty, every one is astonished to hear a crash.

Chaos ensues. One to five years of stern economies and readjustment follow. Then everything becomes normal, and again we pluck up courage and start on our ride for another fall. We learn little by our experience—and in a generation one forgets!

It is all Human Nature. The natural phenomena of this panic of 1907 in no wise vary, in any marked degree, from those which have attended every other great panic.

Political economists all recognize that the political, industrial, and social elements which make up our life are very closely related to the circulating medium of exchange recognized among nations. Alter that by greatly increasing or diminishing its volume, particularly the former, either by the operation of natural economic laws or by legislating a substitute for money, and the political, industrial, and social elements must adjust themselves to the new conditions, and before that adjustment can be completed almost invariably a panic ensues.

It is interesting and illuminating to read the Presidents' messages in the years of the great panics. They all attribute the respective panics to our wretched banking system; yet we have done nothing

to rectify it, and probably we shall not. The four previous panics occurred, respectively, in the inaugural years of the Presidents, and in two of the panics—namely, those of President Van Buren and President Grant—a special session of Congress was called to act upon currency legislation. Another curious coincidence is that the great New York fire occurred in 1835, the Chicago fire in 1871, and the San Francisco fire in 1905, in each instance two years before the panic.

Let us take up the panics in order.

Panic of 1837.—The States in 1832 substituted metallic for paper currency, and in 1835 paid off the national debt, at the same time abandoning the United States Bank, though Congress rechartered the Bank and President Jackson vetoed it.

The government deposits were taken from the United States Bank and were placed in the various banks in different sections of the country. These banks were permitted to issue bank paper, which was done to excess. That was the fundamental cause of the panic of 1837. The banks suspended specie payments in May; in the fall the United States Treasury receipts were insufficient to defray the expenses of the government.

Following are a few extracts from President Van Buren's special message to Congress. His message first states that there was great diversity of opinion as to the real causes. He attributed the panic to:

"Over-action in all departments of business, stimulated to destructive consequences by excessive issue of bank paper, and by other facilities for the establishment and enlargement of credit. The consequences of this redundancy of credit, and the spirit of reckless speculation engendered by it, were a foreign debt contracted by our citizens, estimated in March last at more than \$30,000,000; the extension to traders in the interior of our country of credit for supplies greatly beyond the wants of the people; the investment of \$39,000,000 in unproductive public lands; . . . the creation of debts for an almost countless amount for real estate in existing and anticipated cities and villages, equally unproductive, and at prices which now seem to have been greatly disproportionate to its real value; the expenditure of immense sums in improve-

UNITED STATES TREASURY AND THE FINANCIAL SITUATION

ments which in many cases have been found to have been ruinously improvident; deflection of much of the proceeds which should have been applied to other matters, such as the exportation of wheat to Europe [the States imported wheat in 1837]; . . . and, finally, without enumerating other injurious results, the rapid growth among all classes, and especially in our great commercial cities, of luxurious habits of living founded on merely fancied welfare, and detrimental alike to the industry, the resources, and the morals of the country.*

In 1837 the average of commodity prices reached the highest point touched, up to that time, in the history of the country.

Panic of 1857.—In 1849 gold was discovered in California. The total world's production of gold from 1700 to 1800 was \$1,300,000,000; from 1800 to 1850, \$820,000,000; and for the seven years, 1850 to 1856, inclusive, \$820,000,000.* This enormous increase in the production of gold, half of which occurred in the United States alone, caused an excessive extension of credits with resultant inflation. Everybody was eager to get rich immediately. Hence the fundamental cause of the panic of 1857 was this enormous production of gold.

Listen to President Buchanan's reference to the panic in his message to Congress, December 8, 1857:

"In all former revulsions the blame might be fairly attributed to a variety of co-operating causes, but not so on the present occasion. It is apparent that our existing misfortunes have proceeded from our extravagant and vicious system of paper currency and bank credits, inciting the people to wild speculation and gambling in stocks. These revulsions must continue to recur at successive intervals so long as the amount of paper currency and bank loans and discounts shall be left at the discretion of 1,400 irresponsible banking institutions, which, from the very law of their nature, will consult the interests of their stockholders rather than the public welfare."

In 1857 the average price of commodities again reached the high point of 1837.

* Soetbeer's *Materialism*.

Panic of 1873.—The absorption of \$400,000,000 of gold by Germany to place the Empire on a gold basis, and the five billion francs paid Germany as a war indemnity, together with the enormous increase in the production of silver, which all the world except England and Germany recognized as a medium of exchange, was fundamentally the cause of this panic. The silver production amounted to \$40,000,000 annually in the fifties, \$55,000,000 in the sixties, and \$91,000,000 in the seventies. In 1872 silver bullion prices commenced to decline, breaking for the first time in twenty years sixty pence an ounce.

After our Civil War, with an unsecured paper currency, we plunged into the excesses of credit inflation and speculation with nothing to back it. The \$50,000,000 of gold which we produced per annum we exported. Our imports exceeded our exports by \$109,000,000. No wonder this panic lasted five years, from 1873 to 1878.

The silver question aggravated this situation, as it did in the period of 1893 to 1896 to a much greater degree.

President Grant's message relating to the panic of 1873 sounds somewhat like President Roosevelt's groping financial utterances in his last message. The following are some extracts from President Grant's message:

"In the midst of great national prosperity a financial crisis has occurred which has brought low fortunes of gigantic proportions. . . . We can never have permanent prosperity until a specie basis is reached. . . . Exports must exceed imports. . . . Elasticity of circulating medium is desired. . . . Patent to the most casual observer that much more currency is required to transact the legitimate trade of the country during the fall and winter months while the various crops are being moved."

The average commodity prices in 1873 reached a new high record in the country's history up to that date.

Panic of 1893.—The fundamental causes of this panic were the enormous production of silver and our silver-coinage acts, causing inflation of an unstable currency, intensified by the demonetization of silver which had commenced throughout the world. After fifteen years of prosperity every one was lulled to sleep. The lesson

UNITED STATES TREASURY AND THE FINANCIAL SITUATION

of 1873 was forgotten. Credits were inflated; imports for the first time in years exceeded exports; land speculation was rampant; commodity prices, for the first time in twenty years, rose close to the high prices of 1873; merchants were over-stocked; many railroads had been "skinned" to enrich their executive committees; and our gold reserves were depleted. This panic lasted four years owing to the insistence by one-half of our population upon bimetallism, or the free coinage of silver at the rate of sixteen to one. Our currency was finally recognized as being on a gold basis by the election of President McKinley in 1896. That was the first bright lining to the clouds we had seen in four years. President Cleveland called a special session of Congress to deal with the currency situation on August 8, 1893, and in his message he said:

"The existence of alarm and an extraordinary business situation involving the welfare of all our people has constrained me to call together in extra session the people's representatives. With plenteous crops, with abundant promise of remunerative production in manufacture, with unusual invitation to safe investment, and with satisfactory assurance to business enterprise, suddenly financial distress and fear has sprung up on every side. Many institutions have suspended because assets were not immediately available to meet the demands of frightened depositors. Depositors and individuals are content to keep in hand the money they are usually anxious to loan, and those engaged in legitimate business are surprised to find that securities for their loans, though heretofore satisfactory, are no longer accepted. Fortunes supposed to be fixed are now becoming conjectural, and loss and failure have invaded every branch of business.

"I believe these things are principally chargeable to Congressional legislation touching the purchase and coinage of silver by the general government."

Panic of 1907.—This panic in no wise varies in any degree, in its natural phenomena, from the other great panics. The fundamental cause of the present panic is the enormous gold production. During the last ten years, inclusive of 1907,

\$3,200,000,000 of gold has been produced, one-half as much again as all the gold produced in the 150 years from 1700 to 1850. In 1900 the production was \$254,000,000; to-day it is \$407,000,000 for 1907.

This augmentation of the circulating medium has had its inevitable natural result in rapidly rising values of commodities to a record level, causing production to be unduly stimulated, with unparalleled expansion of railroad improvements and manufacturing extensions throughout the entire business world—the banks, in consequence, extending their credits to a point of inflation. The above concomitants of all panics were also attended with the usual speculation in real estate and stocks.

The excessive inflation of credit was finally checked by the exhaustion of the currency upon which credit should be based, as was evidenced by the rapid rise of discount rates to a prohibitive level; railroads which in 1902 issued bonds on a three-per-cent. basis were obliged to pay eight to ten per cent. on short-term notes. These rates forced retrenchment, and retrenchment caused the edifice of credit to topple over.

It is probably true that President Roosevelt's attitude toward swollen fortunes, railroads, and other corporations has hastened the crisis; but my personal opinion is that those who attribute this panic to his attitude are wrong, and that he in no sense has even been a contributory cause. His attacks drew to the surface, somewhat violently perhaps, some of the most deeply rooted evils which have always lain at the base of every great panic—that is, dishonesty in the administration of great aggregations of capital, the exposure and correction of which, if successful, will work for the lasting benefit of the entire country. My only wish is that our President in his denunciatory policies would absorb in his heart—making the whole country feel that it is there—the spirit expressed by his acknowledged ideal, President Lincoln, in those words contained in his last inaugural address: "With malice toward none, with charity for all." This would obviate the danger which even the President's best friends fear—namely, that of arraying class against class.

UNITED STATES TREASURY AND THE FINANCIAL SITUATION

Corporations, whether trust or not, honestly managed, are a national bulwark and equally advantageous to rich and poor alike. The poorer man with his surplus has always the opportunity to invest his earnings in any corporation he desires, and it is now the policy of all enlightened corporations to give special terms for investment to their employees; but in view of the insurance, Alton, Metropolitan, and other disclosures, it must be apparent to the densest intellect that the public must be guaranteed against dishonest manipulation of corporation affairs.

The best reason I can give why this panic arrived ahead of time, the twenty-year period, is the distrust and lack of confidence which was disseminated throughout the country by the insurance disclosures, and then the revelations which indicated that the executive committees of our largest and strongest corporations, directed by men whose names the country had been taught to conjure with, were running those corporations largely for their own benefit.

Public confidence was destroyed. President Roosevelt, seeing his opportunity, has rightfully pressed the situation, so that we are reasonably sure of corrective legislation.

It is now popular for the so-called "yellow" writers to attribute this panic to Stock-Exchange speculation. As a matter of fact, there never was a panic in which the Stock Exchanges were so little involved. To start with, the business on the Stock Exchange during the past year has been much less than in 1901, 1905, or 1906. Following are the figures:

	Bonds.	Stocks.
1901.....	\$981,781,010	251,786,341 shares
1905.....	1,016,034,550	260,220,317 shares
1906.....	676,004,330	280,179,477 shares
1907.....	540,000,000	196,000,000 shares

When one considers the large increase in securities listed on the Stock Exchange, there was relatively less speculation in 1906 than in 1901. Furthermore, the loans in 1907 of the New York Stock Exchange members with the banks have been less than any year since 1900.

The United States Comptroller's report of September 4, 1906, showed that New York banks were loaning \$100,000,000 less on stocks, bonds, other personal se-

curities and mortgages, than on August 25, 1905. The Comptroller's report for 1907 is not yet out, but any one conversant with Stock-Exchange loans knows that Stock-Exchange houses rarely have been such small borrowers of money.

Naturally, one asks: What does the \$1,100,000,000 loans and discounts represent if it does not represent Stock-Exchange borrowings? It represents loans on municipality obligations, largely those of New York City, loans on underwritings of bonds, stocks, and short-time notes of railways, also mortgages and advances to large railway and industrial corporations which have found it impossible to sell their paper. Such loans as the above are fixed and practically impossible to liquidate. The central reserve cities hold unusually small amounts of commercial paper. This class of paper has gone to the country banks. It was estimated by a Chicago banker that the country banks held \$300,000,000 on November 1, 1907; this paper is gradually being paid off, and the cash goes to the country and stays there. In three years the country banks have increased their loans \$658,000,000, against \$70,000,000 in central reserve cities and \$213,000,000 in other reserve cities—a total of \$941,000,000 increase in loans, while specie and legal tender increased only \$40,000,000. In this enormous increase in loans and small increase in cash lay the weakness of the situation.

The above exposition should clearly demonstrate how little the Stock Exchange has had to do with the panic of 1907.

Stock speculation, like land speculation, and extension of loans by banks, is one of the concomitant factors in every panic. It is an incident. The Stock Exchange is a barometer of business. People usually sell that which they can sell most quickly and most easily, so as to protect their more involved commitments; consequently, the Stock Exchange feels all impending trouble first.

The country at large confuses Wall Street with the Stock Exchange. The Stock Exchange is the servant of the investors all over the country. Twenty-five per cent. of the total wealth of the country is in securities, and the Stock Ex-

UNITED STATES TREASURY AND THE FINANCIAL SITUATION

change represents the majority of that wealth in listed bonds and stocks. "Wall Street" represents nothing but individual capitalists whose financial schemes are carried out without the recognition or assistance of the Stock Exchange.

After comparing these various panics one finds much comfort in the thought that the present panic has been forced on before its legitimate time. It has found us with our farmers rich, our exports in excess of our imports this calendar year to the extent of something over \$435,000,000; our industries are not overstocked, and our merchants are not greatly extended. I believe this panic will prove more like that of 1857, and after one year's dull, not prostrate, business we shall, when the election is over and the reductions to be made in the tariff are thoroughly understood, rapidly regain confidence and give the world a merry war for supremacy in trade, particularly so with honest administration of our trusts and not too much governmental interference, for they will then be able to give a most excellent account of themselves. The country will realize that combinations of industries assure us against undue invasion of foreign manufacturers and effect a greater export trade, thus bringing about greater stability in wages and employment.

In view of the currency legislation which Congress proposes enacting this winter, I think President Buchanan's words have a special significance when he refers to "1,400 irresponsible banking institutions which, from the very law of their nature, will consult the interests of their stockholders rather than the public welfare." The "law of their nature" of our 6,500 national banks and 7,500 other banks is the same as that of the 1,400 banks in 1857, and there can be little doubt that President Buchanan's statement in a measure applies to the banks of to-day. The people believe that there is far too much speculation in the majority of our national banks. It occurs to me that to base the new currency bill upon the assets of the national banks as they stand would not be for the best interests of the people at large, as compared with the establishment of a central institution to be managed by the

government in the interests of the people. Why place the control of an elastic currency in the hands of institutions which have a significant interest in adjusting money rates to the production of dividends for their stockholders?

I doubt if the credit-currency scheme will protect the people. The banks and bankers will get the best of it; and, in the event of a great panic, with the artifices and devices which are sure to grow up under any such system, I believe the people would be apt to become thoroughly frightened and withdraw their savings from circulation in the future as in the past. Thus hoarding would not be averted and a panic would ensue.

I do not pretend to be a financial critic, but I have a strong conviction that the dignity and welfare of our government will best be served by establishing a central bank based upon our national banking institutions, forcing national banks to support the central bank on any basis the authorities deem wisest, regardless of prerogatives now assumed or vested.

Again, as an adjunct to the central bank, I believe a national postal savings-bank should be an integral part of the system. A postal savings-bank would protect the poorer classes and make their rest happier and their days more contented when panics rage and their employment is threatened. Further, it would make the poor man a better citizen, causing him to feel more a part of his country.

However, any bill which would give greater elasticity to our currency would mitigate our present plight. Given such a bill and a continuance of the gold production, which we have every reason to believe will not diminish in the near future, and values cannot permanently remain at their present level; but soon the economies forced upon us by the panic will regain for us confidence, and we shall once more find ourselves on the waves of prosperity.

United States Engineer Corps, a technical body under command of the chief of engineers and attached to the War Department. The corps is charged with all duties relating to construction and repair of fortifications, whether permanent or temporary; with torpedoes for coast defence; with all works of defence;

U. S. GEOGRAPHIC BOARD—UNITED STATES

with all military roads and bridges, and with such surveys as may be required for these objects, or the movement of armies in the field. It is also charged with the river and harbor improvements, with military and geographical explorations and surveys, with the survey of the lakes, and with any other engineer work specially assigned to the corps by acts of Congress or orders of the Secretary of War.

United States Military Academy. See MILITARY ACADEMY, UNITED STATES.

United States Mints. A mint of the United States was established in Philadelphia, Pa., by act of Congress in April, 1792, and began to coin money the next year, but it was not until January, 1795, that it was put into full operation. Coins issued from this mint bear no special letter. It was the only mint until 1835, when other mints were established at Charlotte, N. C., Dahlonega, Ga., and New Orleans, La. The mint established at Charlotte, N. C., was to be devoted exclusively to the coinage of gold which was taken from the North Carolina mines. All coins produced at this mint were to bear the mint letter "C" on their face.

The act of 1835 also authorized a mint at New Orleans, La., whose coins were to bear the mark "O." (See article on COINAGE, CONFEDERATE.)

The Dahlonega, Ga., branch of the mint was also authorized by Congress in 1835. It was intended to issue gold coins made

from metal taken from the Georgia mines, and regular coinage began in 1838. Almost all the coins of this mint are scarce. In 1862 the Confederates seized the mint and it ceased to operate.

The Carson City, Nev., mint coins bear the letters "C. C." The standard silver dollars issued with the dates of 1870, 1871, 1872, and 1873 are all very scarce.

A branch mint was authorized in 1864 to be operated at Dallas City, Oregon, for the coinage of gold and silver, but it never issued any coins.

In 1864 a mint was authorized to be established in Denver, Col., all coins to be made there to bear the mint letter "D." It made no coinage previous to 1906, but was used as an assay office only previous to that time.

The San Francisco mint was authorized in 1852 to coin both gold and silver, and since that year has coined a greater amount of gold and silver than any other mint, excepting the main mint at Philadelphia. Its mint letter is "S."

The following coins are no longer made: half cent, one cent, large copper, two-cent piece, bronze, 20-cent pieces; but at the time of writing there is pending in Congress a law proposing to re-establish the coinage of the half cent and of the three-cent piece. The latter coin to be in nickel with a hole in the center to differentiate it from the five-cent nickel.

UNITED STATES OF AMERICA

United States of America. The name given to the thirteen English-American colonies in the DECLARATION OF INDEPENDENCE (*q. v.*), July 4, 1776. In 1910 their number had increased to forty-six States and five Territories, besides the insular or non-contiguous possessions of the Philippine Islands, Porto Rico, Hawaii, Panama Canal Zone, Tutuila, Guam, Wake, and other Pacific islands. In that year Congress passed an act providing for the admission of Arizona and New

Mexico into the Union as the 47th and 48th States respectively. According to the thirteenth census (1910) the population of Continental United States was 91,972,266; of non-contiguous territory (including Alaska, 64,356; Hawaii, 191,909; Porto Rico, 1,118,012; and persons in military and naval service abroad, 55,608), 1,429,855—total for area of enumeration, 93,402,151. If to the foregoing total is added the population of the Philippine Islands, according to the census

UNITED STATES OF AMERICA

of 1903, 7,635,426, and estimates for Guam, Wake, and Tutuila islands, and the Panama Canal Zone, the grand total under the protection of the American flag would be about 101,100,000. For details of the population, see CENSUS, and for statistics and other information concerning the development of the country along the various lines of progress, see the titles of desired subjects in their alphabetical places throughout this encyclopædia.

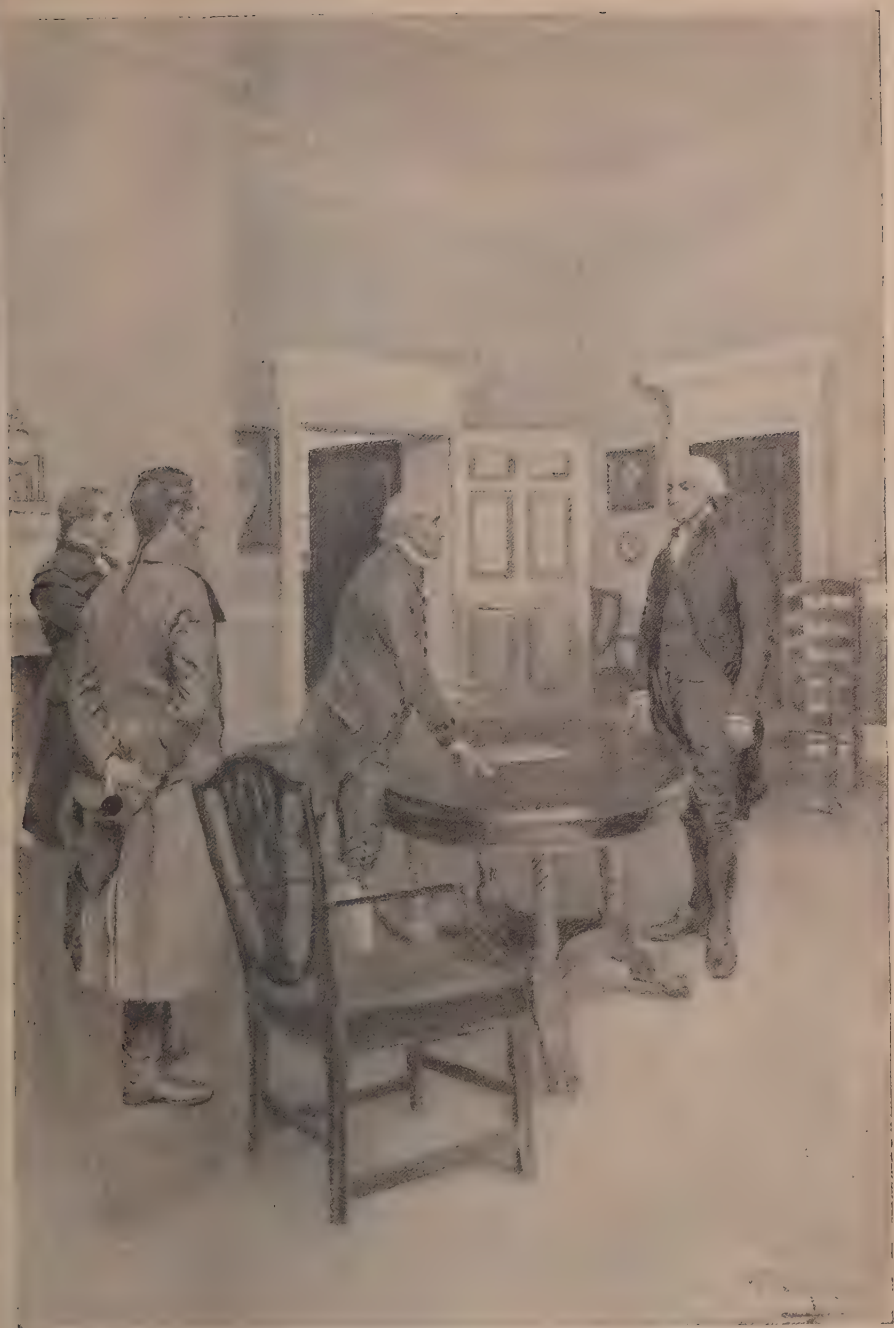

On Sept. 9, 1776, the Continental Congress resolved "that in all continental commissions where heretofore the words 'United Colonies' have been used, the style be altered for the future to the United States." In latitude it extends from Key

West, its most southerly point, 24° 33' N., to the forty-ninth parallel of north latitude. From this latitude, on the Pacific coast, the territory belongs to Canada to 54° 40', where Alaska begins, extending to the Arctic Ocean and embracing an area of over 590,000 square miles. In longitude it extends from the most easterly point of Maine, 66° 48' W., to 125° 20' W., on the main land.

The Congress has two Houses: the Senate, whose members are elected for six years by the State legislatures, and the House of Representatives, elected for two years by the people of the different States. Representation in the Senate is by States, without regard to population; in

WASHINGTON RECEIVING THE ANNOUNCEMENT OF HIS ELECTION TO THE FIRST
PRESIDENCY OF THE UNITED STATES

UNITED STATES OF AMERICA

the House of Representatives the representation is in proportion to population. The President of the United States is elected every fourth year by electors chosen by the people, each State having as many electoral votes as it has Senators and Representatives in Congress. For special history as to the events, administration, etc., of the United States, and of the separate colonies, States, and historical villages and cities, and of the individuals participating in the same, see under their respective heads.

Special attention is called to the five accompanying maps:

1. Map of census for 1910, compared with the census of 1900.
2. Population per square mile, by States, 1910.
3. Per cent. of urban in total population, by States, 1910.
4. Per cent. of increase in urban population, by States, 1900-1910.
5. Per cent. of increase in rural population, by States, 1900-1910.

Also to the following tables:

1. Progress of the United States in area, population, industries, commerce, etc., in four sections.
2. Total urban population, by States, in 1890, 1900, 1910.
3. Total rural population, by States, in 1890, 1900, 1910.
4. Population of metropolitan districts in 1900 and 1910.
5. Percentage of male population by elements, 1900-1910.
6. Percentage of males of voting age, 1900-1910.
7. General farm crops, acreage, 1879-1909.
8. General farm crops, production and value, 1899-1909.
9. Farms and farm property, 1850-1910.
10. Manufacturing industries, 1849-1909.
11. Table of principal industries and values of products in 1909.

Elements of the Population.—The accompanying tables summarize various elements and features of the population of continental United States as reported by the Census Bureau for 1910.

For totals of population in 1790-1910; totals by States, with increase, 1900 and 1910; totals of cities exceeding 25,000 in 1910, with changes since 1900; comparative rank of States in population, 1790-1910; and for total population per square mile, by States, 1890, 1900, and 1910, see CENSUS; and for the centre of gravity, 1790-1910, see CENTRE OF POPULATION.

Urban Population, 1890, 1900, and 1910.—The Census Bureau classifies as urban population that residing in cities and other incorporated places of 2,500 inhabitants or more, including New England towns of that population. In most sections of the country all or practically all densely populated areas of this size are set off from rural territory and incorporated as municipalities (variously known as cities, towns, villages, boroughs, etc.). In New England, however, this is often not the case. Many of the towns consist in part of distinctly rural territory and in part of densely populated areas which are not incorporated separately and for which it is impossible to make separate population returns. For this reason it has been necessary in the New England States to include with the urban population that of all towns having 2,500 inhabitants or more. The urban areas in New England, as classified by the census, therefore include some population which, in other sections of the United States, would be segregated as rural.

The accompanying table shows the total urban population and its percentage to the whole in the census years 1890, 1900, and 1910:

Rural Population, 1900 and 1910.—Urban population being defined as above stated, the remainder of the country is classed as rural, consisting (except in New England) of all unincorporated territory and of incorporated places of less than 2,500 inhabitants. There has been in every State since 1900 an increase in urban population, but in six States—namely, New Hampshire, Vermont, Ohio, Indiana, Iowa, and Missouri—there has been a decrease in rural population. In all but two States—Montana and Wyoming—the urban population has increased faster than the rural population, and generally at a much more rapid rate.

UNITED STATES OF AMERICA

Progress of the United States, 1790-1911.—The following table shows the progress of the United States in its area, population, and material industries from 1790 to the end of 1911:

PROGRESS OF THE UNITED STATES, 1790-1911.

UNITED STATES OF AMERICA

NOTES TO THE TABLES ON THE PROGRESS OF THE UNITED STATES, 1790-1911, ON THE FOUR PRECEDING PAGES.

- (a) Exclusive of Alaska and islands belonging to the United States.
- (b) Census figures, relating to continental United States; the figures for 1910 and 1911 represent estimates.
- (c) Census figures.
- (d) True valuation of real and personal property.
- (e) 1904.
- (f) 1791 to 1840, outstanding principal of the public debt, Jan. 1.
- (g) 1791.
- (h) Figures for the years 1791 to 1850 include the total public debt.
- (i) 1791 (34 months).
- (j) 1793-1795.
- (k) Gold and silver cannot be stated separately prior to 1876. From 1862 to 1875, inclusive, gold and silver were not in circulation except on the Pacific coast, where it is estimated that the average specie circulation was about \$25,000,000, and this estimate is continued for the three following years under the head of gold. After that period gold was available for circulation.
- (l) As the result of a special investigation by the director of the mint, a reduction of \$135,000,000 was made in the estimate of gold coin in circulation on July 1, 1907, as compared with the basis of previous years; and on Sept. 1, 1910, a reduction of \$9,700,000 was made in the estimate of subsidiary silver.
- (m) Includes notes of Bank of United States; State-bank notes; demand notes of 1862 and 1863; fractional currency, 1863 to 1878; Treasury notes of 1890, 1891, to date; and currency certificates, act of June 8, 1872, 1892 to 1900.
- (n) Individual and other.
- (o) Gold values, being 80 per cent. of currency values reported.
- (p) Includes value of buildings, \$3,556,639,496. The twelfth census was the first to collect statistics of buildings on farms.
- (q) Includes value of buildings, \$6,325,451,528.
- (r) Data of the Department of Agriculture, representing wealth production on farms. Figures for 1910 include products fed to live-stock.
- (s) Exclusive of neighborhood industries and hand trades, included in previous years.
- (t) "Ordinary receipts" include receipts from customs, internal revenue, direct tax, public lands, and "miscellaneous," but do not include receipts from loans, premiums, Treasury notes, or revenues of Post-office Department.
- (u) Includes corporation tax, \$20,951,781 in 1910 and \$33,516,977 in 1911.
- (v) "Ordinary disbursements" include disbursements for War, Navy, Indians, pensions, payments for interest, and "miscellaneous," but do not include payments for premiums, principal of public debt, or disbursements for postal service paid from revenues thereof.
- (w) Imports for consumption after 1860.
- (x) Domestic exports only after 1860.
- (y) Jan. 1, 1911.
- (z) Includes mules.
- (A) Dr. Soetbeer's estimated average for the 10-year period.
- (B) 1814.
- (C) Includes all productions prior to 1876 in Ohio, West Virginia, and California.
- (D) Last six months of 1891.
- (E) 1845.
- (F) Equivalent 500-pound bales.
- (G) Includes canal-boats and barges prior to 1870.
- (H) 1797.
- (I) Andrew's Colonial and Lake Trade.
- (J) Western Union to 1880; includes Postal Telegraph after 1880, except that in 1910 the figures relate to the Western Union only.
- (K) Not including messages sent by Western Union over leased wires or under railroad contracts.
- (L) 1810 to 1860, inclusive, from census of 1880; from 1870 to 1900, inclusive, from Rowell's Newspaper Directory; after 1900, from Ayer's American Newspaper Annual.
- (M) 1828.
- (N) Includes salaries for teachers only.
- (O) 1820 to 1850, total alien passengers arrived; 1820 and 1830, years ending Sept. 30; 1850, 15 months ending Dec. 31; 1840 and 1860, calendar years; after 1860, fiscal years ending June 30.

NOTE.—The following statement gives the name and population of each municipality of 5,000 inhabitants or more falling within each metropolitan district, except

UNITED STATES OF AMERICA

the central city itself, independent of county or State boundaries.

New York District.—New York: Yonkers city, 79,803; Mount Vernon city, 30,919; New Rochelle city, 28,867; Mamaronck village, 5,699. New Jersey: Newark city, 347,469; Jersey City, 267,779; Paterson city, 125,600; Elizabeth city, 73,409; Hoboken city, 70,324; Bayonne city, 55,545; Passaic city, 54,773; West Hoboken town, 35,403; East Orange city, 34,371; Perth Amboy city, 32,121; Orange city, 29,630; Montclair town, 21,550; Union town, 21,023; Kearny town, 18,659; Bloomfield town, 15,070; Harrison town, 14,498; Hackensack town, 14,050; West New York town, 13,560; Irvington town, 11,877; Englewood city, 9,924; Rahway city, 9,337; Rutherford borough, 7,045; South Orange village, 6,014; Nutley town, 6,009; Roosevelt borough, 5,786; Guttenberg town, 5,647.

Chicago District.—Illinois: Evanston city, 24,978; Oak Park village, 19,444; Cicero town, 14,557; Chicago Heights city, 14,525; Blue Island village, 8,043; Maywood village, 8,033; Harvey city, 7,227; Forest Park village, 6,594; Berwyn city, 5,841; La Grange village, 5,282. Indiana: Hammond city, 20,925; East Chicago city, 19,098; Gary city, 16,802; Whiting city, 6,587.

Philadelphia District.—Pennsylvania: Chester city, 38,537; Norristown borough, 27,875; Bristol borough, 9,256; Conshohocken borough, 7,480; Darby borough, 6,305. New Jersey: Camden city, 94,538; Gloucester city, 9,462; Burlington city, 8,336.

Boston District.—Cambridge city, 104,829; Lynn city, 89,336; Somerville city, 77,236; Malden city, 44,404; Salem city, 43,697; Newton city, 39,806; Everett city, 33,484; Quincy city, 32,642; Chelsea city, 32,452; Waltham city, 27,834; Brookline town, 27,792; Medford city, 23,150; Revere town, 18,219; Peabody town, 15,721; Melrose city, 15,715; Hyde Park town, 15,507; Woburn city, 15,308; Framingham town, 12,948; Weymouth town, 12,895; Watertown town, 12,875; Wakefield town, 11,404; Arlington town, 11,187; Winthrop town, 10,132; Natick town, 9,866; Winchester town, 9,309; Dedham town, 9,284; Braintree town, 8,066; Saugus town, 8,047; Norwood town, 8,014; Milton town, 7,924; Marblehead town, 7,338; Stone-

ham town, 7,090; Swampscott town, 6,204; Belmont town, 5,542; Wellesley town, 5,413; Needham town, 5,026.

Pittsburg District.—McKeesport city, 42,694; Braddock borough, 19,357; Wilkinsburg borough, 18,924; Homestead borough, 18,713; Duquesne borough, 15,727; McKees Rocks borough, 14,702; North Braddock borough, 11,824; Carnegie borough, 10,009; Sharpsburg borough, 8,153; Jeanette borough, 8,077; Millvale borough, 7,861; New Kensington borough, 7,707; Tarentum borough, 7,414; Swissvale borough, 7,381; Bellevue borough, 6,323; Wilmerding borough, 6,133; Carriek borough, 6,117; Rankin borough, 6,042; Etna borough, 5,830; Knoxville borough, 5,651; St. Clair borough, 5,640; East Pittsburg borough, 5,615; Glassport borough, 5,540; Coraopolis borough, 5,252; Munhall borough, 5,185.

St. Louis District.—Missouri: Wellston city, 7,312; Webster Groves city, 7,080. Illinois: East St. Louis city, 58,547; Granite city, 9,903; Madison village, 5,046.

San Francisco-Oakland District.—Berkeley city, 40,434; Alameda city, 23,383; Richmond city, 6,802; San Rafael city, 5,934.

Cleveland District.—Lakewood city, 15,181; East Cleveland city, 9,179; Newburgh city, 5,813.

Cincinnati District.—Ohio: Norwood city, 16,185; Madisonville city, 5,193; St. Bernard city, 5,002. Kentucky: Covington city, 53,270; Newport city, 30,309; Dayton city, 6,979; Bellevue city, 6,683.

Detroit District.—Wyandotte city, 8,287.

Buffalo District.—Lackawanna city, 14,549; North Tonawanda city, 11,955; Tonawanda city, 8,290.

Los Angeles District.—Pasadena city, 30,291; Long Beach city, 17,809; Santa Monica city, 7,847; Alhambra city, 5,021.

Milwaukee District.—West Allis city, 6,645; South Milwaukee city, 6,092.

Providence District.—Pawtucket city, 51,622; Warwick town, 26,629; Central Falls city, 22,754; Cranston city, 21,107; East Providence town, 15,808; Cumberland town, 10,107; Lincoln town, 9,825; Johnston town, 5,935; North Providence town, 5,407.

Washington District.—Alexandria city (Va.), 15,320.

UNITED STATES OF AMERICA

Kansas City (Mo. and Kans.) District.—Rosedale city (Kans.), 5,960.

Louisville District.—Indiana: New Albany city, 20,629; Jefferson city, 10,412.

Potential Voting Strength of the Nation.—While this summary shows the number of male citizens 21 years of age and over in continental United States, excluding the foreign born who have not become naturalized, it really represents the number of males who from the standpoint of age alone are eligible to vote, aside from any qualifications based upon education, length of residence, or considerations of a like nature imposed by the national or State government. The foreign-born whites are distributed as naturalized, having taken out first papers, alien, or unknown. In 1910 the total number of males of voting age in continental United States was 26,999,151, or 29.4 per cent. of the total population, as compared with 21,134,299, or 27.8 per cent. of the total population in 1900.

The following table shows the distribu-

tion of the male population 21 years of age and over according to its elements, for 1900 and 1910, for continental United States as a whole. For the white population distinction is made between persons of native and foreign birth, respectively; and for the native white a further distinction is made with respect to parentage. Those persons having both parents native are classed as of native parentage; those having one or both parents foreign born are classed as of foreign or mixed parentage. Of the total foreign-born white males of voting age in 1910, 45.7 per cent. are naturalized, 8.6 per cent. have taken out first papers, 34.1 per cent. are alien, and 11.7 per cent. unknown. The equivalent figures for the total foreign born in 1900 are as follows: Naturalized, 58.0 per cent.; first papers taken out, 8.4 per cent.; alien, 18.7 per cent.; and unknown, 14.9 per cent. These figures exclude Alaska, Hawaii, Philippine Islands, Porto Rico, Canal Zone, Guam, Samoan Islands, Wake Island, etc.

PERCENTAGE OF MALE POPULATION BY ELEMENTS.

	1910.	1900.
Continental United States.....	100.0	100.0

UNITED STATES OF AMERICA

General Farm Crops of the United States as a Whole: 1909 and 1899.—The accompanying table summarizes the data collected by the Thirteenth Decennial Census for certain important general farm crops in 1909, including the cereals—corn, wheat, oats, barley, rye, buckwheat, rough rice, emmer and spelt, and kafir corn—the hay and forage crops, potatoes, sweet potatoes and yams, tobacco, and cotton. These crops represented 10 years earlier, according to the census of agriculture for 1899, nearly seven-eighths of the value of all farm crops.

In any comparison of the crop of one year with that of another, acreage forms a more accurate index than either the amount or the value of the crop. The crop yield is subject to variations from year to year, according to the prevalence of adverse or favorable weather conditions, while aggregate values reflect changes in the price per unit as well as in the amount of the crop. On the other hand, in the comparison of one crop with another the respective acreages do not indicate the relative importance so accurately as do aggregate values, since the value of the yield per acre for one crop may be much greater than for another. In this connection it may be noted that the value of the crop per acre by no means indicates the relative profitableness of any particular crop; this could only be estimated in connection with the price of land and with other costs of production, concerning which the census furnishes no information.

In April, 1910, the land in farms in the United States was reported by the census as 878,798,325 acres, of which 478,451,750 acres were improved, and it may be noted that the crops here under consideration,

with an aggregate of 301,325,598 acres, occupied slightly more than one-third of all the land in farms and somewhat more than three-fifths of the farm-land which was improved. The total value of these crops in 1909 amounted to \$4,499,320,000, representing a per capita production of \$48.92.

The most important crops in respect to acreage are corn, hay and forage, wheat, oats, and cotton, in the order named. Barley, which comes next in order, has less than one-fourth the acreage of cotton.

In value the order of the crops is different. Corn stands first, and hay and forage second, followed by cotton, wheat, and oats. The value of the potato crop, which ranks next in importance, is less than two-fifths that of the oat crop.

The table shows also the increase from 1899 to 1909 in the acreage harvested.

During the period covered by the table there has been a substantial increase in the acreage of each of the crops specified. This increase, however, is unevenly distributed. Since 1879 the acreage of hay and forage, tobacco, and cotton has more than doubled, while that of the combined cereals has increased somewhat less than two-thirds. The population of the country increased 83.4 per cent. between 1880 and 1910.

Considered as an aggregate the cereals are, both in acreage and value, the most important of the crops of the United States. In their proportion of the aggregate acreage presented in the table, the cereals are at the present time less important than they were 30 years ago.

The aggregate acreage harvested of the general farm crops as reported in the census years 1909, 1899, 1889, and 1879 is given in the following statement:

GENERAL FARM CROPS, 1879 TO 1909.

UNITED STATES OF AMERICA

Foreign Commerce of the United States, 1911-12.—The foreign commerce of the United States made a new and remarkable record in the fiscal year ended June 30, 1912. The total value of the merchandise entering and leaving the country in its trade with foreign lands and its own island possessions in the fiscal year was \$4,000,000,000; the value of manufactures exported was more than \$1,000,000,000; and the value of non-dutiable merchandise entering the country was \$1,000,000,000. Of this \$1,000,000,000 worth of non-dutiable merchandise entering the country during the year about \$900,000,000 worth was from foreign countries and \$100,000,000 worth from Hawaii and Porto Rico. Of the merchandise coming from foreign countries only (and not including that from Hawaii and Porto Rico), 53.5% entered free of duty, against 44.3% during the entire period of the Dingley law, 48.8% under the Wilson law, and 53% under the McKinley law, when the admission of sugar free of duty made the percentage of duty-free imports unusually large, but not so high as that of the year 1911-12; in fact, the value of duty-free merchandise then entering from foreign countries not only exceeded by far that of any earlier year, but also formed a larger share of the total imports than in any previous years except 1892 and 1894, the opening and closing years of the operations of the McKinley law, when the imports of sugar free of duty were abnormally large. Imports of duty-free merchandise never reached as much as \$100,000,000 prior to 1873. They touched the \$200,000,000 line in 1880, the \$300,000,000 line in 1891, the \$400,000,000 line in 1892, the \$500,000,000 line in 1905, the \$600,000,000 line in 1907, the \$700,000,000 line in 1910, and in 1912 approximated \$900,000,000; and the addition of the merchandise coming from our own islands brought the grand total of non-dutiable merchandise in the fiscal year 1912 up to a round \$1,000,000,000.

The principal articles forming the \$1,000,000,000 worth of duty-free merchandise entering continental United States during the fiscal year 1911-12 were, according to the latest reports of the Bureau of Statistics of the Department of Commerce and Labor, food-stuffs and manufacturers' materials. The food-stuffs entering without payment of duty included about \$120,000,000 worth of coffee, approximately \$35,000,000 worth of tea and cocoa, over \$20,000,000 worth of fruits and nuts, \$5,000,000 worth of spices, and about \$90,000,000 worth of sugar from Porto Rico, Hawaii, and the Philippines. The manufacturers' materials entering free of duty included approximately \$100,000,000 worth of hides and skins; over \$100,000,000 worth of india-rubber and substitutes therefor; about \$65,000,000 worth of raw silk; \$50,000,000 worth of tin in bars, blocks, and pigs; \$45,000,000 worth of copper in ore and pigs; \$30,000,000 worth of fibres, including hemp, jute, and sisal; and about \$20,000,000 worth of raw cotton.

Of the more than \$1,000,000,000 worth of manufactures exported during the year, those of iron and steel aggregated about \$275,000,000 in value; copper and mineral oils each more than \$100,000,000; lumber and other manufactures of wood, nearly \$100,000,000; leather and manufactures thereof, about \$60,000,000; and cotton manufactures, about \$50,000,000. Manufactures exported in the month of May amounted to \$108,000,000 for the single month and formed 63% of the total domestic exports of that month. For the full fiscal year manufactures formed about 46% of the total domestic exports. During the thirty-four months in which the present tariff law had been in operation, manufactures exported averaged \$75,000,000 per month and formed 45% of the total exports. During the entire existence of the Dingley law they averaged \$46,000,000 per month, and formed 37% of the total exports; during the entire operation of the Wilson law exports of manufactures averaged \$22,000,000 per month and formed 29% of the total exports; and during the McKinley law they averaged \$16,000,000 per month and formed 21% of the total exports.

UNITED STATES OF AMERICA

The principal results of the census of agriculture which concern general farm crops for 1909 and 1899 for the United States as a whole are given in the following table:

	ACREAGE.			PRODUCTION.			VALUE.					
	1909.	1899.	Increase. ¹		1909.	1899.	Increase. ¹					
			Amount.	Per cent.			Amount.	Per cent.

CHRONOLOGY

PRE-COLUMBIAN HISTORY

- Buddhist priests visit Fu Sang, supposed to be America 458
- Hui Shen's account of the Buddhist mission referred to in the Chinese annals for 499
- See article HUI SHEN in Volume IV.
- Iceland discovered by Nadodd, a Norse rover 861
- First settlement by Norsemen 875
- Grumbiorn sights a Western land.. 876
- Land discovered by Eric the Red, and named Greenland 982
- Second voyage from Iceland to Greenland by Eric 985
- Bjarni sails from Iceland for Greenland, but is driven south by a storm and sights land at Cape Cod or Nantucket, also at Newfoundland, and returns to Greenland 985
- See article VINLAND in Volume X.
- Voyage of Leif, son of Eric the Red. He sails in one ship with thirty-five men in search of the land seen by Bjarni..1000
- See article VINLAND in Volume X.
- Touching the Labrador coast, stops near Boston, Mass., or farther south, for the winter. He loads his vessel with timber; he returns to Greenland in the spring of 1001
- [He calls the land Vinland, from its grapes.]
- Thorwald, Leif's brother, visits Vinland in 1002, and winters near Mount Hope Bay, R. I. In the spring of 1003 he sent a party of his men to explore the coast, perhaps as far south as Cape May.
- Thorwald explores the coast eastward, and is killed in a skirmish with the natives (skraelings) somewhere near Boston1004
- His companions return to Greenland 1005
- Thorfinn Karlsefne sails with three ships and 160 persons (five of them young married women) from Greenland to establish a colony.....1007
- [Landing in Rhode Island, he remains in Vinland three years, where he has a son, Snorri, ancestor of Albert Thorwaldsen, the Danish sculptor.]
- Icelandic manuscripts mention a bishop in Vinland in 1121, and other voyages there in 1125, 1135 and.....1147
- See article VINLAND in Volume X.
- Madoc, Prince of Wales, according to tradition, sails westward, and reports the discovery of a "pleasant country"..1170
- [The tradition is further that he returns to this Western country with ten ships, but is never heard of again.]
- See article MADOC in Volume VI.
- [The fullest relation of these discoveries is the *Codeæ Flatöiensis*, written 1387-95, now preserved in the royal library at Copenhagen, found in a monastery on the island of Flato, on the western coast of Iceland.]
- Eskimos appear in Greenland.....1349
- Pizigani's map of the Atlantic.1367-73
- Nicolo Zeno, with three ships belonging to Sir Henry Sinclair, Earl of the Orkney Islands, visits Greenland and possibly Vinland1394
- Communication with Greenland ceases about 1400
- Berthancourt settles the Canary Islands 1402
- Madeira Islands rediscovered by the Portuguese1418-20
- [These islands previously discovered by Machan, an Englishman, 1327-78.]
- The "Claudius Clavus" map, giving the earliest delineation of any part of America (Greenland)1427

ERA OF PERMANENT DISCOVERY

- Columbus born1435-36(?) 1445
- Visits England and Iceland prior to 1470
- Columbus in Portugal1470-84
- Marco Polo's travels first printed..1477
- Columbus in Spain. Announces his views to Ferdinand and Isabella..1485-86
- The views of Columbus referred to a

Results at close of the Olympic games at Stockholm show that the American athletes won a sweeping victory, scoring 85 points in track and field events and 128 points in all contests, with James

Thorpe, of the Carlisle Indian School, being proved the greatest all-round athlete of the Olympiad.....July 15, 1912

Herman Rosenthal, about to produce his witnesses as to police oppression, is shot dead by parties who escape in an automobile.....July 16, 1912

The expenses incurred by Columbus for his first voyage of discovery show the same to have been \$7200, equivalent to \$100,000 to-day. Ledger found at Palos. Spain.....July 17, 1912

China asks Professor J. Whipple Jenks, an American citizen, to be financial adviser.....July 17, 1912

Harry K. Thaw, murderer of Stanford White in New York, is again judicially pronounced "still insane" and is re-committed to the Matteawan Asylum for Criminal Insane.....July 26, 1912

Becker is indicted for murder and arrested.....July 29, 1912

President Taft formally notified of his renomination at the White House

Aug. 1, 1912

The National Progressive (Roosevelt) party meets at Chicago.....Aug. 5, 1912

U. S. RELIEF OF FOREIGN COUNTRIES—U. S. SENATE

United States Relief of Foreign Countries. The following is a list of the acts and resolutions of Congress granting relief to the people of foreign countries on account of earthquakes, fire, famine, and other calamities:

1812—The President authorized to expend not to exceed \$50,000 in the purchase of provisions for the relief of citizens of Venezuela who had suffered from an earthquake.

1847—The Secretary of the Navy authorized to place at the disposal of Capt. George C. DeKay of New Jersey the U. S. S. *Macedonian* and *Jamestown* for the purpose of transporting to the famishing poor of Ireland and Scotland such contributions as might be raised for their benefit.

1871—The President authorized to station at New York, Boston, and Philadelphia one or more naval vessels to receive on board for transportation such supplies as might be furnished by the people of the United States for the destitute and suffering people of France and Germany during the Franco-Prussian War.

1880—The Secretary of the Navy authorized to employ any vessel of the navy for the purpose of transporting to the famishing poor of Ireland such contributions as might be made for their relief, or to charter under the authority of the United States a suitable American ship for the same purpose. No definite sum named in appropriation.

1897—The Secretary of the Navy authorized to employ naval or other vessels to convey wheat, corn, flour, and other contributions to the famishing poor of India. This authority was granted in two joint resolutions approved Feb. 19 and April 7, and is an amendment to the resolution of April 7, approved June 1. No definite sum was appropriated.

1898—Officers of the army authorized to give subsistence, medical and quartermaster's supplies, and other aid to destitute inhabitants of Cuba; the President authorized to furnish the Cuban people with arms and military stores and supplies to increase their effective fighting force in the war with Spain.

1899—The sum of \$100,000 appropriated for subsistence supplies to be issued to the inhabitants of Cuba who were

destitute and in imminent danger of perishing.

1902—The sum of \$200,000 appropriated to enable the President to procure and distribute among the suffering and destitute people of the French West Indies provisions, clothing, medicines, and other necessary articles, and to take such other steps as he might deem advisable for the purpose of rescuing and succoring the people who were in peril and threatened with starvation.

1907—The President authorized to use and distribute among the suffering and destitute people of Jamaica such provisions, clothing, medicines, and other necessary articles belonging to the subsistence and other stores of the naval establishment as might be necessary for the purpose of succoring the people who were in peril and threatened with starvation in consequence of the Kingston earthquake and attending conflagration.

1909—The President authorized to procure and distribute among the suffering and destitute people of Italy such provisions, clothing, medicines and other articles as he might deem advisable for the purpose of rescuing and succoring the people who were in peril and threatened with starvation in consequence of the earthquake in Sicily and Calabria. The sum of \$800,000 was appropriated for that purpose.

1911—Congress authorized the Secretary of War to contribute transport service not to exceed \$50,000 in cost for the conveyance of food to the Chinese famine sufferers.

United States Sanitary Commission.
See SANITARY COMMISSION, THE UNITED STATES.

United States Senate, the higher branch of the Congress; composed of two Senators from each State, irrespective of the population therein, who are elected by the State legislatures. Some of the most important functions of the Senate, as distinct from the House, are the supervision of the Presidential appointments of the highest grade of public officers, the passing of judgment on all treaties contracted with foreign powers, and the sole power to try all impeachments. In the latter case impeachment proceedings must originate in the House, which presents

U. S. SIGNAL SERVICE—U. S. STEEL CORPORATION

the charges to the Senate, which, in turn, acts as the court. The Vice-President of the United States is president of the Senate, but has no vote therein excepting in the case of a tie, and is really an officer with very limited power. It is customary, after the Vice-President has been installed as presiding officer of the Senate, for him to preside over a few sessions of that body and then ask for a leave of absence, when the Senate elects one of its own members as president *pro tem.*, and the member so chosen acts as presiding officer whenever the Vice-President does not wish to exercise that privilege. In the Sixty-second Congress (March 4, 1911—March 4, 1913) there are ninety-two Senators, of whom fifty are Republicans and forty-two Democrats. The salary of a Senator is \$7,500 per annum, and twenty cents per mile for travelling to and from Washington. See CONGRESS (National); DIRECT ELECTION OF SENATORS; SENATE, UNITED STATES.

United States Signal Service. See SIGNAL CORPS.

United States Steel Corporation. This great combination of steel interests was chartered under the laws of New Jersey Feb. 25, 1901. Its total capitalization then was \$1,402,000,000 (including bonds). It was strictly a "holding company"—that is, it did not mine, manufacture, transport, or sell; it simply owned the stock of its constituent companies.

The concerns acquired were as follows:

Acquired in 1901—Carnegie Company of New Jersey, Federal Steel Company, National Steel Company, American Steel and Wire Company, American Sheet Steel Company, American Tin Plate Company, American Steel Hoop Company, American Bridge Company, National Tube Company, Bessemer Steamship Company, Shelby Steel Tube Company, and Lake Superior Consolidated Iron Mines.

Acquired in 1902—Union Steel Company.

Acquired in 1904—Clairton Steel Company.

Acquired in 1907—Tennessee Coal, Iron, and Railroad Company.

Of the \$1,402,000,000 capitalization, \$510,000,000 was in preferred stock, \$508,000,000 in common stock, \$303,000,000

of corporation bonds, and \$81,000,000 of underlying and miscellaneous obligations—a total of more than \$1,402,000,000. The commission to the Morgan Underwriting Syndicate, according to United States Commissioner of Corporations Herbert Knox Smith, was \$62,500,000 in cash.

The Steel Corporation, according to Smith, showed a total investment in tangible property on Dec. 31, 1910, of \$1,187,000,000, as against outstanding securities of \$1,468,000,000—with \$281,000,000 worth of "water" in the stock. On the outstanding obligation, however, the corporation was earning twelve per cent., according to Smith's figures. In 1901, according to Smith, the tangible property was worth only \$682,000,000, against obligations of \$1,400,000,000—showing \$718,000,000 "watered" stock. In ten years more than \$425,000,000 had been added to the tangible valuation of the corporation.

That the United States Steel Corporation did not control all of the steel business of the country, however, was admitted by the commissioner, who appended the following table, showing how much of the industry was handled by the corporation and how much by the independent companies in 1910:

	Steel Corporation's Percentage.	Independent Companies' Percentage.
Pig iron, spiegel, and ferro..	43.4	56.6
Steel ingots and castings...	54.3	45.7
Rails	58.9	45.7
Structural shapes	47.0	53.0
Plates and sheets of all kinds	49.7	50.3
Black plate produced in tin-mills	52.9	47.1
Coated tin-mill products....	61.1	38.9
Black and coated sheets from tin-mills	38.9	61.1
Wire rods	67.3	32.7
Wire nails	55.5	44.5
Wrought pipe and tubes....	38.2	61.8
Seamless tubes	55.3	44.7

According to the corporation's schedule for the payment of dividends on the common and preferred stock for the first quarter of 1912, no less than \$114,840,800 of its common stock was held in various parts of Europe and in other foreign countries, while the preferred stock held abroad amounted to \$29,941,500. The

UNITED STATES SUPREME COURT—UNIVERSITY EDUCATION

holdings of common and preferred stock in each of these foreign countries are shown below:

	Common.	Preferred.
Africa	\$100	\$6,500
Algiers	19,000	2,000

United Workmen, ANCIENT ORDER OF, a fraternal and benevolent organization; founded in 1868; reported in 1910: Grand-lodges, 22, sub-lodges, 1,970; members, 110,086; benefits disbursed since organization, \$172,310,959; benefits disbursed last fiscal year, \$3,322,283; master workman, Will M. Narvis, Muscatine, Iowa; recorder, M. W. Sackett, Meadowville, Pa.; receiver, Edwin F. Danforth, Skowhegan, Me.

Universal Brotherhood. See THEOSOPHY.

Universalists. According to a special report of the federal Bureau of the Census on *Religious Bodies* (1910), the Universalist denomination had 846 organizations, distributed in thirty-eight States and the District of Columbia; 64,158 communicants or members; 776 church edifices and 33 halls used for church purposes; church property valued at \$10,575,656; 724 ministers; and 600 Sunday-schools, with 6,585 officers and teachers and 42,201 scholars.

UNIVERSITY AND COLLEGE EDUCATION IN THE UNITED STATES

University and College Education in the United States, THE TREND OF. The following monograph upon the history and present status of the University development in the United States was prepared by President William R. Harper of the University of Chicago:

Purpose and Definition.—Many striking changes have taken place in the educational and religious worlds during the past quarter of a century. It is impossible to separate the history of education in America from the history of the Church. Changes in one have affected the other.

The purpose of this statement is not to present statistics with reference to particular institutions, but to make an effort

within brief space to show how certain great factors have been worked out, together with the results of this working. The term "university" has many usages in this country. In the proper sense of the word it designates not a college or institution doing college work, nor an institution made up of a college and of professional schools in which the latter are of the same grade as the college. A college of arts and a college of medicine are to be treated as of the same grade, provided the students in the two institutions are of the same degree of maturity and preparation. The term "university" is rather to be used of institutions in which work of a more advanced character than that done in college is offered to students;

UNIVERSITY AND COLLEGE EDUCATION IN THE UNITED STATES

in which, moreover, emphasis is placed upon research and the training of students for research. In this last and highest sense, the term is properly applied to an institution which has only a single faculty of instruction and a comparatively small number of students. The only question in a given case is this: Is the institution intended as a training school for the development of character, or are the students of the institution those who have had no previous college training? In either of these cases the institution cannot be called a university in the largest and best sense of the word. It is unnecessary at this point to indicate the line which separates the college from the university. From my own point of view, I would draw such a line at the end of the sophomore year in college work. There is something to be said on both sides of this question, but it is a question which need not here be discussed.

What makes a University?—Two things combine to make possible the existence of a university. The first is opportunity for research and investigation; the second is freedom to enjoy this opportunity. Either without the other is, of course, of little value. Among the elements which go to make the opportunity for investigation are the factors connected with (1) libraries and laboratories; (2) preliminary training of a satisfactory character; (3) flexibility in the constitution of the immediate environment; (4) a sufficient number of students possessed of the proper spirit of inquiry. Other factors might be included, but these are the most fundamental.

Freedom to enjoy the opportunities for research is dependent largely upon the organization of the institution. If it were possible to trace the history of the birth of the university, and to examine closely the inherent characteristics of which it was possessed at the time of birth, three things would be noted: (1) the right to govern itself; (2) freedom from control of State or Church; (3) the right of free utterance. Without these characteristics in an institution of learning, whatever may be its name, it cannot

be a university. All universities are of necessity "privileged," and in one form or another supported by the people. It is natural that universities should be influenced by the changes which are going on among the people. But when for any reason the administration of a university, or the instruction in any one of its departments, is changed by an influence from without; whenever an effort is made to dislodge an officer or a professor because the political or theological sentiment of the majority has undergone a change, at that moment the institution has ceased to be a university, and it cannot again take its place in the rank of universities so long as there continues to exist, to any appreciable extent, the factor of coercion. Neither State nor Church nor private patron has any right to interfere with the search for truth, or with its promulgation when found. With schools and colleges organized for the training of youthful minds it is entirely different; and here, if nowhere else, may be drawn sharply the line of differentiation between college and university. An institution under State control almost inevitably withholds freedom of research in certain subjects; an institution under Church control in certain other subjects; while, indeed, an institution under the control of a board of trustees and upon private foundation is not infrequently limited by the prejudices of the trustees.

A good definition for a university is the following: "A self-governing association of men for the purpose of study; an institution privileged by the State for the guidance of the people; an agency recognized by the people for solving the problems of civilization which present themselves in the development of civilization." A university touches every phase of life at every point; it enters into every field of thought to which the human mind addresses itself. It has no fixed abode far away from man, for it goes to those who cannot go to it. It is shut in behind no lofty battlement, for it has no enemy which it would ward off. Strangely enough, it vanquishes its enemies by inviting them into close association with itself. The university is a democratic institution, constituted by the people and for the people.

* See article by the writer on *The University and Democracy*, the *Cosmopolitan*, April, 1899.

UNIVERSITY AND COLLEGE EDUCATION IN THE UNITED STATES

University Education in the Past.—University education, in the sense defined above, has come into existence very largely since the War of the Rebellion. A university could hardly be said to have existed in this country before 1870. Let us consider briefly the situation as it presented itself:

1. In even the largest institutions, the library was scarcely of sufficient size or value to deserve the name. It was open for consultation during perhaps one hour a day of two days in the week. The better class of students, it was understood, had no time for reading. In fact, reading was a degradation. William Frederick Poole, the late librarian of the Newberry Library, a few months before his death made this statement: "To those of us who graduated thirty or forty or more years ago, books outside of the text-book used had no part in our education; they were never quoted, recommended, nor mentioned by the instructor in the class-room. As I remember it, Yale College library might as well have been in Waterville or Bridgeport as in New Haven, so far as the students in those days were concerned." It is only in comparatively recent years that the largest institutions have had a librarian giving his entire time to the care of the library. And the laboratory occupied as small a place in the situation of forty years ago as did the library. It was something unknown to a college graduate of thirty years ago. The first chemical laboratory in Germany was built by Liebig at Giessen in 1826. This factor, which to-day takes its place side by side with the library, is something which formed no part of education in days past. An institution of higher learning with no library worth mentioning, and with no laboratories, could scarcely be called a university.

2. The curriculum of study in those days dealt wholly with the past. It was largely Latin, Greek, mathematics, and philosophy. Questions of living interest could gain no recognition. The study of English literature, and indeed of modern literature of any kind, was rigidly excluded until within two or three decades. The attention of the students was directed to the past. The method employed was in large measure the *a*

priori method. As Professor Remsen has described it:*

"When the philosopher in those days wished to solve a problem, his method was to sit down and think about it. He relied upon the working of his brain to frame a theory, and beautiful theories were undoubtedly formed. Many of these—probably all of those which had reference to natural phenomena—were far in advance of facts known, and even directly opposed to facts discovered later. Minds were not hampered by facts, and theories grew apace. The age was one of mental operations. A beautiful thought was regarded as something much superior to knowledge. We have not learned to think less of beautiful thoughts, or of mental processes, but we have learned to think more of facts, and to let our beautiful thoughts be guided by them."

3. Still further, the curriculum was not one of high standard, from the present point of view. It is probably a correct statement that the curriculum of Yale and Harvard sixty years ago was not much higher than the curriculum of the best grade of high schools to-day. It certainly was not as broad in the opportunities furnished for diversity of work. As late as the year 1843 the requirements for admission to the freshman class were as follows:

In Latin: Cicero's orations, Virgil, Sallust, Latin grammar and Latin prose, and Latin prosody. In Greek: Greek grammar and the reading of three books of the *Anabasis*. And in addition, arithmetic, English grammar, and geography.

Still later, at Harvard, 1850:

In Latin: Cæsar, Virgil, Cicero's select orations, with Latin grammar and prose. In Greek: Felton's Greek reader, "writing of Greek with the accents," Greek grammar. In mathematics: arithmetic, algebra, first lessons; introduction to geometry. Worcester's ancient geography and history.

4. The numbers in attendance were very small. A single case may be cited: In 1834 Harvard had 336 students in all departments; in 1840, 448 students; in 1850, 584 students; and in 1866-67, 959 students. No institution of learning up

* Address at the opening of Kent Chemical Laboratory, January, 1893.

UNIVERSITY AND COLLEGE EDUCATION IN THE UNITED STATES

to the time of the close of the war had as large a number as 1,000 students. During Harvard's first sixty-five years of history there was graduated an average of eight students a year. During Yale's first 128 years, an average of between thirty-four and thirty-five students graduated each year. There was no such thing as a large college; the university was something not yet dreamed of.

5. The constituency of the college in those days was to a large extent students who were preparing themselves for the ministry. The college was practically a theological seminary. In Harvard, Hebrew was required of all students down to 1780. Those subjects which have found their way into the curriculum in more recent years, because demanded by men having in mind the profession of medicine or the profession of the law, or a business career, were entirely lacking. The percentage of graduates entering the ministry was as follows: At Yale, one student in every four graduated from 1702 to 1830 became a minister. At Harvard, during the first fifty years, one out of every two entered the ministry.

In a word, therefore, higher education in the past was intended largely for a single class of men. The numbers were consequently very small; and in the training of these men the entire emphasis was placed upon that which stood related to ancient times, rather than upon anything that concerned the times in which the men lived; and besides, those methods of work which to-day constitute the very essence of higher education, employed in connection with the library and the laboratory, our fathers utterly lacked.

In reference to the control of higher education in this early stage of its development, the following points deserve consideration:

1. Nearly all the institutions of higher learning were established by denominations. Harvard came first, in 1636, established by the Congregationalists. In 1693 the college of William and Mary was founded by the Church of England in the colony of Virginia. Yale followed in 1701, under the Congregationalists. Then in 1746 the Presbyterians established Princeton College, and this was followed in quick succession by Washington and

Lee University in 1749, under the Church of England; the university of Pennsylvania in 1740; Columbia University in 1754, under the Church of England; Brown University in 1764, in charge of the Baptists; Rutgers College in 1766, under the Dutch Reformed Church; Dartmouth College in 1770, by the Congregationalists; and Hampden-Sidney College in 1776, under the Presbyterians. It was not until long after this that the State universities were established. In the earlier times, when Church and State were one in the colonies, the State may have had to do with the maintenance of the college; but State foundations, in the realm of higher education, have come for the most part since 1800. Of the more prominent State universities, the following are the dates of establishment:

Pennsylvania*..	1740	Iowa	1847
Georgia	1785	Wisconsin	1848
Vermont	1791	Cornell	1868
Tennessee	1794	Colorado	1863
North Carolina.	1795	Illinois	1863
Indiana	1820	Minnesota	1863
Virginia	1825	Nebraska	1869
Michigan	1837	Texas	1883
Missouri	1840		

Higher education, until times comparatively recent, therefore, was the child of the Church, and in each particular case the special offspring of a denomination. It has been in accordance with this policy that everywhere throughout the Middle and Western States the different denominations of Christians have sought to strengthen their work by establishing colleges, the absolute control of which they have maintained. The debt of education to the several Christian denominations is something incalculable. It may almost be said that down to 1830 or 1840 there was no higher education except that which was provided for by the denominations.

2. In this period, likewise, the officers and the students of the college were very largely members of the particular denomination which controlled the college. This was a natural consequence of the fact that the majority of the students were preparing for the ministry. Just as to-day the staff of the theological seminary must be composed of those who are communicants of the particular denomination in control of the seminary, so in those

* Not strictly a State university.

UNIVERSITY AND COLLEGE EDUCATION IN THE UNITED STATES

days the staff of the college consisted exclusively of those who were members of the particular denomination in control of the college.

In many of the smaller institutions under denominational control this condition still exists, while in the larger institutions a survival of it is seen in such a charter as that of Yale, which requires a large proportion of the corporation to be Congregational clergymen of the State of Connecticut.

3. But it is to be noted that denominations in those days were what we would to-day call sects. Inasmuch as the distinctions between the denominations were more clearly marked and greater emphasis was placed relatively upon these distinctions, and since the spirit of those days was narrow as compared with that which frequently permits to-day the co-operation of different denominations in the same great work, the denominationalism of that time may fairly be called "an undue denominationalism"—that is, sectarianism. From the point of view in which these words are used, the difference between the spirit of sectarianism and the spirit of the denominationalism of to-day is something world-wide. In those times there had not yet sprung up these great modern movements like the Young Men's Christian Association and the Young People's Society of Christian Endeavor, which have contributed so largely to broadening out the denominations and to placing emphasis upon the essentials of Christianity as distinct from the peculiarities of sects. Under these circumstances, the lines were drawn as strictly between the *colleges* of the several denominations as between the denominations themselves.

4. As a result of this narrow and sectarian control, and of the fact that the largest single factor in the student body was made up of those engaged in preparation for the ministry, there was a unity of plan and purpose, and a unity in teaching, which is to-day unknown in institutions of higher learning. Only that might be taught which was in strict accord with the tenets of the sect or denomination in control, and only that side of truth was presented which it was desired the student should accept. To have

placed before the student three or four points of view and to have allowed him to make choice for himself would have been regarded as a method of policy wholly disastrous in its effects. There was no choice of subject; there was no choice of opinion. The curriculum was a cast-iron curriculum, and the whole process consisted of a series of mechanical contrivances devised to make every student exactly like every other student, in order that each and every one might seem to have passed through the same mould, with each individual characteristic cut off. Space does not permit me to show the direct results of this kind of higher education. It is enough to say that it was characteristic of its times. The exclusive spirit still prevailed. In many sections of the country men were monarchists or aristocrats without knowing the fact. The principles of democracy had not yet exerted their full influence. The times were not yet ripe for the full fruition in the educational field of democratic methods and democratic ideals. George Eliot's description in *Middlemarch* of certain English institutions would have been strictly applicable to these, for they were "institutions which sought to lift up the higher learning by making it exclusive."

New Factors in the Present Situation.—If, within fifty years, there have been changes in our industrial world; if, with the coming of the railroad and the telegraph-line methods of transportation have been revolutionized; if everywhere growth and development, which are only other words for expansion, have been phenomenal, just so has it been in the field of higher education. The changes have been so great that one may hardly speak of evolution. It might almost be called revolution. Higher education, as it stands in relationship to the different denominations of the Church, finds itself to-day engaged in a serious struggle for the solution of the problems which arise out of this new and strange environment; and we should remember that these changes owe their origin to the same cause as do the changes in methods of transportation, business in general, and life at large.

The high school, called the people's college, is a development of the last twenty or twenty-five years. Much work done for-

UNIVERSITY AND COLLEGE EDUCATION IN THE UNITED STATES

merly by colleges is now done by high schools; the course of study in many of these schools is more extensive and more thorough than was the course in many of the better colleges forty years ago, and many of the poorer colleges to-day. The educational policy involved in the maintenance and conduct of the high school is something very pleasing to the public, and everything points to a still higher development; for already in many States the high school is doing the work of the freshman year in college. Several things are to be considered:*

1. Much of the constituency of these schools is drawn directly from the college or the preparatory school connected with the college.

2. The graduates of these schools have distinct advantages in any effort to secure positions as teachers in the lower schools.

3. So strong is the work done in the high school that many parents who have the means to pay the tuition fee in a denominational institution prefer the high school; while the absence of any fee is a great incentive to many to patronize them.

4. The equipment for science is often far better than that possessed by the college, and the instruction is more modern.

5. Preparatory schools in the West and South are no longer crowded, because students are going to the high schools.

6. In a word, the high school is a distracting element to the friends of the college, which at one time controlled the situation.

Another factor of great importance is the development, especially in the Western States, of the State university. At first only a college, the State university has slowly gained ground, until in some States it has become almost impossible for the non-State colleges to continue their work with satisfaction. So strong has the antagonism come to be that in more than one State the smaller colleges have joined themselves together in an alliance the object of which is to meet the rapid encroachments of the State institution. In the whole Mississippi Valley there are not more than two or three non-State institutions which to-day do not stand in actual fear of the State institutions.

The explanation of this is clear. With a political influence which naturally lends itself to the State institution; with the large number of alumni occupying the chief positions as principals and teachers in high schools; with no tuition fee, because provision has been made by the State, and instruction is offered free; with excellent facilities for work in nearly every line; with fully equipped laboratories, and with libraries far more complete than any ordinary college can ever hope to possess, the State university presents an inducement to the prospective student which the smaller college cannot under any circumstances duplicate.

The introduction of the library and the laboratory into modern education presents other difficulties. These may be summed up in one word—lack of means. The work of the junior and senior years at college cannot in these days be properly done without large libraries and well-equipped laboratories. The modern method of teaching and of study rests absolutely upon principles which demand for their operation books and apparatus.

The introduction of the principle of election, which has now been universally adopted in so far as the financial resources of institutions make it possible, is a source of many changes and much embarrassment. The student-world is now least of all concerned in preparation for the ministry. The average class of even the smaller college turns out more men for medicine and law than for the ministry; while even a larger number, perhaps, of those who leave the college enter business. These, having in mind the careers which they are to follow, demand studies which shall bear directly on that career. Educators, for the most part, accept the doctrine that any ordinary subject, well studied, will produce discipline and furnish culture. Students wish modern literature, rather than ancient literature; modern history, rather than ancient history. They wish political economy and political science, and sociology, instead of philosophy. Many prefer French and German to Latin and Greek. So many subjects are demanded, libraries of such extent are needed, laboratories with such equipment are called for, that to-day \$1,000,000 will not suffice to meet the

UNIVERSITY AND COLLEGE EDUCATION IN THE UNITED STATES

wants of an institution of higher learning which, twenty years ago, would have been amply provided for by \$100,000. The elective principle, which calls for large expenditure not only in the way of books and equipment, but also of increased instruction, is the rock on which many institutions are being dashed to pieces.

Added to this, there has come into existence, gradually but surely, what is called the university idea. As has been said, a university, in the proper sense of the term, was something which did not exist in the United States before the war. It might be said that this idea goes no farther back than three decades. All institutions before that time, and many of the larger institutions of to-day, are large colleges, but not universities.

In 1900, in the city of Chicago, was organized an association of American universities. The association includes fourteen of the 480 colleges of the United States—one in thirty-four. In some of these institutions are gathered students the total number of whom would make thirty or forty colleges. This university spirit has now taken root and its most rapid development may be expected; for the same spirit which has drawn so large a portion of our population to the cities, where special advantages are thought to exist and special privileges may be secured, is drawing the best men to the larger institutions (State universities and institutions only nominally under denominational control) because of their larger libraries, their better equipped laboratories, and their more direct contact with life and modern civilization. This element in the present situation is one which the denominational college is compelled to face, and with which it has already entered into serious struggle.

The older institutions of higher education, the denominational colleges, are, therefore, confronted to-day by many changes from the earlier situation in which these colleges had birth and the first years of their growth. The difficulties which thus present themselves are many, and among them not the least is the greatly increased cost of maintenance. The number of denominational colleges with an endowment of less than \$100,000 is very large. These, for the most part,

have less than 100 to 150 college students. The total income from all sources of more than one-third of all the colleges and universities in the United States is in each case less than \$10,000. The cost per capita for high-school instruction in a city like Peoria, Ill., is larger than the cost per capita of instruction furnished in many of the colleges. The demands of modern methods have multiplied the cost of education many times, and at the same time the income on investments is steadily decreasing.

The denominations recognize the fact that, as such, they lack the means necessary to make provision for the work of higher education in the largest sense. No denomination, as such, has yet established and endowed an institution which has the rank of university. The denomination can provide for a college. It is not strong enough, and there is not sufficient interest, to secure means for the maintenance of a university. Universities on large foundations have come as a result, on one hand, of generous gifts from men of many denominations, including gifts from those who have had no denominational connection. (In this class will be placed Harvard, Yale, and Chicago.) Or by individual men, either out of touch with Christian work altogether, or without reference to it. (Here are to be placed Girard College and the Leland Stanford University.) Or by the collective strength of a State. (Here belong the State universities, especially of the Middle and Western States.)

A denomination, as such, cannot to-day furnish the faculty for a university. It would be literally impossible for even the strongest denomination in the United States to man a strong university. It would be difficult for any three denominations combined to do this. If such a university were organized and if its faculty were in large measure of a particular denomination, it would be still more difficult for that denomination to impress its particular doctrines upon the university. A denomination may establish a college, and, if it is a small college, may furnish the membership of its faculty. It may likewise furnish a large majority of the student body; and it might, although this is improbable, make a strenuous ef-

UNIVERSITY EXTENSION—UPJOHN

fort to propagate through this institution its peculiar views. But to attempt this in the case of a university would be futile, and no body of men likely to be placed as trustees in control of a university, even if as individuals a majority of them are members of the same communion, will to-day, or in the future, make an effort to impress upon that institution a denominational point of view.

This, then, is the present—with, on the one hand, many new educational problems difficult of solution, and, on the other, a changed relationship between denominationalism and higher education. If the past was the period of denominational higher education, what shall we call the present?

In the field of activity, as in that of theological thought, and as in that of business, it is a period of transition; *transition* from a lower to a higher plane; from a narrower to a broader spirit; from a smaller to a larger work; a transition in process because we are now coming into a fuller knowledge, and understand the significance of the teachings of the great Teacher, Jesus Christ; because we are really just beginning to apply the principles of democracy to our religion and educational work; because the new century places before us possibilities of increase, of readjustment, and of realization even beyond our dreams. See COLLEGES IN THE UNITED STATES.

University Extension. The American Society for the Extension of University Teaching was founded at Philadelphia in June, 1890, and incorporated in March, 1892. The aim of university extension is: first, to extend higher education to all classes of people; second, to extend education through the whole of adult life; third, to extend thorough methods of study to subjects of every-day interest.

From Philadelphia the movement has extended into many sections of the country, being established mainly, however, in connection with colleges and universities.

University Settlements. See COLLEGE SETTLEMENTS.

Upchurch, JOHN JORDEN, mechanic; born in Franklin county, N. C., March 26, 1822; received a common-school education. In 1868, while working in the Atlantic and

Great Western Railroad shops at Meadville, Pa., he drafted the first ritual and organized with fourteen members the first lodge of the Ancient Order of United Workmen. The first meeting was held Oct. 27, 1868, since which time the order has spread to every State and Territory and in 1900 numbered over 400,000 members. He died at Steelville, Mo., Jan. 18, 1887.

Udike, WILKINS, lawyer; born in Kingston, R. I., Jan. 8, 1784; admitted to the bar; was a member of the State legislature for many years; and author of *Memoirs of the Rhode Island Bar*; *History of the Episcopal Church in Narragansett Pier, R. I.*, etc. He died in Kingston, R. I., Jan. 14, 1867.

Upham, CHARLES WENTWORTH, author; born in St. John, New Brunswick, Canada, May 4, 1802; graduated at Harvard College in 1821, and at its Divinity School in 1824; left the ministry on account of bronchial trouble in 1844; was president of the Massachusetts senate in 1857-58; and member of Congress in 1853-55. His publications include *Lectures on Witchcraft, Comprising a History of the Salem Delusion, 1692*; *Life of John C. Frémont*; *Memoir of Francis Peabody*; *Salem Witchcraft and Cotton Mather, a Reply*; *Life of Sir Henry Vane*, etc. He died in Salem, Mass., June 14, 1875.

Upham, WARREN, geologist; born in Amherst, N. H., March 8, 1850; graduated at Dartmouth College in 1871; served on the geological survey of Minnesota in 1879-85, and on the United States geological survey in 1885-95. He then became secretary and librarian of the Minnesota Historical Society in St. Paul. His publications include *The Glacial Lake Agassiz*; *Greenland Ice-fields*; *and Life in the North Atlantic, with a New Discussion of the Causes of the Ice Age* (with Prof. G. F. Wright); *Minnesota in Three Centuries*, etc.; editor *Collected Papers, Minnesota Historical Society*, and contributor there to papers on *Groswont Point*; *and Radisson, the First White Men in Minnesota*, and *Progress of Discovery of the Mississippi River*, etc.

Upjohn, RICHARD, architect; born in Shaftesbury, England, Jan. 22, 1802. Removed to New York in 1839 to direct alterations in Trinity Church, but these

UPSHUR—USHER

were abandoned on a proposal being entertained for the erection of a new edifice. He drew the plans for this edifice, which was completed in 1846 and was then considered the handsomest church structure in conception and detail in the United States. He died in Garrison's, N. Y., Aug. 16, 1878.

Upshur, ABEL PARKER, statesman; born in Northampton county, Va., June 17, 1790; admitted to the bar in 1810; practised in Richmond, Va., in 1810-24; judge of the General Court of Virginia in 1829-41; Secretary of the Navy in 1841-43. In the latter year he succeeded Daniel Webster as Secretary of State. He published *Brief Inquiry into the True Nature and Character of our Federal Government*; *Review of Judge Joseph Story's Commentaries on the Constitution*. He was killed with several others on the Potomac River, near Washington, by the explosion of a large wrought-iron gun on the United States steamer *Princeton*, the discharge of which he was witnessing, Feb. 28, 1844.

Upshur, JOHN HENRY, naval officer; born in Northampton county, Va., Dec. 5, 1823; graduated at Annapolis in 1848; served in Mexican and Civil wars; promoted rear-admiral and retired in 1885, upon his own application, after more than forty years' service.

Upson, ANSON JUDD, educator; born in Philadelphia, Pa., Nov. 7, 1823; graduated at Hamilton College in 1843; professor of rhetoric at Hamilton College in 1853-70; ordained in the Presbyterian Church in 1868; professor of sacred rhetoric at Auburn Theological Seminary in 1880-87; appointed chancellor of the University of New York in 1892. He died in Glens Falls, N. Y., June 15, 1902.

Upton, EMORY, military officer; born in Batavia, N. Y., Aug. 27, 1839; graduated at West Point in 1861, and was assigned to the artillery. He became aide to General Tyler, and was wounded in the battle of Bull Run. In the Peninsular campaign he commanded a battery, and was active in the battles of South Mountain, Antietam, Fredericksburg, Chancellorsville, and Gettysburg. In the campaign against Richmond (1864) he commanded a brigade until assigned to the army under Sheridan in the Shenan-

doah Valley, where he was wounded in the battle of Winchester. Early in 1865 he commanded a division of cavalry in General Wilson's operations in Alabama and Georgia, and was distinguished in the capture of Selma. In March, 1865, he was brevetted major-general, United States army, for "meritorious services during the Rebellion." He was the author of *Infantry Tactics for the United States Army*, adopted in 1867. He died in San Francisco, Cal., March 14, 1881.

Urdaneta, ADRES, navigator; born in Villafranca, Guipuzcoa, Spain, in 1499. Urged by the council of the Indies, Philip II. decided, in 1558, to undertake the conquest of the Philippine Islands, and appointed Urdaneta chief pilot of the expedition, which left Acapulco Nov. 21, 1564, under Miguel Lopez de Legaspi. The latter took possession of the island of Cebu and conquered Mindoro. Urdaneta returned to Mexico, where he died June 3, 1568. He wrote several memoirs and letters, which are preserved in the archives of the Indies in Seville.

Usher, HEZEKIAH, patriot; born in England about 1615; established himself in Boston in 1646; was agent for the Society for Propagating the Gospel; purchased the press and type for printing Eliot's Indian Bible in 1657; and was one of the founders of the Old South Church in 1669. He died in Boston, Mass., March 14, 1676.

Usher, HEZEKIAH, patriot; born in Cambridge, Mass., June 6, 1639; son of the preceding; engaged in business in Boston. During the witchcraft excitement he was arrested but allowed to escape. He died in Boston, Mass., July 11, 1679.

Usher, JOHN, colonial executive; born in Boston, Mass., April 27, 1648; son of Hezekiah 1st; succeeded his father in business; was colonel of militia; treasurer of Massachusetts; agent in London for the Massachusetts colony for the purchase from Sir Ferdinando Gorges of the title for the district of Maine; and lieutenant-governor of New Hampshire in 1692-97, and from 1702 till his death, in Medford, Mass., Sept. 1, 1726.

Usher, JOHN PALMER, statesman; born in Brookfield, N. Y., Jan. 9, 1816; settled in Indiana, where he studied law and

UTAH

practised; elected to the legislature and later was attorney-general. On March 20, 1862, he was made first assistant Secretary of the Interior, and on Jan. 8, 1863, succeeded to the post of Secretary of the

Interior, which he resigned May 15, 1865; then resumed private practice and was made consulting attorney of the Union Pacific Railroad. He died in Philadelphia, Pa., April 13, 1889.

UTAH

Utah (named from the Ute Indian tribe, meaning unknown), a State in the Mountain Division of the North American Union; bounded on the n. by Idaho, n. e. by Wyoming, e. by Colorado, s. by Arizona, and w. by Nevada; area, 84,990 square miles, of which 2,806 are water surface; extreme breadth, e. to w., 275 miles; extreme length, n. to s., 345 miles; number of counties, 27; capital, Salt Lake City; State flower, the sego lily; State motto, "Industry"; organized as a Territory, Sept. 9, 1850; admitted into the Union as the forty-fifth State, Jan. 4, 1896. Pop. (1910), 373,351.

General Statistics.—Utah in recent years has shown a promising advance in

\$13,219,000; wage-earners, from 5,413; salaries and wages, from \$3,263,000; cost of materials, from \$11,440,000; and value of products, from \$17,981,648. The principal outputs are flour and grist, steam railroad cars, books and periodicals, confectionery, and butter, cheese, and condensed milk.

There are over 21,670 farms, comprising 1,368,211 improved acres, and representing in value of farm lands over \$99,482,000, an increase in ten years of 147 per cent. Irrigation projects completed and under construction at the end of 1910 served nearly 2,000,000 acres, and cost about \$13,845,000. Ordinary farm crops have a value of \$19,000,000, the most important being hay and forage (\$10,260,000), and spring and winter wheat (\$4,436,000). Domestic animals, poultry, and bees have a value of over \$28,720,000, an increase in ten years of over 33 per cent. Horses, cattle, and sheep leading. The wool industry is represented by 2,100,000 sheep of shearing age, yielding 4,819,500 pounds of scoured wool, valued at \$506,000.

General business interests are served by twenty-one national banks, having \$780,000 capital and resources of \$26,391,744; sixty-eight State banks, with \$4,302,240 capital and \$33,275,582 resources; and four stock savings banks, with \$41,000 capital and \$9,920,095 resources. Transactions at the clearing-house at Salt Lake City have exceeded \$334,095,000 in a single year.

Religious interests are promoted by 50 organizations, having 516 church edifices, 172,814 communicants or members, 8,887 Sunday-school scholars, and church property valued at \$3,612,422, the strongest denominations numerically being the Church of Jesus Christ of Latter-day Saints, Roman Catholic, Greek Orthodox, Presbyterian, Methodist Episcopal, and Congregational. The Roman Catholic a

her mineral, manufacturing, agricultural, and live-stock interests. The record year in mineral productions (1907) had a total output valued at \$38,099,756, of which copper represented \$13,283,674; silver, \$7,528,500; lead, \$6,540,094; gold, \$5,121,600; and coal, \$2,959,769. Manufacturing industries had 749 factory-system establishments, employing \$52,627,000 capital and 11,785 wage-earners; paying \$10,376,000 for salaries and wages, and \$41,292,000 for materials; and yielding products valued at \$61,989,000. These figures show an increase in ten years in capital from

Protestant Episcopal Churches have each a bishop at Salt Lake City.

The school age is 6-18; enrolment in the public schools, 86,904; average daily attendance, 67,984; value of public-school property, \$5,902,801; expenditure for all public-school purposes, \$2,832,273. For higher education there are the University of Utah, with colleges of law and medicine, at Salt Lake City; the Agricultural College of Utah, at Logan; twenty-nine public high schools; and a State school for the blind and deaf at Ogden.

Government.—Utah, as Territory and State, has had seven constitutional conventions. The first constitution, framed for the State of Deseret, was tabled in the United States Senate in 1858; another was ratified by popular vote in 1862; and the last, with a clause extending suffrage to women, was similarly adopted in 1895. A considerable part of legislation affecting the people of the State was enacted by the Congress under its anti-polygamy measures.

The executive authority is vested in a governor (annual salary, \$4,000), secretary of state, treasurer, auditor, attorney-general, adjutant-general, superintendent of education, and commissioner of insurance—official terms, four years. The legislature consists of a senate of eighteen members and a house of representatives of forty-five members—terms of senators, four years; of representatives, two years; salary of each, \$4 per diem; sessions, biennial; limit, sixty days. The chief judicial authority is a Supreme Court, comprising a chief-justice and two associate justices. In 1910 the total bonded debt was \$900,000; cash in the treasury, \$616,632; assessed valuations, \$186,354,505; tax rate, \$5 per \$1,000.

In the apportionment of representation in Congress, Utah was given one member under the censuses of 1890 and 1900, and two in 1910.

History.—What is now the State of Utah formed a part of the territory acquired from Mexico in 1848. It was settled in 1847 by Mormons, led thither by Brigham Young. They formed an independent government and called it the State of Deseret—the land of the honey-bee—in March, 1849. This was superseded by a Territorial government, organized by act of Congress, Sept. 9, 1850, under the name of Utah. It then contained over 220,000 square miles, embracing portions of what are now Colorado, Nevada, and Wyoming. In 1856, having a requisite number of inhabitants, the legislature framed a constitution for the "State of Deseret," and application was afterwards frequently made for its admission into the Union, without success till 1896, when it was regularly admitted.

In 1857 an incident occurred that illustrates the wildness of the Territory less than fifty years ago. A party of emigrants going West were attacked by the Mormons and Indians at a place called Mountain Meadow. Many emigrants were killed, others defended themselves bravely. Then two Mormons, named Lee and Haight, offered to help the emigrants eastward if they would follow their guidance.

ON THE SHORE OF THE GREAT SALT LAKE.

This being agreed to, the two Mormons led the men and women into an ambush and killed all but seventeen of them. It was not till 1874 that it became known that the Mormons, and not the Indians, were responsible for this.

As much of the history of the State has already been given in the articles on CHURCH OF JESUS CHRIST OF LATTER-DAY SAINTS (both the parent and Reformed branches); MOUNTAIN MEADOW MASSACRE; and MORMONS, it is only necessary here to refer the reader to them. An echo of the anti-polygamy movement developed in 1903, when an attempt was made to secure the exclusion of Reed Smoot from his seat in the United States Senate on the charge that he was an active polygamist. The agitation was prolonged with much feeling till 1907, when a committee of the Senate, appointed to investigate the charges, reported in his favor, and the Senate decided against his exclusion by a vote of forty-two to twenty-eight.

In 1907 the legislature passed a strong pure food and drug law, an act to preserve the relics of ancient races within the State, and a bill authorizing the appointment of a public-school teachers' retirement commission; and in 1911 sanctioned the issue of \$1,000,000 bonds for a State Capitol, \$260,000 for the construction of roads and bridges, and \$300,000

for the erection and equipment of a main building for the State University.

Ute Indians, a branch of the Shoshone stock of North American Indians, comprising fifteen families, and at one time occupying the central and western portions of Colorado and the northeastern portion of Utah, and extending into New Mexico on the south.

Official reports in 1909 gave 2,014 as the total number on the several reservations, where they are classed under collective terms, as: Wiminuche, 454, at the Fort Lewis school, Col.; Capote and Moache, 352, at the southern Ute school, Col.; and Uinta, 443, Uncompahgre, 469, and White River Ute, 269, at the Uinta and Ouray agency, Ute.

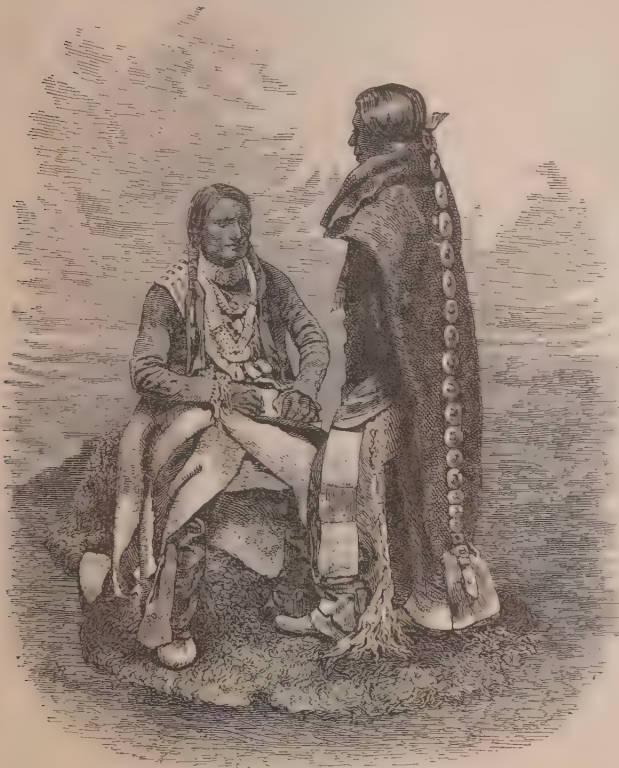

Outbreak of 1879.—There seems to have been no real cause for this outbreak, though some years before the agency business was so grossly mismanaged that the Indians were very discontented. Nathan C. Meeker was appointed agent in 1878, and he was said to be both just and humane in all his dealings with the Indians. The ground of discontent at this time, however, seems to have been a general movement on the part of the white men to reduce the reservation of the Utes. In the spring of 1879 the Colorado legislature passed a memorial to Congress urging the opening of the reservation to white settlement, and the removal of the

UTE INDIANS

Indians therefrom: Of course, there were many white men ready for encroachment, whether it could be legally attempted or not, and many who did not hesitate to threaten the Indians with removal from their lands. Moreover, Mr. Meeker, believing that the wide extent of country used by the Indians for hunting could not be permanently left them, with the tide of immigration pressing so closely

his attempts to enforce the rules he had prescribed only made matters worse. The Indians became more and more unruly, and at last, in July, the agent, feeling that he had lost his power to control the rebellious spirit that had been aroused, wrote to the Indian bureau, begging that troops be sent to quiet the Indians. No attention was paid to his request at first, but at last, in September, an order was

issued for the advance of a body of soldiers, under Major Thornburgh, from Fort Fred Steele to the White River agency "to inquire into the causes of trouble and to check further insubordination." It was intended that the Indians should not know of this advance until the arrival of the troops at the agency, but news of the movement flew on the wings of the wind, as it were, and with it the rumor that the white soldiers were coming to drive the Utes from their lands, and there was an instant uprising throughout the tribe. The advancing cavalry were attacked near the Milk River on the north line of the reservation. Major Thornburgh and

UTE INDIANS.

up to its very borders, endeavored to induce the Indians under his charge to turn their attention to agriculture, supplying them with the necessary implements, and using all the compulsory means allowed him to force them to cultivate the lands. As might have been expected, the spirit of mutiny was aroused immediately. The Indians would not obey Mr. Meeker, and

thirteen of his men were killed, and the rest were forced to intrench themselves as well as they could. Some days later another force under General Merritt reached and rescued them. On the same day that the attack was made on Major Thornburgh the Indians killed Mr. Meeker and the men of the agency. The women and children were taken prisoners, but were

UTE INDIANS—UTRECHT

not harmed and were released a few weeks later. Ouray, chief of the White River Utes, had always professed friendliness to the whites and to Mr. Meeker. He claimed that the attacks had been made without his previous knowledge, and immediately ordered his tribe to stop

Ouray said that he would surrender the responsible actors in the agency murders if they could be taken to Washington for trial. The feeling against the Indians in Colorado was very strong, and had popular sentiment then had any influence in shaping matters there is no doubt that speedy justice would have been visited on the guilty parties. The fact that this would have led to a war in which scores of innocent beings would also have undoubtedly perished, is the justification for the temporizing policy which finally permitted the offenders to escape.

Utica, a city and capital of Oneida county, N. Y.; on the Mohawk River and the Erie Canal; 52 miles e. of Syracuse. It is the centre of a large dairying district, and is the principal cheese market of Central New York. Utica is known as the "City of Charities," because of its numerous charitable institutions, which include a Masonic Home, St. Luke's Homeopathic, and Faxton Hospitals, Home for the Homeless, Home for the Aged, St. Vincent's Protectory, Utica Orphan Asylum, the largest insane asylum in New York State, etc. During the Revolutionary period it was a frontier trading-post and the site of Fort Schuyler. It is a part of the original tract of 22,000 acres which the King granted to William Cosby, the colonial governor, in 1734. Utica was settled by colonists from England and New England. It was incorporated as a village in 1798 and received its city charter in 1832. Pop. (1900). 56,383; (1910) 74,419.

Utrecht, TREATY OF, 1713. This treaty ended QUEEN ANNE'S WAR (*q. v.*). France ceded to England Newfoundland, Nova Scotia, and Hudson Bay territory.

OURAY, CHIEF OF THE WHITE RIVER UTES.

fighting. When General Merritt and his forces arrived at the agency Ouray met him and made such promises for the good behavior of his tribe that no attempt was made to punish those who had made the attack on Major Thornburgh, or the murderers of Mr. Meeker and his assistants, though a peace commission was sent out to investigate the matter, and Chief
